SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF AUGUST 1891.

THE most prominent characteristics of the meteorology of August in Bengal have been—

1. The mean pressure for the month for the whole province has not been very far removed from the normal. Compared with the general pressure over the province, there has been almost throughout the month deficient pressure over the north-west angle of the Bay and the adjacent parts of South-West Bengal This has apparently determined the position of formation of the greater number of barometric depressions during the month, and there has been an almost constant tendency to cyclonic circulation of winds and low pressure over this area.

In Assam also pressure has been slightly in defect of the normal.

2. Temperature has been below the normal by moderate amounts in Orissa and slightly below it in Chutia Nagpur. In all other divisions excess temperature has been registered, the excess usually equalling from half to one degree and being largest in the north of the province.

In Assam also a slight excess temperature has been registered.

3. The strength of the monsoon current has throughout the month been in very considerable defect of the normal.

4. Humidity has been about normal during the month, and cloud proportion has, if anything, been slightly in excess of the normal.

5. No less than four feeble barometric depressions and one cyclonic storm have affected the weather during the month. These have generally advanced in a west-north-westerly direction through the south-western divisions of the province. The cyclonic storm gave general stormy weather in the northern half of the Bay for some days, while the depressions gave only local stormy weather, though one at least gave very bad weather, with hurricane winds at sea, for a few hours.

6. The rainfall has hence been rather abundant and above the normal in the south-western divisions, moderate in amount and rather below the normal in the more central districts, and very light and scanty and largely below the normal in the extreme northern and eastern divisions.

Meteorology of the month.—The meteorological conditions of the early part of August were decidedly disturbed, for on the 31st of July a cyclonic storm of considerable intensity had formed in the Bay of Bengal to the north-west of Diamond Island, and it then commenced to move in a north-westerly or north-north-westerly direction. On the 1st of August the storm was to the west of Akyab in perhaps latitude 19° to 20° N., and longitude 90° to 91° E. It was giving very heavy weather in the Bay, and strong winds were reported to the east and south of the storm. On the morning of the 2nd, the storm centre was nearly over the Sunderbuns between Chittagong and Saugor Island, and it had therefore again advanced in a north-westerly direction. It here suddenly changed the direction of its advance, and during the 2nd moved along the face of the Sunderbuns in a due westerly direction, and passed close to the south of Saugor Island between 8 P.M. of the 2nd and 2 A.M. of the 3rd, and during the passage the very low pressure of about 29·25 inches was recorded. At 8 A.M. of the 3rd, the centre had crossed the coast and was to the west of Balasore, where pressure equalled only 29·293 inches. The storm as it passed over the land was not a very severe one, giving only an ordinary gale of wind, but from reports received from vessels involved in the storm, it appears to have been a decidedly fierce one at sea. On the 4th the storm centre was probably in the west of Chutia Nagpur, and the westerly movement of the 2nd to the 3rd had again been changed into a north-westerly movement, or to the direction it originally had on the 31st to the 2nd. On the morning of the 5th the centre of the small storm was near Sutna, so that it had again advanced in a north-westerly direction; but on this day it appears to have rapidly filled up, and on the morning of the 6th it had practically ceased to exist.

In the passage of the small storm across the head of the Bay, and in its north-westerly advance through the extreme south-western districts of Bengal, rather heavy rain was brought up, first by the storm itself and afterwards by the strong advance of monsoon winds which followed in its rear. The heavy rain was, however, mainly confined to the western and southern divisions of the province, for East and North Bengal during this period received only light and local rain.

From the 5th conditions again began to change at the head of the Bay, and pressure became comparatively low at Saugor Island and Balasore, while round a centre to the west of Saugor Island winds showed a decided tendency to set up a cyclonic circulation. On the 6th a distinct but exceedingly feeble depression existed, partly over the north-west angle of the Bay and partly over South-West Bengal, and the cyclonic circulation became a little more clearly defined. On the 7th conditions were almost the same except that the centre of the circulation of winds was to the south of Saugor Island, and that heavy rain had commenced to fall at that station. The small whirl or depression then commenced to advance in a north-westerly direction, and on the morning of the 8th it was in the south of Chutia Nagpur. On the 9th its centre was between Allahabad and Lucknow, on the 10th it was near Delhi, and on the 11th it had again advanced north-westward and had passed into the low-pressure area over the Indus valley.

Very heavy rain fell, in the passage of this feeble depression through the south-western districts of Bengal, and with the advance of the storm towards the north-west a heavy wave of moisture-laden winds swept over the province and over Northern India generally.

The ordinary monsoon conditions which existed up till the 11th were changed by an inrush of westerly winds on the 11th and 12th, which partly drove back the easterly and south-easterly winds which previously prevailed, and on the 12th a new barometric depression was formed over the land with a centre close to Jessore or between that station and Calcutta. On the 13th the depression had scarcely moved, and it was accompanied by a very complete cyclonic circulation of winds, and was giving very heavy rain; Midnapore and Durbhunga on this day reporting about nine inches of rain. The small storm then moved in a westerly direction, and on the 14th its centre was to the west of Ranchee, while on the 15th it had advanced in a north-westerly direction, and was between Allahabad and Lucknow. On the 16th it was almost in the same same position and was becoming more feeble, and on the 17th it had ceased to exist as a well-defined depression.

This small storm gave heavy rain in its progress, though the winds near the centre were for the most part light; but the monsoon current brought up in its rear was feeble, and from about the middle of the month, therefore, the rainfall was generally rather light and in some districts decidedly local.

It is desirable to notice in connection with this storm that though the centre was formed some 80 or 100 miles inland, and though the wind force at the land stations was light to moderate only, at sea, at the "Intermediate Light-ship," a gale of "hurricane" force was experienced on the 12th, though the gale rapidly subsided.

Conditions were of ordinary light monsoon character up to the 19th or 20th, when another slight but distinct barometric depression, with its accompanying cyclonic circulation of winds, formed in the north-west angle of the Bay. It continued to exist with little or no alteration of intensity or position up till the 23rd, when it moved towards Balasore, gradually filling up in its advance, and on the 24th it was near that station and had become very feeble, while on the 25th it had ceased to exist. This depression brought only light to moderate rain to the districts affected by it, that is, to the south-western districts of the province, and with its disappearance, though the monsoon winds began again feebly to advance over Bengal, yet the rainfall brought up by them was very light, and in some districts from the 27th a very distinct break in the rains set in. On the 28th and 29th the distribution of pressure over the Bay altered very considerably; pressure became very uniform in Bengal and over the Bay, and at this time little or no monsoon current was advancing over the province, so that winds became light and variable, and all the appearances were favourable for a distinct break in the rains.

By the morning of the 31st, however, a distinct barometric depression had been formed in the west of the Bay, the centre of which was to the east of Gopalpore and at some little distance from the coast. This again brought up moderate rainfall to Orissa and to the neighbouring south-western districts, but the remainder of the province was to a great extent rainless.

During the month, therefore, it will be seen, there were no less than four barometric depressions and one cyclonic storm which affected the weather in Bengal. All of them either passed through or influenced only the south-western districts of the province, which have hence received rather abundant rainfall. By the indraught, also, towards these depressions the monsoon current has been drawn away from the eastern and northern divisions of the province, and hence rainfall over these areas has been decidedly light and scanty, and in some cases very local. Thus, while Orissa has received a rainfall approaching half as much again as usual, in North Bengal, on the other hand, the fall has been less than half the normal.

Strength of the monsoon.—As stated in previous monthly reports, the only available method of judging of the strength of the monsoon current is to compare the actual wind velocities at the coast stations and the head of the Bay with the usual velocity for the month. This method of comparison, however, does not, and cannot, take into account the probable variations in the thickness or depth of the current from year to year on which it is probable the heaviness of the rainfall to a great extent depends. It is, however, impossible to measure this. The following table therefore contains the average daily wind movement in miles during August at all the stations on and near the coast of the Bay from Akyab round to Gopalpore, and these figures are compared with the normal wind movement for August:—

STATIONS.	Actual average wind velocity for August 1891.	Normal wind velocity in August.	Variation of actual for August from the normal.
	Miles per day.	Miles per day.	
Akyab	106	120	— 14

Pooree	230	288	— 58
Gopalpore	269	360	— 91

It will be seen that at all the coast stations and at all the stations slightly inland, except Dacca, the wind velocity for August has been much below the normal, the variation at many stations equalling from a fourth to a fifth of the normal value. It would hence appear that the strength of the monsoon in August has been rather largely below the force to be expected in normal years.

Pressure.—The mean pressure of the province for the first week of the month was considerably below the normal, the defect ranging from about 0·03" to 0·04" at the northern stations to almost a tenth of an inch at Saugor Island, Balasore, Midnapore, and False Point. These large defects were of course in connection with the small cyclonic storm which passed across the head of the Bay at this period. In the second week the general defect of pressure only equalled 0·03" to 0·04", but at the stations affected by the second small storm, defects of 0·05" to 0·06" were registered. In the third week the pressure conditions had become reversed, and there was a general excess of 0·03" to 0·04", and the excess was slightly increased during the fourth week, when it equalled about 0·03" to 0·05". These variations have to a great extent neutralized each other, and thus the mean pressure for the month at most stations has not varied from the normal by more than a few thousands of an inch. At a few stations slight excess pressures have been registered, but in the majority of cases the variations shown are defects, and over the north-west angle of the Bay and part of South-West Bengal, or the area where the depressions of the month have been formed, the defects are very noticeable. Thus Saugor Island and Midnapore registered defects of 0·024", Balasore 0·028", Calcutta 0·017", and False Point 0·012". In Assam the mean pressure has been 0·012" in depôt of the normal.

Temperature.—The temperature variations during the month have been unimportant, and have usually followed the variations in the heaviness of the rainfall. In Orissa, where the rainfalls have been heavy, the mean temperature for the month has been in defect of the normal by 0·8°. In Chutia Nagpur, where there has also been heavy rainfall, a defect of 0·1° has been registered, but all other divisions have shown excess temperatures The excess in South-West Bengal and South Behar has been small, and does not exceed half a degree, but in East and North Bengal and North Behar, where the rainfall has only equalled from half to two-thirds of the usual amount, the temperature has been nearly a degree in excess of the normal. For the whole province, however, the mean temperature of the month has only been 0·3° in excess of the normal.

In Assam the mean temperature for the month has been 0·7° above the normal.

Rainfall.—Was large in amount for the first half of the month, but during the second half it became much lighter, and in many districts more local. Owing to the action of the barometric depressions and small cyclonic storm previously described, the rainfall has been mainly deflected towards the south-western districts of the province. Thus Orissa has received an average fall of nearly sixteen inches, which is four and-a-half inches in excess of the normal. Chutia Nagpur has received about twelve and-a-half inches, or a little less than the normal. South-West Bengal has received nearly eleven inches, or about two inches in defect; East Bengal about ten inches, or five and-a-half inches in defect; South Behar nine and-a-half inches, or two inches in defect; North Behar seven and-a-half inches, or more than four inches in defect; and North Bengal only six and a-third inches, or no less than seven and-a-half inches less than usual during August. Calculating the mean rainfall of the whole province for August 1891 as a percentage of the normal fall for the period, the actual fall has only equalled 82 per cent.

The comparison of the actual rainfall in the various large divisions of the province with the normal is most accurately and conveniently shown in the form of a percentage. The figures representing the rainfall for the month, calculated in this way, are included in the table below under the heading of August. This table really gives a condensed summary of the rainfall statistics of the present year up to date for each meteorological division, the first eight divisions giving the actual average rainfalls in each division in each month expressed as a percentage of the normal, while the ninth column gives the total rainfall for the first eight months expressed as a percentage of the normal rainfall for that period:—

METEOROLOGICAL DIVISIONS.	January.	February.	March.	April.	May.	June.	July.	August.	Actual rainfall of first eight months of 1891 expressed as a percentage of the normal fall for the period.
Orissa	11	167	424	:6	134	28	74	139	98
South-West Bengal ...	53	193	308	60	170	61	94	84	99
East Bengal ...	2	311	98	180	151	71	100	65	95
North Bengal ...	78	377	239	77	140	53	117	46	88
North Behar ...	171	233	590	19	172	94	83	65	94
South Behar ...	253	150	784	30	165	88	86	83	101
Chutia Nagpur ...	163	91	506	30	148	47	97	93	98

It will be seen that there has been a very serious deficiency of rainfall in August in North Bengal, where the defect equals 54 per cent., and a rather less serious deficiency in East Bengal and North Behar, where the defect is 35 per cent. South-West Bengal, South Behar, and Chutia Nagpur have received fairly normal falls though still in defect,

but in Orissa an excess fall of 39 per cent. is registered. For the whole year up to the end of August the rainfall in all divisions except North Bengal has been within about five per cent. of the normal amount, but in North Bengal there has been a defect of 12 per cent.

The variations in the amounts of rainfall in different districts of the province is very large, and thus at some of the stations in Chutia Nagpur and Orissa, at Saugor Island and at Cox's Bazar, and at some stations in the Darjeeling Hills, falls of about 20 inches and upwards have occurred; while, on the other hand, over a large part of North Bengal falls of only from three to five inches have been recorded. The greater part of the province has, however, received more than ten inches of rain in the month. Compared with the normal, it may be roughly said that if a line is drawn in a north-westerly direction from the middle of the Sunderbuns to Buxar, the whole of the country to the south and west of this line has received rainfall in excess of the normal, and to the east and north of this line the falls have been in defect. The defects over part of North Bengal exceed ten inches of rain, and at some stations even exceed twenty inches, while in South-East Bengal also some stations show defects of ten and fifteen inches. The greater part of the area showing defective rainfall is from three to six or seven inches of rain short. On the other hand, a considerable area in the south of the province has received a fall more than five inches in excess of the usual amount.

The following table gives full data for the comparison of the actual and normal rainfall of the month of August in all districts of the province. The figures are derived from the average and actual rainfall of the rain-recording stations in each district, due allowance or weight being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the weekly and monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past fifteen years; the second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in each district; the third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage; the fourth column states as a percentage how much the district rainfall of the month varied from the normal:—

Percentage Table for August 1891.

Division.	District.	Normal district rainfall for August.	Actual district rainfall for August 1891.	Percentage of actual to normal rainfall.	Percentage excess (+), defect (−).

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last . The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 12th of September 1891.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Rainfall. Of week. Mean for district.	Of week. Normal mean. Explanation.—......indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 15*th September* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING SATURDAY, THE 12TH OF SEPTEMBER 1891.

AT the close of the previous week a small barometric depression had formed in the north-west angle of the bay, and with some very heavy rainfall which was reported on the morning of the 5th, the depression intensified, and on that day a very distinct but rather small storm existed near the Sandheads; the small storm being accompanied by the usual cyclonic circulation of winds, though the wind force was light. The depression was then beginning to move in a westerly or west-north-westerly direction, and on the morning of the 6th its centre was to the south-west of Balasore or between that station and Cuttack. In its westerly advance it again gave heavy rain to Orissa, and moderate rain to some parts of South Bengal and Chutia Nagpur, but Behar and North Bengal, and a considerable part of East Bengal, were almost rainless. The small storm then again advanced in a west-north-westerly direction, and on the morning of the 7th it was advancing towards the North-West Provinces; on the 8th it was near Nowgong, where it remained almost unchanged on the 9th, and on the 10th it again passed on north-westward and was between Agra, Jhansi, and Jeypore, but it had become very feeble and was of little importance on that day. Though the storm was of moderate or slight intensity as it passed in its north-westerly course, and though it gave fairly heavy rain in the Central and North-West Provinces, yet the monsoon current which flowed over Bengal in its rear was very feeble, and was mainly confined to the south-western districts of the province, so that rainfall was only received in Orissa, Chutia Nagpur, South-West Bengal, and parts of South Behar, the remainder of the province continuing almost rainless. Conditions, therefore, remained of very light monsoon character generally in Bengal up to the 9th, when pressure became decidedly uniform over the Bay, and the tendency to low pressure in the north-west angle of the Bay, as represented by such stations as Saugor Island and Balasore, which has been such a prominent feature during the present monsoon, was again reproduced. This had developed slightly on the 10th, and a cyclonic circulation of winds also set up, though the wind force was feeble. On the 11th a very distinct barometric depression existed with a centre to the south-east of Saugor Island, and on the 12th the centre of the small storm had passed inland, crossing the coast near Balasore, and was a little to the north-west of Balasore and to the south-east of Chybassa. These conditions were again favourable for rainfall in Orissa and in the south-western districts of Bengal, and rain was reported generally on the 11th and 12th, and on the second day in particular some very heavy falls were reported, Cuttack having received 9·81 inches, Kendrapara 6·77 inches, False Point 4·19 inches, etc.

It will thus be seen that conditions during the week have been favourable for extremely heavy rain in Orissa and for moderate rain in South-West Bengal and Chutia Nagpur, and to a smaller extent in South Behar. On the other hand, throughout the week the conditions have been extremely unfavourable for rainfall in North Behar and North Bengal, and to a great extent also in East Bengal.

Pressure—Was generally very decidedly below the normal at the close of the previous week, and, with the inland advance of the small storm, pressure fell rapidly on the 6th, a fall exceeding a tenth of an inch being reported at False Point and Cuttack, though the fall was smaller elsewhere. A rapid rebound took place on the 7th, which continued on the 8th and 9th, but on the 10th pressure again began to fall slowly. The fall continued on the 11th in the south-western districts, though pressure was rising elsewhere, and the same was the case on the 12th, and on this day for the first time during the week the pressure over the greater part of Bengal became nearly normal in amount or slightly above it, except over the area in the west, south, and south-west of the province which was affected by the barometric depression. For the whole week, therefore, the mean pressure of the province has been below the normal, the defect ranging from about 0·07" at such stations as Saugor Island, Balasore, and Midnapore, to an almost normal pressure over parts of North Bengal. The mean defect of the province has equalled about 0·04." In Assam pressure has been in defect of the normal by 0·034", but the defect has been largest at Sibsagar, where it has equalled 0·056."

Temperature.—Owing to the almost complete absence of rain over a considerable part of the province, temperature has generally been rather largely in excess of the normal. Thus in North Behar and North Bengal the mean temperature has been from two to two-and-a-half degrees above the normal; in East Bengal and South Behar the excess has been between one-and-a-half and two degrees; while in South-West Bengal and Chutia Nagpur it has equalled half a degree. In Orissa, on the other hand, where there has been very heavy rainfall, temperature is 1·3° below the normal. For the whole province the mean temperature has been 1·1° in excess of the normal. In Assam also temperature has been above the normal, the excess equalling 1·9.°

Rainfall.—The stations in Orissa have received an average amount of no less than 6·00 inches of rain during the week, or 3·43 inches in excess of the normal fall. In all other divisions, however, the falls have been either largely or very largely in defect; Chutia Nagpur has received an average fall of 1·38 inches, which is, however, more than an inch less than usual;

and in South-West Bengal the fall has averaged 1·28 inches, or 0·84 inch less than usual. In South Behar the average fall has been less than an inch being only 0·89 inch, and this is no less than 1·23 inches in defect. In East Bengal an average fall of only 0·60 inch is recorded, which is 1·86 inches less than usual. In North Bengal and North Behar rainfall may almost be said to have been absent, for North Bengal only received 0·25 inch as against a normal fall of 3·03 inches, or about a twelfth of the usual amount, and in North Behar the actual fall has only averaged 0·13 inch, the normal fall being 2·46 inches, or only one-nineteenth of the usual amount.

Indeed, the following districts have received such small amounts of rain during the week that they may be said to have been rainless:—Bogra, Maldah, Rungpore, Purneah, and Chumparun; while exceedingly light falls only have been received in Tipperah, Mymensingh, Dacca, Pubna, Rajshahye, Dinagepore, Julpigoree, Mozufferpore, Durbhunga, and Gya.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 12th of September 1891:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1891.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

METEOROLOGICAL OFFICE, BENGAL,
The 15th September 1891.

A. PEDLER,
Meteorological Reporter to the Govt. of Bengal.

MEMORANDUM.

Report on the Monthly Statistics of Deaths registered in forty-five districts of Bengal for the month of June 1891.

THE total number of deaths registered in forty-five districts of Bengal during the month of June 1891 amounted to 140,594, against 115,004 in June 1890, and an average of 105,717 in the corresponding month of the previous five years, 1886—90. These figures represent an annual death-rate of 25·56, 20·88, and 19·20 per 1,000, respectively, of the aggregate population of those districts, which is 65,859,534. The death-rate of June 1891 is 6·36 higher than the mean rate of the corresponding months of the past five years, 1886—90, and is also higher than the rate of the corresponding period of any of the past five years with which comparison is made, *vide* the figures below:—

	June 1886.	June 1887.	June 1888.	June 1889.	June 1890.	Monthly average of five years, 1886—90.	June 1891.
Number of deaths	87,815	112,120	104,987	108,059	115,004	105,717	140,594
Ratio per mille per annum	15·96	20·40	19·08	19·68	20·88	19·20	25·56

From the following table it will be seen that the mortality-rate during June 1891 is less than the previous months of the year except February and May 1891:—

Months.		*Number of deaths.*	*Ratio per mille.*
January 1891	... ...	143,492	26·04
February „	... ...	137,553	24·96
March „	... ...	168,185	30·60
April „	... ...	161,980	29·52
May „	... ...	125,975	22·92
June „	... ...	140,594	25·56

The following table exhibits the death-rates among the different sexes and the several classes of the community which comprise the population of the Bengal Province. As usual, the mortality is greater on the whole among the male than among the female population; 119 males died for every 100 females, calculated on the proportion such mortality bears to the total male and female population; but, individually considered, in only one district, viz., Darjiling, the death-rate among females is greater than that of males. Proportionally to population the death-rate among the Buddhists is greater than among the Hindus, other classes and Mahomedans, and Christians suffered the least:—

	Sexes.			Classes.				
	Males.	Females.	Ratio of male deaths to every 100 female deaths, calculated on the proportion such mortality bears to the total male and female population.	Christians.	Hindus.	Mahomedans.	Buddhists.	Other classes.
Number of deaths	76,039	64,555	...	121	97,877	39,165	201	3,230
Ratio per mille per annum ...	27·84	23·28	119	14·88	27·48	22·08	30·24	23·16

In the following table are given the death-rates registered during the month of June 1891, which are above 25 per mille and are arranged in order of sequence from highest to lowest, and are compared with that of the corresponding month of 1890:—

Districts.	Ratio per *mille* during— June 1891.	June 1890.	*Districts.*	Ratio per *mille* during— June 1891.	June 1890.
Darjiling	70·44	46·32	Lohardugga	30·96	20·04
Julpaiguri	47·88	33·00	Noakhali	29·28	29·52
Shahabad	41·28	20·88	Sarun	28·56	22·20
Durbhanga	39·84	26·52	Mozufferpore	28·44	22·32
Monghyr	38·64	29·28	Chittagong	28·08	20·16
Bhagulpore	37·92	22·68	Purneah	27·00	16·92
Gya	35·04	22·32	Maldah	26·88	18·60
Patna	32·28	36·48	Birbhum	25·68	19·32
Hazaribagh	32·04	19·44	Manbhum	25·44	20·64

The maximum death-rate was registered in Darjiling, 70·44 per mille, and the minimum in Faridpore, 14·28. In Darjiling fever and dysentery and diarrhœa are accountable for the high death-rate, 487 deaths from the former and 193 from the latter having been registered out of a total of 915. Judging by the results shown in the statement appended to this memorandum, it will be seen that in eighteen districts the death-rates were above 25 per mille, in twelve between 20 and 25; and in the remaining fifteen below 20. In those districts which returned death-rates below 20 per mille, registration of deaths cannot be said to have been satisfactorily carried on.

The following table shows the total mortality during the month under review from each of the several specified causes contrasted with the mortality from those causes in the corresponding month of 1890 and the average of the previous five years 1886—90:—

	Ratio per *mille* during—		
	June 1891.	June 1890.	Monthly average of five years 1886—90.
Cholera	3·24	2·40	2·52
Small-pox	·24	·24	·12
Fever	17·16	14·40	12·60
Dysentery and diarrhœa	·60	·48	·60
Injury	·72	·60	·60
Other causes	3·24	2·52	2·40

The only noticeable point in connection with the above table is that the death-rate of June 1891 under the heads cholera and fever, is higher than that of the two past periods with which it is compared.

Cholera caused 18,306 deaths, which is equivalent to an annual rate of 3 24 per 1,000 of population, against 26810 (ratio 4·80 per mille) in the previous month. The highest cholera death-rate occurred in Shahabad, 17·28 per mille per annum, then in Durbhanga 14·28, Julpaiguri 10·68, Darjiling 10·56, Bhagulpore 9·36, Monghyr 8·76, Gya 7·56, Sarun 5·88, Patna and Mozufferpore 5·04 each, Purneah 4·68, Mymensing 3·36, Rungpore 3 24, Hazaribagh 2·76, Maldah and Sonthal Pergunnahs 2·52 each, and in Lohardugga 2·40. In only one district, Singbhum, there were no cholera deaths recorded.

Small-pox proved fatal in 1,826 instances (ratio ·24 per mille), against 1,967 (ratio ·24) in the preceding month. Midnapore returned the highest death-rate, 2·28 per mille per annum, then Cuttack with a death rate of 1·92 per mille, followed by Lohardugga with 1·44 per mille. In nine districts, viz., Birbhum, Serampore, Murshedabad, Rajshahye, Rungpore, Darjiling, Julpaiguri, Backerganj, and Tipperah, the disease was entirely absent.

Fever was accountable for 94,634 of the total deaths (ratio 17·16 per mille) and *dysentery and diarrhœa* for 3,332 (ratio ·60 per mille), against 77,357 (ratio 14·04) and 2,727 (ratio ·48), respectively, in the previous month. All the districts returned deaths under both heads but the highest fever death-rate occurred in Darjiling, viz., 37·44 per mille per annum, then in Julpaiguri 35·88 per 1,000, in Noakhali 26·40, in Monghyr 24 60, in Chittagong 23·88, in Bhagulpore 23 88, in Hazaribagh 23·64, in Shahabad 22·68, in Maldah 22·44, in Gya 22·32, in Rajshahye 21·60, in Purneah 21·48, in Dinajpore 21·36, and in Durbhanga 21·24. Darjiling also returned the highest death-rate from dysentery and diarrhœa, 14·88 per mille, followed by Balasore, 3·12 per mille.

Injury caused 4,083 deaths (ratio ·27 per mille), against 2,570 (ratio ·36) in the month before, and the mortality from *all other causes* not specified amounted to 18,413 (ratio 3·24 per mille), against 14,544 (ratio 2·64) in the previous month. Poori returned the highest death-rate from the unspecified diseases coming under the head "All other causes," viz. 13·68 per mille per annum.

With regard to mortality according to *Age*, infants under one year of age, as usual, perished in the largest numbers, viz., at the rate of 181·32 per 1,000 of population per annum; next came old persons (60 years and upwards) with a death-rate of 55·80 per 1,000. The lowest death-rate occurred among persons between 10 and 15 years of age, viz., 12·72 per 1,000 per annum.

Detailed information regarding the mortuary statistics of the forty-five districts of Bengal during the month under review will be found in the statement appended.

W. H. GREGG, *Dip. Publ. Health, Camb.*,
Sanitary Commissioner for Bengal.

The 14*th September* 1891.

Statement showing the Results of the Registration of Deaths in the Districts in Bengal for the month of June 1891.

OFFICE OF SANITARY COMMISSIONER FOR BENGAL,

The 14th September 1891.

W. H. GREGG, *Dip. Publ. Health, Camb.*,

Sanitary Commissioner for Bengal.

MEMORANDUM.

Weekly statistics of births and deaths in twenty-seven of the principal towns of Bengal for the week ending with Saturday, the 29th August 1891.

Births.

The total births registered during the week ending with Saturday, the 29th August 1891, in twenty-seven principal towns of Bengal, amounted to 482, and correspond to an annual rate of 23·4 per 1,000 of the aggregate population of those towns, which is 1,072,359. This rate is 2·4 higher than the average rate of the corresponding week of the past five years, and is also higher than the rate of the corresponding week of any of the past five years with which comparison is instituted, *vide* the figures below—

	1886.	1887.	1888.	1889.	1890.	Weekly average of five years, 1886—90.	1891.
Ratio of births per 1,000 of the population per annum	22·5	19 9	21·3	22·6	18·8	21·0	23·4

The births registered in each of the last four weeks in each of the twenty-seven principal towns correspond to the following rates per 1,000 of the population:—

Towns.	Weeks ending— 8th August 1891.	15th August 1891.	22nd August 1891.	29th August 1891.	Towns.	Weeks ending— 8th August 1891.	15th August 1891.	22nd August 1891.	29th August 1891.

					Total ...	22·5	18·7	25·4	23·4

It will be seen that last week the highest birth-rate was returned from Arrah (43·1) and the lowest from Narainganj (8 3). No births were registered during the week in the Jessore town.

Deaths.

The total deaths registered during the week under review amounted to 609, and correspond to an annual rate of 29·5 per 1,000 of the population. The rate of the week is 1·2 higher than the average rate of the corresponding week of the past five years, and is also higher than the rate of the corresponding week of any of the past five years except 1888, *vide* the figures below—

	1886.	1887.	1888.	1889.	1890.	Weekly average of five years, 1886—90.	1891.
Ratio of deaths per 1,000 of the population per annum	29 2	27·9	34 9	27·0	22·6	28·3	29·5

The deaths registered in each of the last four weeks in each of the twenty-seven principal towns correspond to the following rates per 1,000 of the population:—

Towns	Weeks ending— 8th August 1891.	15th August 1891.	22nd August 1891.	29th August 1891.	Towns.	Weeks ending— 8th August 1891.	15th August 1891.	22nd August 1891.	29th August 1891.

Dacca	19·5	16·2	12·3	23·4					
					Total ...	34·8	28·4	37·1	29·5

According to the figures returned, the highest mortality occurred in the town of Hughli and Chinsurah (55·8) and the lowest in Santipore (7·).

Measured by last week's mortality, the highest annual death-rates from the several registered death-causes occurred in the following towns :—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*	*Dysentery and diarrhœa.*	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Monghyr ...	24·4	Rampore Beauleah	42·0	Poori ...	12·6	Chupra ...	24·2
Mozufferpore ...	15·8	Darjiling ...	29·6			Hughli and Chinsurah ...	18·1
Chupra ...	13·1	Hughli and Chinsurah ...	29 5			Poori ...	16·8
Gya ...	10·9	Gya ...	28·0			Chittagong ...	16 4
Arrah ...	8·3					Serampore ...	15·7
Patna City ...	5·8						

The total mortality from the several registered death-causes in the twenty-seven principal towns amounted to 4·9 from cholera, against 6·2 in the preceding week; ·1 from small-pox, against ·01; 12·3 from fever, against 12·7; 2·7 from dysentery and diarrhœa, against 3·7; ·5 from injury, against ·8; and 9· from other causes, against 7·6 in the preceding week.

The mortality of last week according to *Sex*, *Class* and *Age* was as follows :—

According to Sex.	Ratio per *mille.*	*According to Class.*	Ratio per *mille.*	*According to Age.*	Ratio per *mille.*
Males	29·2	Christians ...	14·9	Under 1 year ...	253·7
Females	29·9	Hindus ...	29·5	1 and under 5 years ...	63·7
Ratio of male deaths to every 100 female deaths, calculated on the proportion such mortality bears to the total male and female population...	97	Mahomedans ...	30·2	5 „ 10 „ ...	21·0
				10 „ 15 „ ...	19 9
				15 „ 20 „ ...	19 7
				20 „ 30 „ ...	17·1
				30 „ 40 „ ...	15·6
				40 „ 50 „ ...	21·4
				50 „ 60 „ ...	19·3
				60 years and upwards ...	63·4

Detailed information regarding the vital statistics of the twenty-seven principal towns dealt with in the above review will be found in the statement appended.

W. H. GREGG, *Dip. Publ. Health, Camb.*,
Sanitary Commissioner for Bengal.

The 14*th September* 1891.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending with Saturday, the 29th August 1891.

RESOLUTION ON THE ANNUAL GENERAL ADMINISTRATION REPORT OF THE BHAGULPORE DIVISION FOR THE YEAR 1890-91.

GENERAL DEPARTMENT—MISCELLANEOUS.

Darjeeling, the 15th September 1891.

RESOLUTION No. 1092.

READ—

The Annual General Administration Report of the Bhagulpore Division for the year 1890-91.

Tours.

The Commissioner, Mr. C. C. Quinn, spent altogether 100 days on tour, and visited the head-quarters of every district but six only of the 12 sub-divisions of his jurisdiction. His attention will be drawn to the necessity of inspecting all sub-divisions. The station of Rajmehal was twice visited, but, owing to other work of a special nature, no regular inspection of the office or sub-treasury was made. The District Officers made useful tours, in nearly every case exceeding the minimum of 90 days prescribed by Government, during the course of which all the sub-divisions were visited and inspected. Mr. Waller's failure to make a tour of at least the prescribed duration in the Monghyr district should have been explained, but was probably due to ill-health. In the Sonthal Pergunnahs the tours of both the Commissioner and the Deputy Commissioner were chiefly employed in supervising the settlement operations and in making enquiries into the alleged dissatisfaction and excitement among the Kharwars, who constitute the radical party of the Sonthals. Mr. Bright, Officiating Deputy Commissioner, was in the interior for 176 days up to the 10th March 1891, when he was relieved by Mr. Carstairs on the return of the latter from leave. Altogether the tours of the officers in charge of this district reached the very satisfactory figure of 186 days.

All the Sub-divisional Officers completed the full term laid down, much of their attention being devoted to the conduct of the census operations.

Material condition of the Division.

2. The year was marked by an unusually heavy rainfall, but unevenly distributed, the fall in February and March being excessive and resulting in considerable damage to the rabi crops. The bhadoi crop also suffered somewhat from heavy rain and the early rise of the rivers, but the rice gave an excellent outturn, and, from the point of view of the condition of the people generally, the year is reported to have been one of at least average if not of unusual prosperity. The general improvement in the health of the people, as shown by the mortality returns, is attributed by the Collector of Bhagulpore to the scarcity of the previous year having passed away, and the reduction in the recorded mortality in other districts may doubtless be ascribed to the same cause. Where the population live to so great an extent on the margin of subsistence, a rise or fall in prices has a very serious significance for the poorer classes. The total deaths registered declined from 63,308 to 54,036, the decrease in fever mortality from 49,055 to 40,108 being most observable. Influenza left its mark in this division as elsewhere. The only disease which showed an increase was cholera, owing to an epidemic in Monghyr and the northern part of the Bhagulpore district. Attention should be paid to registration in the Sonthal Pergunnahs, where the reported death-rate is only 15·70 per thousand of the population. The assertion that the people of the Division are now fairly protected against small-pox is remarkable, and before it can be accepted, other evidence must be brought beyond the fact that the number of deaths from that disease fell from 435 in the previous year to 98 only.

Emigration.

3. Emigration from the Bhagulpore Division is inconsiderable, with the exception, perhaps, of the Sonthal Pergunnahs district, the Deputy Commissioner of which records a strong protest against the misconduct of the arkatis or agents employed to entice people away to Assam. Twenty-five cases against recruiters appear to have been prosecuted in the sub-divisions of Jamtara, Pakour, Deoghur and Dumka, but the prosecutions were only successful in eight out of these cases. The Deputy Commissioner seems to be very ready to believe that the intending emigrant, who afterwards changes his mind, was necessarily deceived at first by false representations; and he advocates a system by which the gardens should establish respectable agents, who would deal at first hand with the labourers and make advances to the coolies themselves, instead of to low crimps and arkatis. The services of the latter are certainly undesirable, but the trade is one which seems to be incompatible with a high standard of morality. It would no doubt be an excellent thing if there existed a body of respectable agents, who would see the coolies properly conducted to the gardens, paying all expenses and looking after them on the way; but it is doubtful whether any such system could be carried on to the profit of the agents, and also of the gardens. The revision of the Emigration Act of 1882 is still under the consideration of the Government of India, and, pending its decision, all that can be done is to spare no endeavours to bring offending arkatis to justice under the criminal law.

Manufactures, Trade, &c.

4. The tables given in Appendices V (A to E) of the report show a good progress in the outturn of nearly all articles of manufacture in the Division. Indigo, however, shows a decrease in the districts of Maldah and the Sonthal Pergunnahs. The figures cannot be shown here in one statement for the whole Division, as some districts have shown only the weight and others only the value of the outturn. Where separate district tables are given to illustrate the same subject, the Commissioner should ensure that the statistics are presented, as far as possible, in a similar form, so as to admit of ready comparison. In Purneah the value of indigo manufactured increased from Rs. 5,90,396 to Rs. 7,55,165, but this latter figure is very far short of the value produced in 1888-89. In Monghyr the outturn of saltpetre rose from 1,586 to 6,827 maunds owing to the appointment of a Superintendent of Customs to prevent illicit manufacture. In the same district the manufacture of molasses increased from 1,661 maunds to 21,836, and that of ghee by over 100 per cent. In Purneah the outturn of gunny pieces and raw sugar increased by over 50 per cent., and in Bhagulpore that of tusser silk by over 25 per cent.

Country cloth in Purneah also showed a very satisfactory increase in value from Rs. 10,685 to Rs. 29,085. The industries of *bidri* work and the manufacture of satranjis in this district are said to be decaying. The only mine of importance in the division is the Madankata coal mine in the Sonthal Pergunnahs. This mine employed a daily average of 700 men, 150 women and 80 children, and produced 35,344 tons of coal. Trade in the Purneah district was more than usually brisk owing to good harvests and to the opening of the Railway and of new stations at Anchraghât and Debigunge. The traffic is said to have developed so rapidly that the rolling-stock proved quite inadequate, the result being blocks and delays even up to the end of the year. It is doubtful whether there will ever be much interchange of traffic between this and the Tirhoot State Railway, as long as the obstacle of the difficult Kosi ferry is interposed.

Crime and Justice.

5. The Lieutenant-Governor notices a great want of statistical information throughout the report, and more than elsewhere under the headings which deal with crime and civil and criminal justice. Under crime no figures are given for the districts, and very few for the Division. The total of cases both cognizable and non-cognizable showed a slight decrease of 1,257. Efforts were made in Purneah to bring about a decrease of dacoity by negotiations with Nepal and by inducing the people to warn each other at the approach of dacoits by means of fires and bombs. The Lieutenant-Governor when at Purneah was given to understand that these measures had been successful, and that no cases of dacoity had occurred since their adoption; but the report now submitted contains statements inconsistent with the information then furnished to His Honour. Burglaries show a satisfactory decrease throughout the Division.

Under the heads of criminal and civil justice no figures whatever have been given. The review of criminal justice of the year is in fact almost confined to a somewhat sweeping condemnation of the Bench system, the working of which has certainly not been good. The Lieutenant-Governor believes that more might be done both in selecting suitable gentlemen for Honorary Magistrateships in the first instance, and in inducing them to attend regularly when appointed. It is hard to believe that in a district like Maldah "the class of men with leisure and brains to make competent Honorary Magistrates is entirely wanting." Civil cases are said to have shown a decrease in suits for money and moveables, and in rent suits in the Bhagulpore and Maldah districts. In the Sonthal Pergunnahs the decrease in civil suits has been general.

Land Revenue Administration.

6. Figures are given showing the total number of estates and the demand and collections for the year under report and the previous year under four classes, but no explanation is given as to what these four classes represent. His Honour presumes that the classes I to IV in paragraph 107 are meant to be the same as the fourfold division of estates in the Board's Annual Land Revenue Report, viz. class I, permanently-settled estates; class II, temporarily settled; class III, Government estates, and class IV, ryotwari tracts, as there is no indication that any other classification has been adopted; but it would have been more convenient if this had been explained in the report, and if the figures had been combined in one statement showing together the demand and collections for each class and for each district of the Division. The divisional figures given are as follows :—

	Number of estates.		Demand.		Collections.	
	1889-90.	1890-91.	1889-90.	1890-91.	1889-90.	1890-91.
			Rs.	Rs.	Rs.	Rs.
Class I. Permanently-settled.	13,948	14,009	30,23,863	30,23,806	28,72,387	29,86,701
Class II. Temporarily-settled.	67	67	50,2[illegible]5	50,283	39,753	47,713
Class III. Government estate.	192	196	49,806	53,734	34,132	32,824
Class IV. Ryotwari tracts.	5	5	2,37,318	2,34,177	2,14,373	2,10,452
Total ...	14,212	14,277	33,61,187	33,62,000	31,60,645	32,77,690

The above statement would be improved by the addition of columns showing the arrear demand and the arrear collections for each district, and the percentages of the collections on the arrears and on the demand. The percentage of the current collections on the current demand showed a satisfactory rise from 94·03 to 97·47, and the percentage of the total balance on the total demand a similar decrease from 6·2 to 2 5. Current and arrear collections together amounted to 97·3 on the total demand.

In the large Government estate of the Damin-i-koh in the Sonthal Pergunnahs the percentage of current and arrear collections on the total demand declined from 99·45 in the two preceding years to 98·4.

Partitions.

7. Monghyr is reported to be the only district in which the Partition Act is worked to any extent. The results obtained are very discreditable. The district is provided with a Special Deputy Collector, Babu Banku Behari Baxi, for this particular work; but in spite of this the number of cases left pending at the close of the year increased from 104 to 127, while only 25 cases were disposed of as against 50 in the previous year. It appears, however, from a report submitted by the Board on the subject, that the Special Deputy Collector was not altogether responsible for this state of things, as some of the cases were delayed in final disposal owing to the illness of the officer in charge of the district during the year.

Wards' estates

8. Out of the six estates which were under the management of the Court of Wards during the year, the balances of three, viz., Lugmah, Srinagar, and Rohini, are observed to be unduly large. The Lugmah estate is said to be in a very impoverished condition, but this is all the more reason why it should not show an outstanding balance of Rs. 5,303 against a demand of Rs. 20,575 only. The estate of Sankora, where Rs. 14,344 were collected out of a demand of Rs. 14,345, is a specimen of how collections can and should be made.

Revenue other than Land Revenue.

9. There is nothing remarkable in the excise administration of the year. Stamp receipts show an increase of Rs. 63,158, namely, from Rs. 11,09,358 to Rs. 11,72,516, while the charges decreased. The increase was most marked in the case of non-judicial, postage, and miscellaneous stamps, while court-fees showed a decrease of over Rs. 10,000.

The prosecution of cases under the Stamp law was very successful, 47 persons having been convicted in 32 cases as against two persons acquitted.

Under the Income-tax Act, out of an assessment of Rs. 2,35,870, Rs. 2,27,705 were realized. The large balance is said to have been chiefly due to late assessments in the Purneah district.

Education.

10. There has been an increase in the number of pupils both in public and private institutions, but, for some reason not explained, this increase has been accompanied by a very decided decrease in the number of schools of each class. The increase of pupils in the public schools has, moreover, not been large, being only from 93,947 to 94,538, or slightly over ·6 per cent, while in the number of schools there was a loss of 235 out of 5,293 or about 4½ per cent. In Bhagulpore and Purneah there was a decline in the number of primary schools and in the number of pupils taught therein.

The Lieutenant-Governor notices with satisfaction the advance made in female education, the number of girls' schools having increased by 31 with 395 pupils, while 2,161 girls attended boys' schools as against 1,932 in the preceding year. Mohammedan education is also prospering, the percentage of Mohammedans on the school population being in excess of the percentage of Mohammedans on the total population The percentage of aborigines to the school population has fallen slightly, being now only about 6·3.

Dispensaries.

11. The report shows that 25 dispensaries were maintained during the year under the supervision of Government officers. A list of these is furnished, but no statistics are given as to the work which they have done during the year, nor as to the cost of their maintenance. The Commissioner merely observes that, "as in previous years, the dispensaries rendered good service, and that in most of them the number of patients treated was larger than in the previous year, although there was less sickness" In future reports detailed figures should be given.

It is also stated that most missions in the Sonthal Pergunnahs maintain dispensaries, but no clue is given as to the number of such non-official institutions.

Dispensaries are maintained at Bhagulpore and Champanagore under the superintendence of a Lady Doctor whose name is not mentioned in the report.

Zemindari dâk.

12. The rates show very great variations in the several districts, and there have moreover been some slight changes of rate in individual districts since the preceding year. The question of fixing the rate for each district for a term of years, instead of leaving it liable to alteration each year, as it at present is under the Act, is now under the consideration of Government.

Public feeling, conduct of zemindars, &c.

13. A slight uneasiness among the Kharwars of the Sonthal Pergunnahs has already been alluded to. The reports at first received proved to be exaggerated, and confidence was ultimately restored by the Officiating Deputy Commissioner, Mr. Bright, who acted with vigour and judgment throughout Mr. Carstairs' complaint that the constant changes of officers have wasted Government influence in the Rajmehal sub-division appears to be out of place in this particular year, inasmuch as Mr. Ainslie was in charge of the sub-division during the year. The census operations were conducted with smoothness both in the Sonthal Pergunnahs and in the regulation districts of the Division. Ignorant rumours as to the intention of the proceedings were as usual current at times, but they led to no serious results, except in one case, where a stranger was murdered in Bhagulpore during an excitement produced by a cry that child-snatchers were abroad in order to obtain a sacrifice for bridging the Kosi. The Lieutenant-Governor observes with pleasure the high terms in which the conduct of the zemindars of the Bhagulpore district is referred to in connection with the census. On the other hand, it is to be regretted that no Collector has been in a position to omit a list of zemindars whose conduct in relation to their tenants has not been entirely satisfactory. The list given by the Collector of Maldah is formidable, and it is significant that they were mostly absentee landlords. The names included are in some cases those of individuals who have constantly attracted the favourable notice of Government, and the Collector would do well in such instances to draw their attention to any trouble caused by their local agents.

14. The Lieutenant-Governor desires to thank Mr. C. C. Quinn for his administration of the Division throughout the year. Mr. Wace's work as Magistrate and Collector of Bhagulpore has again been very favourably noticed. The testimony borne by the Commissioner to the merits of Mr. Samuells, Mr. Carstairs and Mr. Bright will be duly recorded in the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

RESOLUTION ON THE GENERAL ADMINISTRATION REPORT OF THE RAJSHAHYE DIVISION FOR THE YEAR 1890-91.

GENERAL DEPARTMENT.—MISCELLANEOUS—No. 1094.

Darjeeling, the 19th September 1891.

READ—

The General Administration Report of the Rajshahye Division for the year 1890-91.

Mr. Lowis held charge of the division throughout the year. In several of the districts there was no change in the District Officer, and on the whole there was more continuity of administration than it is generally possible to secure. The Commissioner was on tour during 142 days, and did good work, especially in connection with the important settlement of land revenue in progress in the Western Dooars. Certain of the sub-divisions are named as having been inspected by Mr. Lowis, but the Lieutenant-Governor would have been glad to have had it distinctly recorded that he had visited them all.

Tours and inspections.

2. All the District Officers were on tour for the prescribed period of 90 days, except the Collector of Rungpur, who fell short by four days. His explanation, based on the census operations, is insufficient, as the same excuse might have been put forward in every district, and the date and work it would entail were known long beforehand. The Sub-divisional Officers also did their duty in this respect except Mr. Montriou of Alipore in Jalpaigori, who was only four days in camp during five months. The Deputy Commissioner should have been aware of this neglect of duty and applied an immediate remedy. It is essential that all officers should do part of their touring throughout the year, and not leave it to the officers in charge during the cold weather to do the whole. In their inspections of offices and treasuries, the District and Sub-divisional Officers conformed generally with the standing orders, but the Deputy Commissioner of Darjeeling has not a heavy worked office, and must be required to make his inspections half-yearly in future, and the Commissioner should look into the sub-divisional treasuries as well as the offices.

Weather and crops, Public health, &c.

3. The rainfall was unusually heavy during the year in every district; the consequent high floods damaged the lowland crops in Rajshahye, Pubna, Bogra and Rungpur. The cattle and the communications also suffered. On the whole, the amun rice, which is the principal staple of the division, was as good as in the preceding year. The jute outturn was above the average; its cultivation was so much overdone in Rungpur that the fibre was hardly saleable. Indigo, sugarcane and tea were all affected unfavourably by the excessive rainfall. Owing to the ravages of an insect, the average yield of ganja per bigha was the lowest of the last six years, viz., 2 maunds 20 seers, though the area cultivated was the largest during that period. The account given of the ganja crop in the Excise Commissioner's report was probably available to the Commissioner of the Division, and might with advantage have been referred to at greater length. The health of the people also felt the influence of the season: the subsidence of the heavy floods caused malarious fevers to prevail in a general and severe form. Influenza visited almost all the districts of the division, and probably caused, directly or indirectly, many deaths which have been ascribed to fever. The material condition of the people was to some extent affected by the inundations which invaded their homesteads, but there was no actual distress, and the general chronicle of the year, apart from the floods, was one of average prosperity. The prices of food-grains were kept down by the sufficiency of the harvests. Rice was cheaper than in 1889-90, but not so cheap as in 1888-89. There was no remarkable fluctuation in the wages of labour.

Emigration and immigration.

4. The following extract from the Commissioner's report sums up the latest information regarding an experiment of some interest:—

"About 300 Sonthals with cattle were brought during the year by Reverend A. J. Shields and his brother for settlement at Mahakalgoree, in the Alipore sub-division of

the Jalpaigori district. The colony is reported to be doing well, and it is hoped that a much larger number will arrive and take up land next year. The scheme is one intended for the benefit not only of Christian Sonthals, but of the race in general. It has been felt by those interested in the Sonthals that something should be done to regulate and systematize the exodus that is now going on from the Sonthal country, and accordingly a tract of waste in the Government estate of the Dooars has been set apart for Sonthal colonists, where they may live together governed by their own national laws and customs and not losing their national characteristics. At present the scheme is in its infancy, and its development will be watched with interest; it appears to contain great promise of affording a solution of the problem how to deal with the excess population of a poor and over-populated tract of country."

The Lieutenant-Governor has noticed with approval the self-supporting character of this movement, and has had much pleasure in giving it some help during the present year.

Manufactures and trade.

5. Scientific manufactures are less developed in this division than elsewhere. Indigo continues to decline. The silk filatures of Rajshahye experienced the worst year on record through the failure of the mulberry crop. In Darjeeling 47,736 gallons of beer and porter were produced, chiefly for the local troops. In Darjeeling and Jalpaigori taken together 350 tea gardens gave a yield of 23,347,378lbs, which represented an average of 368lbs. per acre from mature plants as compared with 393lbs. in 1889. The Government Cinchona Plantations contained fewer plants and gave a smaller yield, but the private plantations showed better results from a larger number of plants. The cause of this unfavourable comparison has not been explained. The exploration for coal conducted by Mr. Bose in the Darjeeling district, east of the Teesta, has been successful and mining operations are likely to be soon undertaken. Some of the items of the trade returns are worthy of notice as giving an idea of the size of the transactions Thus nearly six lakhs of maunds of rice and 4,75,647 maunds of jute left Dinagepur by rail. The steamer companies at Serajgunge took 23,08,789 maunds of jute to Goalundo for transmission to Calcutta, besides the quantities carried in country boats. The tobacco exported by rail from Rungpur amounted to 11,288 tons. The trade between Jalpaigori and Bhutan again increased largely: the imports from Rs. 1,53,690 to Rs. 1,83,796 and the exports from Rs. 1,39,933 to Rs. 1,68,587. The meaning of the two sets of figures for imports and exports in paragraph 29 is not clear and should be explained. There was a marked revival in the trade with Thibet owing to the partial withdrawal of restrictions on the frontier. The imports of wool (raw) rose from 798 to 4,154 maunds, and of the manufactured article from Rs. 10,201 to Rs. 16,056 in value. The Lieutenant-Governor observed for himself in May last the large quantities of wool coming in on the Gnatong-Darjeeling route. The exports of cotton piece-goods rose from Rs. 18,486 to Rs. 51,858, and it is curious to note that woollen articles were also exported to the value of Rs. 29,503. The reason of this should have been stated. The whole value of trade with Thibet, Sikkim and Nepal has not yet reached dimensions of any importance.

Administrative changes.

6. Besides some minor police arrangements, an outpost was established in the Kalimpong sub-division on the Bhutan frontier: an independent Bench was constituted at a station in the Serajgunge sub-division, and two large Government estates were transferred from Rajshahye to Nadiya. The number of Mahomedans in Government service has risen from 2,346 to 3,147 chiefly in Rungpur and Jalpaigori, by the inclusion of the employés in the State Railway and in the Census and Survey and Settlement Offices. The Mahomedans number 63 per cent. of the population, and hold nearly 35 per cent. of the appointments, so that there is plenty of scope for their further employment.

Crime, Police and Criminal Justice.

7. There was a decrease in the number of cognizable cases reported during the year in all the districts except Dinagepur Rungpur and Jalpaigori. The Commissioner attributes this to two main causes, viz. (1) recruiting, which has led to many suspects and convicts enlisting and leaving the country, and (2) prosperity, combined with a constant and large demand for labour. The analysis of the statistics is not as full as it might have been. The chaukidars are said to have done good work on the whole, and some improvement has been effected in the regularity of their payment by the punchayets. The Commissioner similarly gives credit to the regular police for having worked fairly well, but the

quotations from the district reports are too vague and general to be useful for the Lieutenant-Governor to form an opinion. He notices, however, with satisfaction that their conduct was fairly good, and that under supervision the simpler duties of watching suspicious characters and vagrant gangs have been insisted on with some effect. The percentage of persons convicted to persons tried, ranging from 48 to 67 in the several districts, is not satisfactory, and in Pubna the figures show very poor work. The Lieutenant-Governor has, on his tour of inspection, constantly had occasion to notice the number of remands allowed by the Deputy Magistrates and the detention of witnesses. He trusts to see in future greater despatch in dealing with cases. The Benches in the division have tried 455 cases fewer than last year, but there have been 23 more acquittals. Judged by the ordinary standards, it can hardly be said that these results are good, so that it is difficult for His Honour to share the Commissioner's favourable opinion of their work. It is true that the Benches are useful in lightening the burden of work for the stipendiary Magistrates, and it is consonant with His Honour's experience that independence induces Honorary Magistrates to take more interest and attend more regularly. But the figures above quoted tell their own tale.

Land Revenue administration.

8. The total collections of land revenue reached the percentage of 98 on the total demand, current and arrear together, and two-thirds of the total balance of Rs. 94,296 occurred in Jalpaigori. For this failure on the part of the jotedars various excuses are offered, none of which can be accepted. The Lieutenant-Governor knows that the present assessment and the settlement in progress are both moderate, and, if the jotedars deliberately default, examples should be made in selected cases as a warning to others. Separate orders have issued and will be repeated for current collections to be compared with the current demand. The survey and settlement proceedings in the Western Dooars were in full progress throughout the year, and have brought to light an enormous extension of cultivation to the great benefit of the revenue The subject will be more fully discussed when the Director of Land Records' report comes under review. The want of success in the experiment of introducing cheap sickles in the Dooars is to be regretted. The Lieutenant-Governor cannot be satisfied with 84 per cent. of collections on the total demand from estates under direct management. Similarly in Wards' estates the total current and arrear collections of rent amount to only Rs. 9,22,362 out of a total demand of Rs. 15,06,714. These figures are not creditable to the Managers who absorb an unduly high percentage of the collections as the cost of management. The remarks recorded by the Commissioner on the relations between landlords and tenants are serious as emanating from an officer of Mr. Lowis' great experience. They testify to the existence of an unfortunate state of things. After giving specific instances of ill-feeling, he writes:—

"In fact throughout the division more or less the former cordial relations between landlords and tenants are passing away. The value of land has, by the opening out of railway, roads, and other means of communication, gradually but enormously, increased in this division, and the profits derivable from land have also increased. In this increase the landlords have sought to participate, not by revising their rent roll and increasing the rates of rent which they might have done, but by the time-honoured custom of levying cess; the amount varying according to the power and influence of the landlord. Now that the knowledge of the law on the part of the tenants has increased, and the landlords find that the rents, in order to be realized by a civil suit, must be recorded, an endeavour is being made by them, and resisted by their ryots, to incorporate the old rent and subsequent cesses into a consolidated increased rental; hence the report of quarrels between landlord and tenant in Pubna, Rajshahye, and Rungpur. In Dinagepur, which is a backward district, the rate of rent is often very low; but here, more than elsewhere, the actual receipts of the landlord are largely increased by cesses such as kabulabeshi (*i.e.*, an agreed increase), which they will ere long find a difficulty in realizing, * * * * * but at the bottom of all lies the rent question, the landlords trying to make the old rent, plus cesses, the present demand, and the ryots, in their attempts to escape this imposition, playing off one section of the landholding community against the other. The feeling of traditional respect for, and obedience to, the old established landlords lingers, but, if pressed too hard, the ryot is not slow to invoke the aid of a wealthy neighbour."

It is a somewhat curious commentary on the situation as thus described to hear that the Tenancy Act has worked without friction during the year mainly because its provisions have been but little applied.

Excise, Income-tax; Stamps.

9. The excise revenue shows a slight increase in each district, amounting to Rs. 48,636 in the division: the incidence is 1 anna 8 pies per head only. Simultaneously the stamp revenue decreased by Rs. 24,896, chiefly in consequence of a diminished sale of court-fee stamps, concurrent with a decrease in the number and value of suits instituted in the Civil Courts. The income-tax final demand was Rs. 4,113 above the previous year, but the collections were lower by Rs. 281, and the outstanding balances had increased from Rs. 5,125 to Rs. 9,003. These figures are not satisfactory, and are not fully accounted for. For instance, no attempt is made to explain why the assessments in Dinagepur were so delayed as to be completed too late to be realized within the year.

Communications.

10. Considerable efforts were made in the year to develop communications in the Dooars. Government granted Rs. 10,000 for the improvement of the Alipur-Haldibari road; a total of Rs. 37,000 was spent on original works, Rs. 2,753 were spent on the improvement of other roads, and Rs. 2,300 out of the Dooars Improvement Fund for the construction of three new roads. The Jalpaigori Dooars Railway has been sanctioned and is to be completed by private enterprise within two years. The construction of four large bridges on the Central Emigration Road, an important feeder to the Haldibari Railway station, was undertaken by the Jalpaigori District Board by means of a loan taken from Government. A resurvey of the line projected from the Sultanpore railway station to Bogra is in progress, and suggestions for its extension have been thrown out, but they will require much closer examination and the financial co-operation of those locally-interested before they can assume a practical shape. The steamer services between Rampore Boalia and Damookdea and Maldah and between Pubna and Kooshtea have conferred an immense boon on the inhabitants and traffic of those districts, and the Lieutenant-Governor would be very glad to see them extended wherever possible. The sum of Rs. 1,98,617 was actually spent by the District Boards and Road Cess Committee in the division as compared with Rs. 2,03,709 spent on repairs. The Collector of Rungpur reports "that he has been for months urging the authorities to extend the Rungpur line to Bhowanigunge on the Brahmaputra, a post of call for 'despatch' steamers, and only four miles from Gaibanda. Though Messrs. Macneil and Company of the Rivers Steam Navigation Company have guaranteed expenses, nothing has yet been done. There is no office on the Brahmaputra between Dhubri and Serajgunge. Messages are now ferried across the Teesta at Kownia in Rungpur, and a great waste of time results. The line should be carried across the river." The Lieutenant-Governor desires to be furnished with a fuller explanation of the proposition and the difficulties encountered.

Education.

11. Taking the Division as a whole, and having regard to the total number of schools, there was a loss of 24 schools and 1,585 pupils. The number of pupils, 92,993, is thus almost identical with the number 92,990 under tuition in 1888-89. The decrease is chiefly in Pubna and Bogra, and under the heads of lower primary and indigenous schools, attributed in the former district to the high flood and consequent distress, and in the latter to the insufficiency of the rewards given to the gurus and the want of returns. It is feared that the advantages of education are not as fully appreciated in this Division as elsewhere. The percentage of attendance of boys of school-going age has fallen from 16 to 14, and there were only 1,509 girls at 84 girls' schools, besides 1,462 at boys' schools. It is a noticeable feature that the proportion of Mahomedan boys under education is larger than that of Hindu boys, but this criticism is limited to those studying in the lower primary and indigenous schools.

Local self-government, &c.

12. The Commissioner reports that, generally speaking, the attendance of the members of the several local Committees in the division shows a slight improvement over that of the preceding year. This may be so, but it is not proved by the figures furnished, which only state the average attendance at each meeting for the year under report, without mentioning the total number of members of the Committees and Boards at each place: it would also be useful to know the number of meetings called and held. The Lieutenant-Governor has

perused with attention the remarks made regarding the work done by each of the principal municipalities, and will take another opportunity of expressing his views on municipal administration generally. But he will say now that in his opinion the registration of births and deaths which is performed in the Rampore Boalia Municipality, for instance, by four Sub-Registrars assisted by two domes and three chaukidars should receive more personal attention from the Commissioners. If they will divide the municipalities into wards, and each take charge of one, it is hardly possible that they will fail to hear of the domestic occurrences within those areas, and it is not too much to expect that they will verify that these events have been accurately entered in the registers. A system so worked is far preferable to enforcement of the penal provisions of the law. It is unsatisfactory to hear that five meetings of a District Board had to be postponed for want of a quorum.

Conduct of zemindars.

13. After what has been said above of the relations between landlords and tenants, it is an agreeable surprise to read that the zemindars in the division are, on the whole, considered to have conducted themselves well. The following are favourably mentioned—the Tagore zemindars of Pubna, Babu Dakhina Ranjan Sanyal of Salap in Serajgunge, Rajah Govindo Lal Roy of Rungpore, Rajah Janoki Bullav Sen of Dimla, and the Rajah of Kakina. Most, however, of the principal zemindars in Rungpur are absentees and the estates of others are under the management of the Civil Courts.

14. The Lieutenant-Governor desires to place on record his high sense of the services rendered to Government by Mr. E. E. Lowis through a long career. His intimate knowledge of the country and its inhabitants has rendered his advice especially valuable in connection with the settlement operations in the Dooars. The favourable mention made by the Commissioner of Mr. Marindin, Colonel Boileau, Mr. Sunder, and his Personal Assistant Babu Hari Mohan Chandra entitles them to the acknowledgments of Government.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

RESOLUTION ON THE GENERAL ADMINISTRATION REPORT OF THE PRESIDENCY DIVISION FOR THE YEAR 1890-91.

GENERAL DEPARTMENT—MISCELLANEOUS No. 1113.

Darjeeling, the 21st September 1891.

READ—

The General Administration Report of the Presidency Division for the year 1890-91.

MR. A. SMITH was in charge of the Presidency Division during the year, except for two months, when he was on leave and Mr. E. V. Westmacott officiated for him. His thorough knowledge of the Division and of its wants, and his extensive experience, are apparent in his report, which deals fully with every subject. It is a matter for regret that the District Officers of the 24-Pergunnahs and Nuddea were changed several times on public grounds.

Tours.

2. The Commissioner visited the head-quarters of all the districts, and states that he inspected most of the subdivisional offices and treasuries. He ought to have inspected them all in the course of the year. This is an omission which the Lieutenant-Governor is not disposed to overlook, and he trusts that it may not occur again. The tour of the Collector of the 24-Pergunnahs again fell short of the period of 60 days prescribed for this district, though a similar failure was unfavourably noticed last year. Sir Charles Elliott cannot regard the system of flying visits, which obtains in this district, as an adequate substitute for a regular tour, and desires that it may be avoided in future. It is also important that District Officers should leave full inspection notes on record, and that every Subdivisional Officer should have an inspection book, which Commissioners should examine for themselves and see that irregularities when noticed are corrected. The preparation for the census was the chief object of all the tours, but the Collector of Moorshedabad was also engaged with the distribution of charitable relief and the issue of loans to counteract the effects of the floods. The Subdivisional Officers, without a single exception, more than fully complied with the orders of Government in respect of touring. No sufficient explanation has been offered for the failure of the several Collectors to inspect their offices at Alipore and their subdivisional offices and treasuries. The use of office inspections was amply proved by the irregularities in several departments detected by the Collector of Moorshedabad at his periodical examination of his office registers.

Weather and crops.

3. In four out of the five districts the rainfall was heavier than in the two preceding years, and it was for the most part favourably distributed, occurring in the months in which it was most required for the crops. A great portion of the districts of Nuddea, Moorshedabad, and Jessore, and small portions of the 24-Pergunnahs and Khulna, were flooded. The following table shows approximately the extent and severity of the damage done by the inundation:—

	Area affected in square miles.	Quantity of aus destroyed. Annas.	Quantity of amun destroyed. Annas.
24-Pergunnahs	129	2	16
Nuddea	835	14	12
Jessore	565	8	16
Khulna	100	2	12
Moorshedabad	351	10	3

Relief was freely given in the affected localities wherever needed, so that Rs. 79,651 were spent under various heads in the Division; the agricultural loans advanced amounted to Rs. 64,318 of this total. The net result of the season was that in all the districts the outturn of the aus rice was 2 to 4 annas less than the previous year, and the amun rice was similarly deficient in three districts: only in Moorshedabad the harvest gave a somewhat larger produce.

Public health and material condition of the people.

4. Assuming that the registration of deaths can be trusted—and this is a very large assumption—the recorded statistics of mortality show that the Division was more unhealthy than in the two years preceding, the ratio of deaths per 1,000 of the population having increased from 23·7 and 22·9 to 25·8. The increase is entirely

attributable to a larger number of deaths from fever, as the deaths from cholera and from other causes were fewer than in either of the two previous years. Jessore and Khulna fared worse and Nuddea and Moorshedabad better than in 1888-89 and 1889-90, but the health of the 24-Pergunnahs deteriorated. It is a matter for congratulation that the Ardhodoya Jog festival in February, which attracted great multitudes of pilgrims to the Ganges, gave rise to no serious outbreak of cholera. It is also satisfactory to note the general improvement in Nuddea in both the urban and rural areas, comparing favourably with the years antecedent to the unhealthy period, 1880—85. Influenza is said to have prevailed in Khulna in an epidemic form, leading to many deaths by fever and other complications among its victims: a similar epidemic attacked Moorshedabad. In other respects there was no particular outbreak, but, as the Commissioner observes, imperfect drainage and the want of good drinking water are the chief sanitary defects complained of everywhere. The material condition of the people shows no marked change from year to year: the floods already mentioned necessarily caused some suffering, but there was no rise in the prices of food-grains to accentuate the distress. In fact rice was cheaper, as compared with the previous year, in all the districts except Khulna: the stocks in hand and the movements of trade kept prices down. The price of skilled labour has risen in the 24-Pergunnahs since two years ago; otherwise there has been no change in wages.

Manufactures and trade.

5. The number (46) of mills, presses, and factories at work in the 24-Pergunnahs remained unchanged, but considerable variations took place in the outturn. For instance, the gunny bags and cloth produced fell in value from Rs. 1,69,74,814 to Rs. 1,17,48,571, and jute baling from Rs. 2,72,82,140 to Rs. 1,88,55,919, owing to a depression in the colonial and country demand. Cotton twist and yarn showed an increase of production, but the trade has since taken an unfavourable turn. Indigo in Nuddea was so much damaged by the floods that the produce fell from 6,650 maunds, valued at Rs. 11,52,806, to 2,338 maunds, valued at Rs. 4,07,478. Similarly, in Jessore and Moorshedabad the outturn fell from 2,695 to 858 maunds and 4,358 to 2,279 maunds with corresponding diminutions in the values. In the former the agrarian difficulties added to the effects of the bad season. The sugar industry is declining to some extent. In Jessore the number of factories diminished from 180 to 160, as well as the weight and value of unrefined sugar: the case was similar in Khulna, and in both districts the importation of cheap foreign sugar is ascribed as the cause. The silk filatures in Moorshedabad decreased by 12, but the quantity of silk manufactured showed an increase. The Lieutenant-Governor regards the returns of the Calcutta trade, except that which is rail-borne, as open to much doubt. But taking the figures as derived from the registration offices on the roads for what they are worth, as apart from the river traffic, they show an increase of over 7½ lakhs of maunds imported into Calcutta. The trade on the Nuddea rivers shows a large increase in the imports and decrease in the exports, attributed to the effect of the flood on the district. The returns of the Khulna trade afford some evidence that merchants and traders have not found it convenient on account of the difficulties of transhipment to avail themselves of the rail to any appreciable extent.

Administrative changes.

6. Under the heading of administrative changes the Commissioner has collected the several improvements effected in official procedure during the year, such as the system of payment of rent by money-orders, &c. Such a list is useful for reference, but its application is not limited to the Division, and the different matters will be dealt with in the departmental reports. Certain alterations of jurisdiction have been effected, as, for instance, Magisterial and Small Cause Court powers have been given to the Station Staff Officer at Barrackpore within cantonment limits; the boundaries of the Sealdah Police Court have been extended, and in Khulna new registration offices have been opened in the Bagirhat sub-division. The number of Mahomedans in superior service has increased from 201 to 322, and in inferior service from 1,611 to 1,911. The figures do not appear to have been compiled with proper care: all the percentages required have not been calculated, and it is not clear, in the case of Nuddea for instance, how the percentage of appointments held by Mahomedans can have fallen from 34·4 to 25·2, when the number of employés has risen from 61 to 254.

7. The number of cognizable crimes reported in the Division has decreased from 14,798 to 14,689. There was a marked development of rioting, from 381 to 490 cases, attributable in the main to the indigo disturbances in the Jhenida and Magurah subdivisions. At the same time non-cognizable crime diminished from 18,305 to 17,647 cases. No special explanation has been given of these general results, which are the outcome of the fluctuations in each district. The conduct of the police during the year appears from the statistics of punishments to have improved, and the percentage of convictions obtained in police cases rose from 27 to 29. The increase in the reconvictions from 182 to 212 may also be credited to the police. The following passage from the report of the Magistrate of the 24-Pergunnahs reflects credit on the village police and punchayets of that district as a body:—

Police and crime.

"There has been nothing to complain of in the conduct of the chowkidars. They have done fairly on the whole. In this district they receive good salaries, varying from Rs. 4 to Rs. 6 per mensem; the higher figure being more common. Moreover, under the excellent system devised by Mr. Forbes, they are paid with remarkable punctuality once a quarter in the presence of a gazetted officer. They have nothing to complain of in respect of remuneration, and their shortcomings are chiefly due to imperfect supervision. There is generally a good understanding between the village punchayet and the chowkidar. The sympathies of the punchayets are generally on the side of law and order, and they are on the whole valuable aids to the police."

The Benches, and Honorary Magistrates sitting singly, dealt with 7,647 cases during the year 1890, as compared with 6,027 in 1889. They have almost all been made independent, and the attendance of the Honorary Magistrates, except in a few instances, has been generally regular.

8. The percentage of collections on the land revenue demand has risen from 95·73 to 96·8. Another year the percentages should be calculated separately on the different classes of estates. No explanation is offered of the large abatement of revenue, amounting to Rs. 1,00,138, which greatly affected the arrear demand and neutralized the better results obtained in the current collections. The financial results of the management of khas mehals were, as the Commissioner admits, far from satisfactory. The percentage of collections, viz., 77·7 on the gross demand, is not creditable, and as the percentage on the current demand is given as 93, it is not clear what is the object of stating the percentage on the current demand in 1889-90 to have been 106, unless it is to draw attention to the shortcomings of 1890-91. The bad results are ascribed to floods and vicissitudes of season; but it should be remembered that the assessment is intentionally moderate to admit of its being levied in all seasons alike. The subject of Government estates is receiving His Honour's special attention, and he expects District Officers to realize the importance which Government attaches to it. The omission of all allusions to settlements in the Commissioner's report is remarkable and should not recur. Sir Charles Elliott trusts that in working the Sale law with leniency and moderation as the Commissioner reports, the Collectors are not neglecting the just rights of Government or encouraging a tendency to unpunctuality and unthrift among the payers of land revenue.

Land revenue.

In the table of the demands, collections, &c., of the Road and Public Works cesses an unnecessary distinction has been made between the two cesses, the figures being identical (except when there is an odd rupee in the collections), and in future they might be treated together. The percentages of collections, viz., 83 of the current and 76 of the arrear demand, are not at all up to the standard which Sir Charles Elliott desires to see attained. Similarly, in Wards' estates instances are given of unsatisfactory collections, in which great improvement must be insisted on. In the Cossimbazar estate, for instance, over 100 per cent. of the current demand was realized, but it is simultaneously admitted that only about 50 per cent. of the total demand was secured.

Cesses.

Wards.

9. The total increase in the excise revenue of the Division was Rs. 1,33,078, obtained from every exciseable article except rum. The increase in Calcutta was over Rs. 1,40,000, attributed to the better settlement of shops, larger

Excise, salt, stamps, income-tax.

consumption of licit liquors and licit ganja and opium, but there was a decrease in three out of the five districts. The licenses issued were 240 less than in the previous year. The falling off in the consumption of salt in the protected areas of the 24-Pergunnahs and Khulna recorded last year was recovered by an increase of nearly 25,000 maunds. The Lieutenant-Governor trusts to the local officers to see that the penal clauses of the Salt Act are enforced with discretion, and that petty offences are not multiplied with a view to improving the appearance of police returns. The increase in the stamp revenue was Rs. 1,57,045, against an increase of Rs. 1,27,623 in 1889-90—a satisfactory indication of the better observance of the law and of the facilities afforded for the sale of stamps. The gross demand on account of the income-tax was Rs. 37,964 less than in the previous year, but the eventual collection showed an increase of Rs. 30,276: these figures, taken together, indicate an improvement in the method of assessment.

Roads and communications.

10. Constant applications are made to the Lieutenant-Governor in addresses presented to him on his tours of inspection for the construction of branch railways, feeder lines, tramways, &c., which show that the people fully appreciate the benefits conferred on them by British enterprise in these respects. But it is generally found that such proposals are submitted in an immature, crude state, and that their promoters are more anxious to obtain the assistance of Government than ready to come forward themselves with the necessary funds. Sir Charles Elliott has had considerable experience of schemes of this character, and has invariably pointed out that the resources of Government are limited and are required for the development of arterial communications, so that projects of local importance must enlist the sympathy and support of local capitalists, or at any rate of private enterprise, if they are to be executed within a reasonable period. At the same time he has gladly intimated his willingness to afford the aid of the skilled officers of Government in making surveys and framing estimates for promising lines of railway and ancillary works. When the Commissioner wrote his report, he was apparently unaware that the Nalhati State Railway is to be made over to the East Indian Railway Company, who will doubtless effect the improvements required in its working. He is apparently not quite correct in stating that all attempts to keep the Bhagirathi navigable are unavailing, as His Honour was lately informed locally that a passage of some feet of water is maintained through the cold weather. It is satisfactory to notice that the condition of the roads has been very much improved during their three years' management by the District Board of the 24-Pergunnahs. The statement that the communications in Nuddea are gradually deteriorating requires the attention of all concerned.

Education.

11. It would have been a help to Government if the Commissioner had made some attempt to elucidate the educational statistics of his Division with some comments of general application. The schools of all grades regarded as public institutions decreased from 5,794 to 5,521, and their pupils from 191,013 to 177,404. Allowing for one new private institution, there has been a net loss of 272 schools and 13,599 pupils. It is to be regretted that this loss has occurred almost entirely in the lower primary schools and female schools. At the same time the expenditure from public sources increased, while private contributions declined. The District Boards have aided the upper rather than the lower primary schools. The unaided lower primary schools advanced, both in respect of the number of schools and of the pupils, affording evidence of the demand for this class of education, which it is specially the duty of the District Officers and District Boards to meet as far as possible. Notwithstanding the figures above quoted, the District Boards are said to have generally evinced much interest in educational matters and to have worked harmoniously with the Educational Department. The Commissioner attributes the decrease in primary schools and pupils, not so much to a change of system, as to want of care in the collection of the statistics by the departmental officers. The attention of the Director of Public Instruction will be invited to these remarks. The number of Mahomedan pupils declined by 3,570, but the percentage of them as compared with the total number of pupils varied to an infinitesimal degree.

District and Local Boards and Municipalities.

12. The portion of the Commissioner's report which deals with Local Self-Government institutions is replete with facts, such as the constitution of the various committees, their meetings, &c.; but, for a survey of the general question, Mr. Smith contents himself with referring to the opinion he expressed last year, that the system of Local Self-Government continued to work smoothly and with fair success. One of the District Officers writes:—

"I am doubtful whether Local Boards, as at present constituted, are of much real use. They have scarcely any power of initiation, and their functions are practically confined to disbursing fixed grants on certain prescribed work. They take no part in the financial administration of the district, and their efficiency as executive agents of the District Board is not great. On the other hand, they spend a certain amount of money on establishments, office buildings, and the like, which might be more usefully applied. I am disposed to think the scheme of Local Self-Government requires revision."

And the same officer writes of municipalities:—

"The elections have disclosed the circumstance that the best men, generally speaking, stand aloof from municipal administration, while seats at the Municipal Board are hotly contested by those who lead, or who have to serve, village factions, or seek to acquire or keep up influence with the people of the locality. A few men undoubtedly there are who seek or accept office from purely unselfish motives; but these are rare."

The Commissioner, however, regards Local Boards as useful agencies for controlling the local expenditure, and very properly considers that the remarks about municipalities are not applicable to such institutions in India alone.

Public feeling and the public press.

13. In this Division there is more chance than elsewhere of an educated public opinion being developed in the towns, but it is not to be expected that there will be any special change from year to year among the masses of the people. Their interests in life are necessarily limited to their immediate concerns—in many cases to their ancestral homes and fields. There are 38 presses, chiefly engaged in publishing newspapers; some of them are to be found in each district except Khulna, and the total circulation of the daily and weekly issues amounts to a considerable number, working up to the formation of what would be regarded as public opinion in any other country, though in India it represents the views of a limited circle. The subjects discussed in the vernacular papers were the same as those which filled the columns of the English press, with the difference that more prominence was given to such local matters as the floods and losses of crops. With regard to the tone of the vernacular and Anglo-vernacular press, the Commissioner writes as follows: "it shows signs of gradual, but steady improvement; more care is taken to get at real facts, and it is becoming understood that indiscriminate and unvarying censure destroys its own effects." These views are rather optimistic, and the Lieutenant-Governor doubts if it is accurate to say that there is any perceptible improvement in the tone of the vernacular press in general, but he is glad to believe it true in the case of the more respectable newspapers. Indeed the Commissioner goes on to add:—"The criticism is frequently puerile and nearly always hostile. It is difficult to believe that some of it is written in good faith."

Conduct of zemindars.

14. Absenteeism is the characteristic of the richer landlords in the 24-Pergunnahs, as elsewhere. In Nuddea no special work of public utility was carried out by any of the zemindars, but both here and in other districts they contributed for the relief of distress when required, though not always as much as they might have done. In the Satkhira subdivision some of the zemindars and talookdars were concerned in criminal cases, but on the whole the relations between landlord and tenant were amicable throughout the Division. The Maharani Surnomoyi, C.I., again exhibited the generosity which has made her name so renowned for her acts of liberality and charity. The Nawab Bahadur of Moorshedabad, whose serious illness is greatly to be lamented, and other members of the Nizamat family showed themselves worthy of their position. It is a welcome sign of the times that members of this historical family have commenced to take marked interest in local affairs, and the Lieutenant-Governor trusts that their good example will induce other native gentlemen of family to undertake serious and responsible public duties, in which they can do much to co-operate with Government.

15. The Lieutenant-Governor, in acknowledging the fulness of the Commissioner's report, will only express a wish that his successors will, besides stating facts, devote more attention to the formation of conclusions on a review of the varying circumstances of the districts. He takes this opportunity of recording his sense of Mr. A. Smith's merits as a painstaking and experienced officer, possessed of great knowledge of Bengal administration and of ripe judgment. Sir Charles Elliott is glad to notice the favourable opinion expressed by the Commissioner of Mr. Forbes, Mr. Bolton, Mr. Ritchie, and Mr. Baker as District Officers, and of Baboo Durgagati Banerjee as Collector of Calcutta. The Commissioner's remarks on all the officers subordinate to him will be duly considered in the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 19th September, 1891.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
		Western Districts.		
Burdwan Divn.	1	Burdwan Sept. 19, '91	0·19	Weather—hot. *Aus* paddy reported to be a 16-anna crop in Culna. Sugarcane and other crops doing well. For *aman* crop more rain wanted throughout district. Fodder plentiful. Prices of common rice :— Srs. Burdwan ... ... 17 Culna ... ... 13¾ Cutwa ... ... 16 Raneegunge ... ... 16 } per rupee.
		Culna ...	1·97	
		Cutwa ...	0·26	
		Raneegunge ...	1·09	
	2	Bankoora „ 19, '91	1·01	Sky clear and weather warm. Harvesting of *aus* continues. Prospect of *aman* favourable. Condition of cattle good and supply of fodder sufficient. Common rice selling at 18 seers per rupee at Sudder and 17½ seers at Bishonpore.
	3	Birbhum „ 19, '91	0·45	Almost no rain during the week; only an inch and-a-half since the beginning of the month, and 4½ inches in the last 4 weeks. This is certainly bad, and the rice in the high grounds has distinctly suffered, though the low ground crops still look very well. Much depends on good rain falling soon. Condition of cattle normal. Fodder and water everywhere plentiful.
	4	Midnapur „ 19, '91	3·33	Weather—seasonable with occasional showers. Prospects of paddy crop good. Sesame and sugarcane doing well. Cattle-disease in Chandrakona, Keshpur, and Garbeta. Prices of common rice :— Srs. Sudder ... ... 16 Contai ... ... 18 Tamluk ... ... 16 Ghatal ... ... 16 } per rupee.
	5	Hooghly „ 19, '91	1·45	Weather—hot with slight showers now and then. *Aus* paddy being harvested. Winter paddy and sugarcane promise well. Cattle-disease in isolated places reported from thanas Chunditola and Palba. Water and fodder for cattle sufficient everywhere. Prices of common rice :— Srs. Sudder ... ... 13 Serampore ... ... 13 Jehanabad ... ... 16 } per rupee.
		Serampore ...	2·44	
		Jehanabad ...	0·29	
	6	Howrah „ 19, '91	1·11	Weather—showery. Harvesting of jute and *aus* crops nearly finished. Prospects of *aman* and sugarcane satisfactory. Price of coarse rice 14 seers per rupee. Fodder and water-supply sufficient. Health of cattle good.
		Uluberia ...	2·29	
		Central Districts.		
Presidency Divn.	7	24-Perghs. Sept. 22, '91	1·28	Weather—seasonable: hot and cloudy. *Aus* and jute crops are being cut and harvested with 14 and 13½ annas outturn respectively. Transplantation of *aman* almost completed. Sugarcane and *aman* doing well. More rain wanted for *aman* in Baraset. Prospects good. Cattle-disease reported from Diamond Harbour and Harowa. Supply of fodder and water sufficient. Prices stationary.
	8	Nuddea „ 19, '91	0·69	Weather—sunny and bright. Harvesting of *aus* almost finished. *Aman* plants require rain. Other crops on the ground doing well. Condition of cattle good. Supply of fodder and water sufficient.
		Kushtea ...	1·17	
		Meherpur ...	0·21	
		Chuadanga ...	0·37	
		Ranaghat ...	1·21	
	9	Khoolna „ 19, '91	2·74	Weather—unsettled with thunder and occasional heavy showers. Cutting of *aus* and jute nearly finished. Transplantation of *aman* going on in parts. More rain still wanted. Fodder sufficient. Cattle-disease still prevalent.
		Bagirhat ...	0·53	
		Satkhira ...	1·45	
	10	Jessore „ 19, '91	1·78	Weather—hot. Prospects fair. *Aman* paddy wants more water. Rivers are beginning to rise again, but slowly.
		Jhenidah ...	0·50	
		Magura ...	1·34	
		Narail ...	0·62	
		Bongong ...	1·37	
	11	Murshedabad „ 21, '91	1·46	Weather—hot and cloudy. Harvesting of *bhadoi* almost completed. Transplantation of *aman* finished in Lalbagh subdivision. Rain much wanted. 29 head of cattle died of small-pox in thana Khargaon in Kandi subdivision. There is sufficient supply of fodder.
Rajshahye Divn.	12	Dinagepur „ 19, '91	0·89	Weather—hot. Outturn of both *bhadoi* and jute estimated to be 10 annas. Recent rain has done some good to standing crops. More rain still wanted for winter rice, prospects of which are not favourable. Condition of cattle reported to be good. Supply of fodder and drinking-water sufficient. Price of rice at Sudder stationary.
		Thakurgaon ...	2·94	
	13	Rajshahye „ 19, '91	Figures not given	Weather—very hot and not enough rain. Recent rain has done much good; but a great deal more rain wanted over greater part of district. *Aus* and jute have not yielded plentiful crops. Supply of water and fodder generally ample. A little cattle-disease reported.
		Nattore	1·92	
		Nowgong ...	4·60	
	14	Rungpur „ 19, '91	2·08	Weather—hot and cloudy. Prospects not favourable. More rain wanted for cultivation of *aman*. Fodder sufficient. No report of cattle-disease from anywhere.
		Nilphamari ...	1·05	
		Gaibanda ...	0·08	
		Kurigram ...	1·21	

	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*				
		Central Districts—concld.		
Rajshahye Divn—*concld.*	15	Bogra Sept. 19, '91 Sherpur ... Nowkhilla ...	1·51 4·26 2·36	Weather—generally fine; occasionally overcast. Late rain has improved prospects of *aman* rice, and there is no immediate cause for serious apprehension. Transplantation going on, but generally much behindhand. Growth of crops previously transplanted rather slow, but none have failed. It is particularly fortunate that the heaviest rain has been in the south of the district (about Sherpur and Nowkhilla), where the fall had previously been exceptionally scanty. But a good deal more rain will be needed during the next few weeks. Some land is being cultivated for mustard and other cold-weather crops. Sugarcane doing well. No lack of fodder. Price of common rice has not lately risen: it is selling at 15 seers a rupee.
	16	Pubna „ 19, '91	0·45	Weather—hot and cloudy. More rain wanted. Rivers again subsiding. Jute still being reaped. Prospects of *aman* paddy not very favourable for want of water. Condition of cattle good. Fodder sufficient.
	17	Darjeeling „ 19, '91	3·49	Weather—fair. Cutting of *bhadoi* crops completed; outturn appears to be between 10 and 12 annas. More rain wanted for *haimanti* rice. Condition of cattle good. Supply of fodder and water sufficient.
	18	Julpigoree „ 19, '91	5·34	Weather—very hot. Rain much wanted. Prospects of crops not good. Price of rice rising. Supply of fodder and water sufficient. Condition of cattle good.
		Eastern Districts.		
Dacca Divn.	19	Dacca Sept. 19, '91	1·23	Weather—seasonable. Harvesting of *aus* rice nearly completed. Jute being cut. *Aman* paddy has been partially damaged in high lands. Fodder and water available. Condition of cattle good. Common rice sold at from 15 to 18 seers per rupee.
	20	Furreedpur „ 19, '91	1·02	Weather—seasonable. Prospect of crops fair. More rain wanted for paddy on high lands. Rice selling at 16, 15, and 16¼ seers per rupee respectively at Sudder, Goalundo, and Madaripur. Condition of cattle good, and fodder available.
	21	Backergunge „ 19, '91 Patuakhali ... Perozepur ...	1·87 2·07 2·39	Weather—somewhat hot. State and prospects of crops fair. Prices of common rice 13 to 18 seers per rupee. Condition of cattle on the whole good. Supply of fodder and water sufficient.
	22	Mymensingh „ 19, '91	2·47	Weather—hot with occasional rain. Transplantation of winter rice almost finished. The crop has been much damaged by want of rain. Condition of cattle fair. Supply of fodder and water plentiful. Common rice sells at 14 seers per rupee.
Chittagong Divn	23	Chittagong „ 22, '91	0·39	More rain much wanted. *Aus* still being harvested. *Aman* transplanted to about 12 annas of land, but suffering for want of rain. Prices have risen slightly.
	24	Noakhally „ 19, '91	2·63	Weather—showery in beginning of week: rainless and very hot since. Standing crops benefited by some heavy showers that have fallen; but more rain is much wanted. Prices lower at Sudder, higher at Fenny. Fodder and water-supply sufficient.
	25	Tipperah „ 19, '91	1·48	Weather—hot. Cloudy. Rain wanted for standing crops and for transplantation of rice throughout the district. Prospects of rice crop less favourable. Jute trade brisk: rates high. Prices of food-grains stationary. Fodder insufficient.
	26	Chittagong Hill Tracts. „ 17, '91	0·78	Weather—extremely hot throughout the week. Harvesting of *jum* paddy continues. Transplanting in low lands by plough-cultivators nearly complete. Lands are being ploughed for mustard. Common rice being sold at 13 seers 5 chittacks per rupee.
BEHAR				
Patna Divn.	27	Patna „ 19, '91 Barh ... Behar ... Hilsa ...	2·83 1·00 2·04 1·02	Weather—very sultry and uncertain. Harvesting of *bhadoi* crops going on. Rain during the week has somewhat improved the rice crop. More rain wanted. Little or no time left for transplantation. Prices stationary.
	28	Gya „ 19, '91 Jehanabad ... Nawada ... Aurungabad ...	0·81 0·08 1·53 Nil	Weather—hot and occasionally cloudy. *Bhadoi* being harvested. Late rain has done some good to paddy. More rain wanted. Prices of food-grains almost stationary. Supply of fodder and water for cattle sufficient.
	29	Shahabad „ 19, '91 Bhabuah ... Sasseram ... Buxar ...	2·69 0·12 0·64 2·06	Weather—hot. Winds east, when any. Prospects have much improved in Arrah and Buxar subdivisions, where there has been a fall of rain of over 2 inches. In Sasseram rain has also done good. In Bhabuah crops are yet in good condition, but rain is badly wanted. Harvest of *bhadoi* going on. More rain still required. Prices stationary.
	30	Durbhunga „ 19, '91 Somastipur ... Madhubani ...	0·11 0·22 0·21	Weather—hot and occasionally cloudy. Paddy on low lands still good, but rain urgently wanted. Nothing but heavy rain within a week can save the crops. *Bhadoi* being harvested and is a very fair crop. Cattle in good condition. Fodder and water plentiful.

Division	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR—*concld.*					
PATNA DIVN—*concld.*	31	Mozufferpur	Sept. 19, '91	0·22	Weather—hot and occasionally cloudy. Want of rain is being much felt throughout the district. Fields are dry, but hitherto no appreciable damage has been done. A good *hathiya* rain can still save the rice crop. *Bhadoi* harvest still continues. Indigo *mahai* almost finished. Prices stationary in Sudder, rising in Sitamarhi. Ample fodder and water-supply for cattle.
		Hajipur	...	0·85	
		Sitamarhi	...	0·50	
	32	Sarun	„ 19, '91	0·74	Rain in middle of the week; since then weather hot again. *Bhadoi* being cut. Prospects of paddy greatly improved by the rain. Fodder and water for cattle plentiful.
		Sewan	...	5·36	
		Gopalgunge	...	2·40	
	33	Chumparun	„ 19, '91	3·31	Weather—hot and cloudy. Rain during the week has done good, and *bhadoi* is now safe, but more rain is wanted everywhere for *aghani*. *Bhadoi* good, and *aghani* promises well if rain falls. Supply of fodder and water for cattle plentiful.
		Bettiah	...	1·36	
BHAGULPORE DIVN.	34	Monghyr	„ 19, '91	0·75	Weather—hot. *Bhadoi* harvest still going on. *Makai* and *marua* coming into market. Rain urgently needed for rice crop, which in most parts is suffering; about 2 annas not yet transplanted, and this may be regarded as lost. Cattle in good condition. Supply of fodder and drinking-water sufficient.
		Jamui	.	0·60	
	35	Bhagulpur	„ 19, '91	1·27	Weather—generally hot, but there was good rain in places on the 17th. Prospects of winter rice on the south of the Ganges are fair. On the north of the Ganges more rain is urgently wanted, but reports are awaited as to how far the recent rain extended in that direction.
	36	Purneah	„ 19, '91	6·12	Weather—again close and little appearance of further rain. Recent rain has been of great use as it allows preparation for *rabi* to proceed where the *aghani* has been a failure. It has also saved much of the *aghani* for the present, but in parts of the head-quarters subdivision this crop is so overrun with weeds that it will come to nothing. No cattle-disease. Fodder abundant.
		Kishengunge	...	1·67	
		Arrareah	...	2 30	
	37	Maldah	„ 19, '91	2·64	Weather—hot and fine. Rain general. Harvesting of *bhadoi* over except in one or two places. Recent rain has done much good to standing crops. Transplantation of winter rice and sowing of *kalai* going on vigorously. No disease amongst cattle. Fodder and water-supply sufficient. Common rice selling at from 13 to 16 seers per rupee.
		Chanchal	...	1·98	
		Shibgunge	...	2 02	
		Gajole	...	5·07	
	38	Sonthal Perghs.	„ 19, '91	0·51	Weather—generally cloudy and hot. Prospects continue fair. About 3½ inches of rain fell at Godda and 2½ inches at Rajmehal, and this rain has done much good to paddy on the high land. *Janera* being harvested; an outturn of about 16 annas anticipated. Cattle in good condition, and water and fodder-supply sufficient.
ORISSA.					
ORISSA DIVN.	39	Cuttack	„ 19, '91	2·92	Weather—seasonable. *Beali* harvest in progress; outturn promises to be good. Transplantation of *sarad* not yet completed. General prospects good, though low-lying tracts are flooded.
	40	Pooree	„ 17, '91	3 04	Weather—seasonable. Transplanting and weeding of winter rice (*sarad*) going on. Early rice is being harvested with an average outturn of about 10 annas. Miscellaneous crops are doing well. Prices of common rice stationary. Cattle-disease reported from Dandimal and Khoorda.
		Pipli	...	4·50	
		Gope	...	3·10	
		Khoorda	...	7·50	
		Banpore	...	1·55	
	41	Balasore	„ 19, '91	3·08	Weather—stormy. Except in the low lands of Bhadrak subdivision, crops are generally doing well.
CHOTA NAGPORE					
South-West Frontier Agency.					
CHOTA NAGPORE DIVN.	42	Hazaribagh	Sept. 19, '91	7·33	Heavy rain all over district except south-west. Good prospects of bumper *bhadoi* and rice crops.
		Giridih	...	1·42	
	43	Lohardugga	„ 19, '91	4·32	Weather—seasonable. Plenty of rain. *Gora* rice is being harvested. Sowing of *oorid* finished, and that of *sergooja* (oil-seed) commenced. Prospect of winter rice favourable. Fodder and water plentiful.
		Palamow (up to 14th)		1·04	
	44	Singbhoom	Sept. 19, '91	1·71	Weather—seasonable. State of crops excellent. Common rice sold at 16 seers per rupee at last Chaibassa market, and 13 seers in the Kolhan. Special road works stopped, not being needed. No new cases of cattle-disease reported.
	45	Manbhoom	„ 19, '91	4·88	Weather—seasonable. State and prospects of crops continue satisfactory. Price of rice stationary. Fodder and water-supply sufficient.
		Govindpur	...	0·26

* Mean of 6 days. | † Mean of 5 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 19th of September 1891.

Humidity: Average at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	District observations, Rainfall, Of week: Mean for district.	Of week: Normal mean.	Since 1st of month: Mean for district.	Since 1st of month: Normal mean.	Since 1st of month: Variation.	Since 16th May 1891: Mean for district.	Since 16th May 1891: Normal mean.	Since 16th May 1891: Variation.	Of week: Average number of rainy days.	Of week: Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—..... indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 22nd September* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING SATURDAY, THE 19TH OF SEPTEMBER 1891.

QUITE at the close of the previous week a small barometric depression had again formed in the north-west angle of the Bay, which on the 12th, or the last day of that week, had passed inland, crossing the coast near Balasore, and on this day its centre was to the north-west of Balasore or to the south-east of Chybassa. The small storm brought up rather heavy rain to the districts through which it passed, while some stations to the south of the path of the centre received particularly heavy rain. On the 13th the depression had again advanced in a north-westerly direction, and its centre was in the extreme west of the province, probably in the west of Chutia Nagpur. It continued its advance on the following day when it reached Jubbulpore, where it apparently filled up and disappeared, for its existence was scarcely evident on the 15th. The monsoon current brought up in the rear of the small storm was however feeble, and the rainfall given by it was light though fairly general. Conditions then remained of ordinary light monsoon character up till the 16th, when the easterly element in the wind directions decidedly fell off in force, winds becoming southerly over a large part of the province, while at some of the western stations they were even westerly. This apparently was brought about by the strengthening of a westerly wind current, and this at once caused interaction and consequent heavy rainfall, and on the 16th and 17th heavy rain was reported at all the western stations and at many of the northern stations. On the 17th, also, winds showed a tendency to cyclonic circulation in the north-west angle of the Bay and of indraught to the sea area off the Orissa and Ganjam coasts, but this did not develop, and on the 18th a feeble area of low pressure drifted over Ganjam, and again rather heavy rain was received in Orissa. On the 19th conditions in the Bay began to change; a rapid rise of pressure took place in Orissa and along the mid-west coast of the Bay, and a moderate rise in Bengal, so that generally the differences of pressure over the Bay became very small. At the same time a rather rapid fall of pressure set in at Rangoon and Moulmein, and winds became north-westerly in Lower Burma, and it thus appeared possible that a barometric depression with its attendant cyclonic circulation of winds was crossing Tenasserim towards Lower Burma. Over the Bay generally at this time, however, very light monsoon conditions were generally obtaining.

Conditions therefore during the week have been fairly favourable for rainfall, and in Behar and North Bengal in particular fairly good rain has been received, the amounts being larger than those normal for the week; but in other districts the falls have been rather smaller than usual.

Pressure.—The variations of pressure during the week have been large. On the 13th it had risen rapidly at the southern and south-western stations and less rapidly elsewhere; the large changes being due to the advance of the small depression to the extreme west of the province. The increase continued on the 14th, but by smaller amounts; but on the 15th a fall set in which continued on the 16th. On the 17th pressure was again rising, the increase being rapid at the northern stations and less rapid towards the south and south-west of the province; and on the 18th again pressure had risen, the increase being largest in the east of the province, where at Silchar it equalled 0·12″, while in the south-west of the province the rise was small. On the 19th the rapid rise had extended to Orissa and to the south-western districts generally, and on this day the distribution of pressure had entirely changed, the highest pressure being reported in North-East Bengal, and the lowest in Burma and in Orissa and Ganjam. In Bengal on this date pressure was at many stations a tenth of an inch in excess of the normal. For the whole week the mean pressure has been slightly above the normal, the excess generally equalling from 0·01″ to 0·04″. In Assam the mean excess has been 0·011.″

Temperature.—The changes during the week have also been moderately large, but on the whole the temperature has been nearly normal. Thus a slight excess averaging a little over half a degree has been shown in the mean temperature of North and South Behar and South-West Bengal, and a defect, but of rather smaller amount, in the mean temperature of Chutia Nagpur, Orissa, and North Bengal. In East Bengal temperature has been absolutely normal. For the whole province the mean temperature for the week may therefore be said to have been about 0·2° above the normal. In Assam, on the other hand, a defect of 0·03° has been registered.

Rainfall—Has been in excess of the normal in Orissa, North and South Behar, and in Chutia Nagpur. It has been almost normal in North Bengal, and moderately below it in South-West and East Bengal. The districts of Orissa, North Bengal, and Chutia Nagpur have received between two and three inches of rain, those of East Bengal and North and South Behar between one and-a-half and two inches of rain, and South-West Bengal an average amount of only 1·30 inches of rain. It is noticeable that this week North and South Behar have received falls above the average for the first time for some weeks, while also for the first time for many weeks North Bengal has received a fall nearly equal to the normal. The distribution of the rainfall has, however, been rather irregular in the various divisions, and thus the following districts have received falls during the week which are very decidedly defective :—Burdwan, Beerbhoom, Nuddea, Mozufferpore Durbhunga, and Gya.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 19th of September 1891:—

Meteorological Divisions.	Temperature.						Rainfall.									
			Averages for week.				Of week.			Rainy days.			Since 1st of month.		Since 16th May 1891.	
	Highest observed during week.	Lowest observed during week.	Of highest of each day.	Of lowest of each day.	Of mean for each day.	Average mean of week above or below normal mean of week.	Average. The total fall from 1st January to 19th September 1891	43 70
The average fall of the corresponding period for 24 years, S.-G.'s Office ..	55 53

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast, g, gloomy, d, drizzling rain; t, thunder; p, passing temporary showers; ⏝, dew

J. H. GILLILAND,
For Meteorological Reporter to the Govt. of India

RESOLUTION ON THE GENERAL ADMINISTRATION REPORT OF THE CHITTAGONG DIVISION FOR THE YEAR 1890-91.

GENERAL DEPARTMENT—MISCELLANEOUS No. 1159.

Darjeeling, the 21st September 1891.

RESOLUTION.

READ—

The Annual General Administration Report of the Chittagong Division for 1890-91.

Tours and inspections.

The post of Commissioner was held during almost the whole year by Mr. D. R. Lyall, C.S.I., but he was absent for two short periods on privilege leave and on special duty in the Lushai Hills, and on 2nd March he took furlough and made over his office to Mr. Oldham. These changes interfered somewhat with the Commissioner's tours, which occupied only 54 days in the year, a most insufficient period. The two outlying sub-divisions in the Tippera district, and that in the Chittagong Hill Tracts, were not visited at all. The Lieutenant-Governor considers it necessary that every sub-division should be visited by the Commissioner as well as by the District Officer at least once a year.

The districts of Chittagong and Tippera were thoroughly gone over by their respective Collectors, as also was that of Noakhali, thanks chiefly to the energy of Mr. D. J. Macpherson, who took over charge on the 30th December, and proceeded to visit all parts that had not been seen by his predecessors. One of the latter seems to have neglected his duties by not moving from head-quarters during the five months he held the district. The tour of the Sub-divisional Officer of Cox's Bazar only extended to 45 days. The district offices of Chittagong and Tippera were fully inspected by the Collectors, but the inspection of the Noakhali office was left incomplete. The Lieutenant-Governor desires it to be understood that he expects all officers to conform to the standing orders which require them to make half-yearly inspections of their offices.

Weather and crops.

2. The chief features of the year were the heavy rains up to the end of October, and the continued drought from that time to the third week in February, followed by excessive rain up to the end of March. The result was a poor *rabi* crop, and a general average of 15 annas on the autumn and winter rice crops combined. The cultivation of jute was somewhat extended owing to the previous crop having been a good one: but in the year under review the outturn, though fair on the whole, did not come up to the expectations at first formed, and the price exhibited a most remarkable fall, described by the Commissioner as "unprecedented, and telling on many branches of the Administration." The rapid decline of the price of this product may almost be said to be the key-note of the report, and appears constantly as an explaining factor of various phenomena, but no attempt is made in the Report to arrive at the causes which led to it. Broadly speaking, it would appear to have been due to over-production arising from a favourable season in the preceding year.

Public health.

3. The town of Chittagong was attacked by a severe epidemic of small-pox, which spread to the interior of the district, raising the total number of deaths from that disease as returned from 3 in the previous year to 363. Some figures have been submitted by the Civil Surgeon, which show the percentage of fatal cases on total cases to have been only 4·4 where patients were protected by vaccination, against 38·0 where there was no such protection. The data for these figures are rather doubtful, but it is very unsatisfactory to find that 34 people who were asserted to have been successfully vaccinated a short time before should have died of small-pox. This must have increased the prevalent prejudice against the efficacy of vaccination, and, as a natural consequence, it is reported that inoculation was very largely resorted to. This is not the only case in which complaints have been received as to the quality of the lymph supplied by the Vaccination Department.

A more important item in the health of the division, as affecting the public generally, is the increase, especially in the last three years, in the mortality from fever. The figures are as follows:—

	1888-89.	1889-90.	1890-91.
Chittagong	17,472	20,287	22,958
Noakhali	17,487	21,368	22,816
Tippera	19,104	23,209	25,650
Total ...	54,063	64,864	71,424

The remarks of Mr. Macpherson, the District Officer of Noakhali, on this subject are worth quoting, although they do not attempt to explain the facts. They are as follows:—

"The district seems to be going from bad to worse as regards fever. The recorded mortality this year is higher than it has ever been, and it has almost doubled within the decade. No doubt part of the increase is due to increase of population and better registration, and this is sufficient to account for nearly all the increase observable up to three or four years ago; but within the last three years there is a sudden increase of 63 per cent. over the average of the preceding three years that must be almost entirely attributed to deterioration in the material condition of the district. The recent deterioration is observable in every part of the district, but in the islands more than on the mainland, and in the central part of the district more than in the Feni and Lukhipur directions. In every thana, except two, the mortality was greater this year than last."

In spite of this mortality the population goes on increasing, and has now risen to the height of 948 per square mile in some parts of the division Apart from this liability to fever, the material condition of the people throughout the division appears to betoken general prosperity.

Trade and Commerce.

4. The sea trade of the Port of Chittagong shows a slight falling off in comparison with the preceding year (the best on record), as will appear from the following table:—

	Number of vessels entered	Tonnage.	Value of trade.
			Rs.
1889-90	2,048	477,560	3,16,96,588
1890-91	1,977	446,922	2,87,72,255
Decrease ...	71	30,638	29,24,333

The decrease was due to the decline in jute exportation. The decrease in export of this commodity alone, the greater part of which may be assumed to be by sea, is calculated at 126,610 cwt, valued at Rs. 21,16,198.

It is reported that the Kutubdia light is not sufficiently powerful. The matter had long been under consideration in the Public Works Department of this Government, and another full-powered light has been obtained which will obviate all complaints.

The course of trade in Tippera was only remarkable, as in the case of Chittagong, for a large falling off in the transactions in jute. The Commissioner writes that the price of jute in Tippera fell from Rs. 5-8 to Re. 1-8 a maund: that in some places the cultivators are reported to have left the jute uncut in consequence, but that no actual distress was felt, though the extraordinary fall affected considerably the revenue administration of the district.

Civil and Criminal Justice.

5. Much inconvenience is said to have been felt for want of an officer exercising magisterial powers on the Island of Sandip. The matter is at present under the consideration of Government, and arrangements will shortly be made to provide an officer vested with magisterial powers. The formation of the new frontier district, the South Lushai hills, and its transfer to the frontier police, were virtually effected during the year.

From the following table, which gives the figures of suits instituted in the Civil Courts, it will be seen that there was a decline both in number and value as against the preceding year:—

	Number.	Value.
		Rs.
1889	55,870	39,65,508
1890	53,363	31,66,403
Decrease ...	2,507	7,99,105

The decrease was consistent throughout as regards the different classes of suits, with the exception of title and miscellaneous suits which increased slightly in number, though without a corresponding increase in the value. The prosperity of the people and the "extraordinary state of the jute market" are the alleged causes of the decrease. The slight increase in title suits is said to be due to the fact that the Civil Courts have held that transfers of occupancy rights by sale are invalid without the landlord's consent—a decision which has induced the landlords in Tippera to institute suits contesting such transfers. The Commissioner has rightly pointed out that the decrees of Civil Courts do not run in the Hill Tracts, and has stopped the custom of executing them as a matter of course. It is very important to preserve the simplicity of this frontier district, and to protect it from the invasion of technical law.

There was a slight increase in cognizable and non-cognizable crime, from 15,713 to 16,894 cases, and a considerable improvement in the percentage of convictions.

The reports on some of the Honorary Magistrates are not favourable, and it appears that the Magistrates in this division, headed by the late Commissioner, view their work with disfavour, and wish to confine it in consequence as much as

possible. The Lieutenant-Governor agrees with Mr. Oldham that the way to improve the character of the Benches is to extend their powers where practicable, and so make them feel their responsibility. In the one district of the division in which complaints have been made over to Honorary Magistrates for preliminary sifting, the experiment is reported to have been successful.

Census.

6. The Magistrates of each of the three regulation districts of the division speak with unmixed satisfaction of the conduct and results, as far as those results can be at present estimated, of the late census operations. The desire of the voluntary agency to carry out the work successfully is spoken of with appreciation, and it appears that the opportunity to turn the operations into a means of fraud and extortion was made use of only to a very limited extent, and in the one case specifically mentioned, with very disastrous effects to the culprits, who were convicted, and the ringleader sentenced to four years' imprisonment.

Registration.

7. An increase is shown of 10,875 documents or about 7 per cent. Such small fluctuations do not require explanation, and it is unnecessary to attempt to explain them by good harvests or fall in the price of jute or rice.

Land Revenue administration.

8. The figures given with reference to the collection of land revenue are insufficient. The collections in the Chittagong district were bad, being only 89·1, presumably on the total current and arrear demand. The balances are described under three classes—I, II and III, but there is nothing to show what these classes are. In future reports the current demands and realizations, the arrear demands and realizations, and the balances of each kind should be clearly set forth together, district by district, in one statement. It is observed that the percentage of balance under class III, which is believed to mean Government estates, is as high as 16·40. The Lieutenant-Governor regards this large balance as very unsatisfactory.

Survey and Settlement.

9. The Chittagong settlement operations were in charge of Mr. Slack throughout the year. The survey of thana Ramu in the Cox's Bazar sub-division was completed, and the draft records of rights of 43 villages, and the final records of 12 villages, were published, the cost incurred being just over eight annas per acre for both survey and settlement. In the Sudder sub-division 687 square miles were traversed, and 482 cadastrally surveyed, and records prepared of 74 villages comprising 43,666 acres. The increase of revenue from the operations in the two sub-divisions has been estimated at Rs. 1,52,000.

Wards' estates.

10. Figures should be given showing the demand and collections, current and arrear, with balances, for each estate under the Court of Wards. The statistics in the report are very slight. It appears that in Chittagong the two most important Wards' estates are those of the Chakma Chief and of Latifa Khatun. In these the percentage of collections on the current demand were fair, but there are large balances outstanding. In Noakhali it is reported that the percentages of collections on the demand have decreased, but no figures are supplied from which any idea of the balances can be formed.

Excise and Stamps.

11. The Excise revenue in the district of Chittagong shows a decline of no less than Rs. 16,520, namely, from Rs. 1,49,798 in 1889-90 to Rs. 1,33,278 in the year now dealt with. The Commissioner writes—"The whole of this is due to the decrease in the opium revenue. Though the Collector gives no explanation of this continued decrease, it is clearly due to the same cause which reduced the revenue in 1888-89, *i.e.*, the restriction of sales all over the district, so as to prevent smuggling into Arakan." The decrease referred to by the Commissioner was in 1889-90 (not in 1888-89), and amounted to Rs. 49,250, being then accounted for in almost the same words. The Lieutenant-Governor observes that in 1888-89 there was an increase in the Excise revenue of Rs. 23,102 in this district, and the report on that year stated as follows:—"The large increase in Chittagong is almost entirely due to opium, and is the result of a series of orders restricting the quantities sold. Government loses the price of the decreased quantity sold, but gains by the higher license fees." The subject is one of importance to the Chittagong Excise

administration, and demands more accurate consideration than appears to have been given to it.

The Division shows also a decrease of Rs. 40,650 in the revenue from court-fee stamps; this decrease, which is only 4 per cent. on the whole receipts, does not require explanation. One District Officer ascribes it to agricultural prosperity: another to agricultural depression, *i.e.*, to the often quoted collapse in jute.

Education.

12. In the Resolution on the report for the year 1888-89, the paragraphs under the head of Education were declared to be far from satisfactory. The Lieutenant-Governor regrets to observe that the present report shows no improvement in this respect. The figures given are disconnected, insufficient, and, as far as the several districts are concerned, quite devoid of uniformity, and fail to convey any idea either of the extent, or of the progress or retrogression of the different grades of education. The report should show clearly the number of schools of each class and the number of pupils, both in the year reviewed and in the preceding year, or even the four previous years. With this object a set of tables will be prescribed in subsequent orders.

It is gathered from the present report that on the whole education, both of boys and girls, has made fair progress. The Commissioner observes that the stipendiary pathsalas are said by the Magistrate of Tippera to be the most efficient, and that this opinion is shared by nearly all Magistrates. The Government is opposed to an extension of the system of purely stipendiary payments, and prefers the plan of giving a very small stipend, not exceeding Rs. 2, as a retaining fee, and supplementing it by a payment for the results obtained in the examination of the pupils

The increase in the Chittagong Hill Tracts, from 16 schools with 255 pupils to 36 schools with 537 pupils, is noticed with pleasure.

Hospitals and dispensaries.

13. The figures given regarding the dispensaries at Chittagong and Cox's Bazar are not those by which the working of those institutions are usually tested, and a suitable set of tables will be prescribed for next year's report. The Lieutenant-Governor sees with pleasure that the Chittagong District Board are maintaining a Lady Doctor for the hospital at the district head-quarters. The District Board of Tippera is doing excellent work in this direction; no less than ten local dispensaries having been opened during the year at their expense, aided by local subscriptions, of which a fixed amount is made a *sine quâ non*. In Noakhali the District Board does nothing towards dispensaries. The Lieutenant-Governor agrees with the Commissioner that the Sadar dispensary should at least receive some support from that quarter. On the other hand this Board, like that of Chittagong, has provided for medical attendance to women.

Conduct of zemindars.

14. The Lieutenant-Governor will be glad to learn the outcome of the public-spirited offer of the Nawab Faizanessa Saheba to build a female hospital in Comilla under the auspices of the Lady Dufferin Fund, and desires to express his high appreciation of the good work this lady has performed during the year in subscribing Rs. 1,000 to the above Fund, and in defraying the whole expenses of a local dispensary near her own residence.

15. The Lieutenant-Governor desires to express his thanks to Mr. Lyall and his successors in office for their careful administration of the Division. A copy of the remarks on the characters of the other officers will, as usual, be forwarded to the Appointment Department of this Government.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

RESOLUTION ON THE GENERAL ADMINISTRATION REPORT OF THE BURDWAN DIVISION FOR THE YEAR 1890-91.

GENERAL DEPARTMENT—MISCELLANEOUS No. 1158.

Darjeeling, the 21st September 1891.

READ—

The General Administration Report of the Burdwan Division for the year 1890-91.

The Burdwan Division had the advantage of being in the hands of one officer, Mr. Toynbee, throughout the year. In most of the districts also the continuity of administration was greater than usual. It is well known that it is the desire of Government to avoid constant changes in divisional and district appointments, but circumstances from time to time render transfers of charge unavoidable.

Tours.

2. The Commissioner was on tour for 107 days and visited every district, and all the sub-divisions but one. The District Officers of Bankoora failed to make proper tours, but the officer chiefly responsible has left the service. In Midnapore the brief deficiency in the Collector's tour was attributable to illness. The separate report promised in regard to the touring of the Sub-divisional Officer at Raneegunge is awaited. The Lieutenant-Governor attaches great importance to well arranged touring: he looks on the periods of touring laid down as irreducible minima, and he will not overlook any failure to fill up these periods in future. Officers should understand that they are expected to tour at intervals throughout the year, and not only in the cold weather. The failure on the part of certain District Officers to inspect their offices has been noticed by His Honour, and explanations will be separately required. Constant inspections of the work of subordinates is essential, if it is to be kept up to date and irregularities are to be prevented.

Weather, crops and public health.

3. The rainfall was generally above the average and in most districts well distributed, so that the crops, and especially the rice harvest, were successfully garnered. The estimated outturn of the rice is given at nearly 16 annas for the division, a marked improvement on 9 and 13 annas of the two preceding years. The average price of rice for the division is stated to have been 16 seers 7 chittacks the rupee, an improvement by a seer from the previous year, but not so favourable as the rate of 18 seers 11 chittacks in 1888 89. The wages of labour remain stationary. The public health is said not to have deteriorated. An increase in the number of deaths in Howrah is accounted for by better registration, while an outbreak of small-pox in the Sudder station of Midnapore caused 2,486 deaths. As there was a decrease in the number of persons vaccinated in this district, these circumstances require special investigation. There was no unusual physical distress in the division, but the Commissioner regrets that even in this division, where civilization is considered to have made more progress than elsewhere, there is a low standard of personal comfort, and that the people do not possess the faculty of advancement. The Lieutenant-Governor does not share this regret. What the country requires is thrift and the widely-distributed accumulation of capital, and he considers that nothing could be more disastrous at the present stage than a general desire for a more expensive mode of living.

Trade and manufactures.

4. There were the usual fluctuations in the outturn of various articles of trade and manufacture, for which it is impossible to assign any single dominating cause. Thus in Burdwan the value of the silk produce fell from Rs. 1,67,333 to Rs. 1,47,935; it diminished also in Bankoora: in Beerbhoom, on the contrary, the quantity rose from 32,000lbs. to 35,050lbs; and in Midnapore the increase of the last two years was again sustained. Stick-lac in Bankoora fell from 26,500 maunds to 15,000. The Burrakur Iron Works, under a private company, employed 1,200 hands, and turned out pig-iron and castings valued at Rs. 6,13,066 against Rs. 5,40,000 of the previous year. The returns furnished by the proprietors of the several Iron Works at Howrah are incomplete and should have been properly filled up. Cotton cloth was produced in Burdwan to the same extent as last year, but in Hooghly the outturn was not 25 per cent. of that in 1889-90. The

Burdwan coal mines have not maintained the large output achieved in that year, but they still employ about 12,600 work-people. A reduction in the rate of freight of coal is said to be the desideratum. The export of lime for this district also diminished by half—from 9,40,326 to 4,66,815 maunds. It would have been more satisfactory if the trade in food-grains had been examined for the whole division systematically, as it is impossible to draw general conclusions from the remarks recorded for the districts separately; such as "the exports of cereals show a slight increase"—"there was a further falling off in the export of rice"—"there has been a brisk trade in rice"—"more rice was imported." The Commissioner will be asked to treat this subject in a more comprehensive manner in his next report.

Administrative changes.

5. There were no important changes in the administrative arrangements of district work during the year. Two Magisterial Benches in Bishenpore and Bankoora were made independent, and certain powers were conferred upon the Bankoora and Tumlook Honorary Magistrates. The termination of the Joint-Managership of the Burdwan Raj Estate, upon Mr. Reily's transfer to the Orissa Survey and Settlement, took place during the year, leaving Lala Ban Behari Kapur sole Manager with two assistants. The number of Mahomedans in superior service in the division has decreased from 460 to 356, but this is evidently the result of a revision of the classification in the Hooghly district, where the number in superior service is said to have fallen from 195 to 60, while those in inferior service are 241 as compared to 141 in 1889-90. On the whole the Mahomedans hold 21·56 per cent. of the appointments, though they are only 15·21 of the population. It should be thoroughly understood by this time that Government are desirous that Mahomedans should receive a fair share of the appointments, but cannot insist on their being given appointments for which they are not qualified by education.

Police.

6. There was a decrease in cognizable and an increase in non cognizable crime. The Commissioner attributes this result to the prosperity of the year, which gave the people more time and more money to spend on vexatious litigation, and caused them to commit fewer offences against pr p rty. The variations in the statistics depend to some extent on the personal views of the different officers, otherwise there is no reason why, for instance, the proportion of false cases reported should be 1·8 in one district and 9·9 in the next. Some explanation might have been given of the fact that in Burdwan the Sessions trials show 81·4 per cent. as acquittals. The Police administration in Bankoora is described as unsatisfactory by the Commissioner, who has special experience of the subject and will doubtless continue to give it his special attention. The Government of India have approved the recommendations of the Police Committee for making police service more attractive in Burdwan and Hooghly, which were adopted by this Government; these recommendations were to raise the pay of the last grade of constables, to increase the clothing allowance, to give recruits a free kit, and to abolish the superannuation subscriptions. The Lieutenant-Governor does not expect as much from the rural as from the regular police, but he looks to District Officers to make the best they can of the material at their disposal. He notices with pleasure the account again furnished of the constant supervision given by Mr. Munro, District Superintendent of Police in Midnapore, to the village police, and of his system of distributing rewards for good work on their part.

Criminal Justice.

7. In this division there are 459 Honorary Magistrates who afford great help to the administration. They disposed of 9,157 out of 24,641 cases decided in the year. The majority of the cases may be petty and the orders non-appealable, but the fact that native gentlemen can be found ready and willing to give their time to such work is encouraging, and the Commissioner writes favourably of the work they perform. The irregularity of their attendance, however, requires correction, and the opening of attendance registers is a step in the right direction. The balance of outstanding fines in the division has fallen from Rs. 35,274 to Rs. 29,195. This is a matter which requires continual check by comparison of the court and thana registers. The Lieutenant-Governor presumes that Commissioners and District Officers in their inspections of subordinate courts insist on the Deputy Magistrates scrutinizing the fine balances regularly.

The Lieutenant-Governor notices the absence from the Commissioner's report of statistics of criminal justice, such as are supplied *mutatis mutandis* for civil justice. He desires that in each future report a statement may be furnished as an appendix to the report, showing for each sub-division the number of cases disposed of by each paid and Honorary Magistrate. When all the divisional reports for 1890-91 have been reviewed, orders will be issued regarding the form in which they are to be cast, and the tabular statements they are to contain in future.

Land Revenue.

8. The percentage of total collections of the land revenue has increased from 93·48 to 95·17, but the balance outstanding amounted to Rs. 4,07,768, which the Lieutenant-Governor considers anything but satisfactory. The arrears amounted to Rs. 3,04,520 in Midnapore, where the ryots are said to have suffered considerably from bad seasons and defective drainage; and to Rs. 79,025 in Burdwan, for which no reason but floods has been assigned. It should always be stated clearly whether these balances are due from permanently or temporarily-settled estates, or from Government estates. The Lieutenant-Governor has recently taken measures, which he trusts will have the effect of diminishing these balances, as they have led to unfavourable comments on the land revenue administration of a province for the most part permanently settled. He intends to support the Revenue authorities in requiring the proper observance of the kist day as the last day of payment. His Honour has lately had an opportunity of inspecting the drainage accounts in Hooghly, and has given the necessary orders for the exercise of proper supervision. The collection of only 69 per cent. of the canal water-rates due in Midnapore, leaving a balance of Rs. 68,624, and requiring the issue of an enormous number of certificates, is a serious matter in which improvement must be effected. The irrigation from the Eden canal fell, in consequence of a good rainfall, from 29,080 to 3,989 bighas. The landlords' fees payable on transfers of certain tenures under the Tenancy Act are to a large extent, it has been ascertained, refused by the landlords, and therefore paid into deposit. This addition to the number of petty sums dealt with in the accounts affords a new source of embezzlement, and it is important that District Officers should be warned of this and required to scrutinize the registers and subsidiary cash-books carefully from time to time. The remittances of land revenue by money-order rose from 21,000 for Rs. 1,34,044 to 24,956 for Rs 2,3·,062; these facts afford testimony that the system may be regarded as well established and popular. A similar system for the payment of rent has made a commencement with 7,776 orders for Rs. 66,455.

Settlements and Government estates.

9. The Lieutenant-Governor was already aware that the Survey and Settlement of the Burdwan Raj khas mehals have not progressed satisfactorily. There was much friction between the ryots and the Raj people, and neither the Managers nor the Settlement Officers can be said to have handled the cases properly. He joins in the hope expressed that the Hukumapore and Sujamutha settlements will be concluded before long. The operations, owing to delay and mismanagement, have proved very expensive.

Stamps, Income-tax, and Excise.

10. The Stamp revenue increased by Rs. 11,253, mainly in judicial stamps, and the income-tax demand by Rs. 10,627. "The tax," it is said, "is coming to be regarded as an institution, and people are beginning to find out that it is better to pay and have done with it, than to pay fees and costs on vexatious objections." The excise revenue has fallen off by Rs. 69,806 in consequence of the abolition of the outstill system; but separate figures are not given to show what the fall in the revenue from country spirits was, and whether the revenue was at all recouped from other items. In one district an alarm of illicit manufacture on a large scale has been raised, but more specific information is required. It has been found necessary to allow some outstills in jungly tracts where illicit distillation cannot otherwise be prevented.

Communications.

11. No important original works have been undertaken, and the tramway between Jagatballabpur and Ampta in the Howrah district has still to be commenced. The Commissioner writes that repairs continue to swallow up the greater part of the income of District and Local Boards, leaving little to be spent on

original works. But this statement is not quite borne out by his own figures, which show Rs. 1,18,055 expended on original works, and Rs. 3,93,769 on repairs. With regard to the state of the roads, the only fact mentioned is that in Burdwan they are considered to have deteriorated. The allotments for village roads were cut down, and the expenditure fell from Rs. 34,710 to Rs. 30,818. The Lieutenant-Governor is aware of the danger of money being wasted on these small paths. But an allotment from the District Fund often acts as a nucleus for public subscriptions, and it is very undesirable that expenditure on village roads should be altogether stopped.

Education.

12. The schools and scholars increased in numbers in four out of the six districts of the division. There were 2,542 more scholars in Bankoora, entirely in schools under the District Board, and there was a small increase in primary schools. The girls' schools rose in number from 269 to 291, but the girls upon the rolls were 6,696 as compared with 7,659 in 1889-90. The diminution was chiefly in Hooghly, viz., from 2,371 to 1,137. The Lieutenant-Governor would be glad next year to have a fuller review, as well as fuller statistics, of the primary education of the division for which the District Boards and District Officers are more particularly responsible. It is not satisfactory to hear of a falling off in Midnapore a second year, and no suggestions appear to have been made for the application of a remedy there or in Beerbhoom. Sonthali education in Midnapore seems also to be retrogressing; three of the four training schools for gurus have been closed there, and, as the Commissioner remarks, the performance of the Midnapore college students in the University Examinations was not particularly creditable to that institution.

Local Self-Government.

13. The Commissioner finds a difficulty in expressing any decided opinion on the present aspects of Local Self-Government in his division. He is right in his view that the controlling officer will do most good by co-operation without interference, and the Lieutenant-Governor attaches great importance to the timely exercise of tact and influence on the part of those to whom the people, even in the most advanced districts, will probably long continue to look for guidance and advice. At the same time he will insist on local bodies invested with statutory powers recognising and fulfilling their responsibilities, and he expects Commissioners and District Officers to inspect the working of municipalities closely, to examine into their assessments, collections and expenditure, and to bring to the notice of Government important cases in which powers are abused, and opportunities of doing good public work are neglected. The Lieutenant-Governor has noticed with dissatisfaction the defective report referred to by the Commissioner in his paragraph 164.

The Magistrate of Hooghly has reported the keen interest taken by the public in the municipal elections and in the selection of persons for nomination, and has favourably mentioned the following persons :—"Baboo Lalit Mohan Singh, Vice-Chairman of the District Board; Baboo Shib Narain Mookerjee, Chairman of the Utterpara Municipality; Dr. Barker, late Chairman of the Serampore Municipality; Baboo Eshan Chunder Mitter, re-elected Chairman of the Hooghly Municipality; and Baboo Nalinaksha Bose, Rai Bahadur, re-elected Chairman of the Burdwan Municipality and Vice-Chairman of the District Board—most of whom have been before commended."

The drainage works contemplated in Howrah and Serampore and approaching completion in Howrah and in Utterpara should prove very beneficial to those localities. Sir Charles Elliott will always be ready to lend such assistance as Government can properly afford to such undertakings.

Miscellaneous.

14. It is stated in the report under review that some of the Rural Sub-Registrars on the line of rail are said to be too fond of closing their offices and running down to Calcutta without leave. It is not clear whether Mr. Veasey believes this assertion to be true, and endeavours should be made to verify rumours current in such matters.

It appears that no free licenses were issued under the Arms Act for the purpose of destroying wild animals. The views of the Government of India on the subject of the loss of life from wild animals have been promulgated, and Sir Charles Elliott desires that more attention may be paid to this subject in future.

The Commissioner's observations on the subject of cattle-pounds are important and should lead to the adoption of the necessary remedies. He writes:—

"It cannot be said that the subject of pounds is at present on a satisfactory footing. With an increase in their number in every district but Bankoora, the receipts have risen nowhere, and the Local Boards, which now usually manage them, have not shown themselves successful. There is a want of care in selecting farmers, and recklessness, in Burdwan at least, in opening new pounds, which does not speak well for the supervision. With fifty more pounds open there is actually less money received, and there has probably been a good deal of speculation. This is one of the results of the system of farming, nor is it the only bad one."

Conduct of zemindars.

15. In Bankoora land is changing hands owing to the involved condition of the zemindars. The Commissioner rightly observes, with reference to Midnapore and the agrarian troubles there, that it is not always the landlord who is in the wrong. The recalcitrant character of the ryots in parts of this district has long been notorious. The Lieutenant-Governor would have been glad if the Commissioner, following the practice of his predecessors, had singled out by name the zemindars deserving of favourable notice, and desires that this practice may be adopted in future.

16. Mr. Veasey, having joined since the close of the year, has been unable to write his report from personal experience. Next year the Lieutenant-Governor will look to him to write with fuller knowledge, and to supply the statistics asked for above and a general review of the division as a whole, which will make his report more interesting. The remarks on the characters of officers will be communicated, as usual, to the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

RESOLUTION ON THE GENERAL ADMINISTRATION REPORT OF TH PATNA DIVISION FOR THE YEAR 1890-91.

GENERAL DEPARTMENT—MISCELLANEOUS No. 1202.

Darjeeling, the 24th September 1891.

READ—

The General Administration Report of the Patna Division for the year 1890-91.

The Patna Division was administered by Mr. C. C. Stevens and Mr. Kemble, each of whom held charge for just six months. Mr. Stevens' report deals sufficiently with every topic of any interest or importance, and would in some parts have been improved by condensation. Where he has furnished figured statements, he should also have had the totals added up for the division. Two Collectors, Mr. Bourdillon and Mr. Blyth, were almost continuously in charge of Saran and Champarun, respectively, but Patna had 2 changes and the other 4 districts had 3 changes each during the year; in 8 cases out of 16 the Sub-divisional Officer was not changed.

Tours.

2. The Commissioner being comparatively new to the division judiciously devoted himself to the inspection of head-quarters and sub-divisional offices, rather than to travelling through agricultural tracts, and did as much as could be expected during the time available. Mr. Currie's tour of only 50 days was altogether insufficient, and the excuses made for him are misplaced. It is surely unusual for a District Officer in Behar to allow himself to be beaten back twice in January

and March by stress of weather. The Collectors of Mozufferpore should have managed between them to complete the prescribed period of touring. With these exceptions, all the District and Sub-divisional Officers conformed with the standing orders. The Lieutenant-Governor does not wish to hamper them by definite orders whether they should make constant short excursions or long slow progresses. He expects them to inspect all their offices thoroughly and to spend the required period in camp. The varying circumstances of the season and the work in hand will determine the method and order to be pursued better than any rigid rules. It may not be possible for every Collector to inspect in detail the whole of his district each year, but any portion omitted one year should be visited during the next year if possible. The Lieutenant-Governor looks to District Officers to keep themselves thoroughly informed of all that is going on, whether they can actually go to each locality or not. The office inspections were deficient in Patna and Sarun; in the latter case sufficient explanation has been given. There is ample time during the remainder of the year for all officers to comply with the rules in force, and Sir Charles Elliott expects that they will be duly observed.

Weather, crops, public health, and condition of the people.

3. The rainfall was excessive both as compared with the average and with the previous year. The Commissioner's summary of the distribution of the rainfall is useful. Speaking generally, the past year opened favourably, but the rainfall in July was excessive, and the damage done to the Indian-corn and other bhadoi crops was very great. For the rice, however, the rain was very favourable; but in Sarun there were extensive floods, and in that district alone there was a really bad crop; in other tracts it was good and in some excellent. The cold weather crops were in most districts sown under favourable circumstances, and, though late in some parts, may be said as a whole to have promised well. But there was a good deal of untimely rain in March, which especially injured the opium and those crops which ripen earliest, and (more particularly in the southern districts) heavy storms of rain and hail of unusual size did great damage.

Some interesting figures are given to show the enormous value of the poppy crop to the ryots of the Sarun district, in which three-fourths of the poppy fields were double-cropped, producing early rain-crops as well as opium. The general result of the crops was an estimated outturn, on an average per district, of 10 annas of wheat and pulses as compared with 14 and 11 annas in 1889-90, and an average of 13½ annas of rice—the same as in 1889-90. The failure of the early rain-crop (the bhadoi) was severely felt, but importations of grain were large and kept down prices. Influenza was epidemic throughout the division. Mr. Stevens apparently has little faith in vital statistics, as it is uncertain whether the fluctuations reflect the variations of diseases or the activity of the recording agency. There was a marked increase of mortality from cholera, and small-pox also was rife, but it is said to be often confounded with measles. The registered death-rate in the towns is very high, indicating the necessity of proper drainage and improved water-supply. The condition of the people is said to have been affected by the failure of the *bhadoi* crops, and to have improved with the better results of the other harvests. It is very satisfactory to read Mr. D'Oyly's testimony, from an experience ranging over 32 years, of the amelioration of the poorer classes in Behar, which he ascribes, notwithstanding the increased density of the population, to the movement of the labouring classes for employment, and to the effect of the railway. The unprecedented floods in Sarun in August 1890 devastated about 600 square miles of country, necessitated relief works and agricultural advances, and inflicted damage which the ryots will require time to recover.

Trade, commerce, and manufactures.

4. In the Resolution on the Commissioner's Annual Report of last year, some notice was taken of the Collector of Gya's views on the subject of Government interference with the grain trade in times of scarcity. It appears difficult to convince Mr. Grierson of the unsoundness of the policy he advocates, viz., that because, in his opinion, trade is not really free, Government should checkmate the "corners" which the grain-dealers form. Mr. Stevens very properly describes this policy as mischievous and short-sighted, and only to be justified by extraordinary circumstances, such as the want of communications.

There is no fact more established by general experience in India than the readiness of traders to use any mode of communication, but more especially the railways, in order to throw in supplies where the crops have, more or less, failed. District Officers therefore must not expect, and traders need not fear, interference on the part of Government. A useful statement is furnished of the outturn of manufactures. The yield of indigo fell again from 55,440 to 50,206 maunds. There was also much less sugar produced. In spite of the weather, however, there were larger operations in saltpetre—crude, dissolved, and refined. There is probably a mistake, due to a misprint or other cause of error, in the conflicting statements in two different passages that tobacco is manufactured in Gya to the extent of 7,45,000 maunds or 51,000 maunds, although no tobacco is grown in Gya. In the absence of registration, no great reliance can be placed on the trade returns, and it is very probable that much of the traffic is counted more than once. The statistics of the Nepal trade, which are perhaps more to be trusted than others, show some curious fluctuations. The food-grains imported from that country have risen considerably; also the piece-goods and the cash to pay for the jewellery exported from India; but the imports of timber have fallen enormously. The exports to Nepal have also generally decreased, apart from the jewellery just mentioned. The attention of the Excise Department will be invited to the large export of 25,086 maunds of mahua across the frontier.

Crime, police, and criminal justice.

5. There has again been a slight increase in the cognizable offences in the calendar year, viz., from 28,383 to 28,844; but as non-cognizable offences have fallen by 639 cases, there is a net decrease of 178 cases in the division. The incidence of cognizable crime to population varies from 1 case to 248 persons in Patna to 1 case to 699 persons in Mozufferpore. The views expressed by the Commissioner in favour of the institution of prosecutions under section 211, Indian Penal Code, for false charges do not accord with those expressed by the Lieutenant-Governor in paragraph 12 of his recent Resolution on the Police Report for 1890, where he stated his objection to such prosecutions, except in the rare cases where the charges appear to be wickedly and maliciously false. He desires to encourage and forward the attempt to reclaim the Maghya Domes by keeping colonies of them under surveillance, but the success of the experiment is doubtful if they frequently contrive to leave the colonies for the purpose of thieving. The accounts of the chowkidars in Sarun and Durbhunga show in the one case considerable delay in their payments, and in the other a reprehensible absenteeism. In both respects the irregularities should be corrected. The conduct of the regular police is favourably reported on: their work might have been noticed at greater length. The number of persons brought to trial before the Magistrates increased from 39,840 to 40,090, and resulted in a fair proportion of convictions, viz, 62·8 against 61·9. A variety of causes acting in different directions combine to produce this result. Petty conservancy cases improve the percentage of convictions, whereas the absence of complainants, the compounding of offences, or press of work operate for acquittals.

Land revenue.

6. The increase in the number of estates by 876 in one year, due almost entirely to partitions, is a serious matter. It does not immediately affect the revenue demand, but it adds largely to the work of the officers and their establishments: so also the opening of 2,040 separate accounts in the year throws a heavy burden on the offices. The question whether some limit should not be applied to the facilities afforded for the separation of estates and accounts is engaging the attention of Government. The collections of the division as a whole amounted to 93·6 on the total demand—almost the same percentage as last year (93·8). There was evidently laxity in the Patna district. Bad weather in March, the unsuitable date of the March kist, the census and the floods in Sarun are other excuses offered for shortcomings. The Lieutenant-Governor hopes to find a considerable improvement in future years. The collection of only 78 per cent. of the Road cess demand is altogether inadequate. The use of money-orders for remittances of revenue continues to develop as much as can be expected. It has been properly held by the Board that a payment into a money-order office on the latest day is not equivalent to a payment into the treasury, and therefore does not protect the estates from sale for

arrears. Any other ruling would have caused immense confusion, whereas it is easy for zemindars to pay by money-orders in time to satisfy the requirements of the law. The statement that the sale laws have been worked very leniently must be read in conjunction with the figures of the arrears. A just requirement of the Government demand comes before leniency. Mr. Stevens has made some important remarks on the complaints of the inefficiency of the certificate procedure, and is right in attributing the fault to the officers rather than to the system. The Lieutenant-Governor fully concurs in his view that the registers are not sufficiently used as helps in controlling the progress of the work. The subject has attracted His Honor's attention on tour, and an improved form of Register 10 has been suggested. Full use has not yet been made of the Tenancy Act anywhere, the receipts required by the Act are by no means generally adopted, and the ryots are learning their rights but slowly. The relations between landlords and tenants are so far good that, with few exceptions, no serious manifestations of ill-will have been exhibited. The proposal for a general survey and record of rights throughout the division, which has been under consideration for the last two or three years, has assumed a more definite shape since the close of the year. The arrangement for the liquidation of the heavy debts due from the Deo Encumbered Estate to the Maharaja of Durbhunga is creditable to all concerned.

Miscellaneous revenue.

7. The excise revenue fell by Rs. 2,62,035 in the division, of which almost the whole loss, viz., Rs. 2,57,410, was under the head of country spirits. For this result various causes are assigned, of which the combination of the abkars against the present policy of Government is doubtless the chief; but the raising of the upset prices, which caused a large diminution of the number of shops from 930 to 638, must have conduced to this result. The stamp revenue shows a decrease of Rs. 63,401 compared with last year, almost entirely on account of court-fee stamps, fewer civil suits having been instituted. The final demand on account of income-tax fell from Rs. 3,97,664 to Rs. 3,96,698, but the collections were only 88 per cent. of the demand, leaving an outstanding balance of Rs. 57,858. The lateness of the assessment is attributed to the deputation of the assessing staff and Deputy Collectors to census work. This is another illustration of the way in which the census interferes, or is alleged to interfere, with the ordinary work of the administration. There was no special complaint against the working of the Income-tax Act.

Irrigation.

8. The area irrigated by the Patna, Gya and Shahabad canals was less in 1890-91 than in either of the two preceding years. The collections in Gya and Shahabad were higher than before, reaching 70 and 83 per cent., respectively, though these figures are much lower than they should have been. But the collections from the Patna Canals were only Rs. 52,629, while the balance reached Rs. 93,744. There must be something very wrong about the procedure if year after year the arrears are not diminished and the current demand is not wholly realised, and it is not surprising to hear that probably a change of system will be necessary. The Commissioner should lose no time in probing this discreditable state of things to the utmost. The whole system of canals and irrigation has been framed on much too costly a basis for the country, and it is therefore the more incumbent on all connected with the management to realise the canal revenue demands as fully as possible. The Sarun Canals, of only 19 miles in length, have never paid their way, *i.e.*, the cost to Government has always exceeded the income guaranteed, and the guarantors have now declined to renew their engagement. An agreement, which will admit of the canals being kept partially open, has, however, been made with Mr. Reid of Maniari, who has always taken much interest in the scheme, and will soon be formally concluded.

Communications.

9. Considerable progress has been made during the year in respect of communications. A branch line to Sitamarhi was opened, and its extension to Maniari is still under construction. Sufficient waterway was not originally allowed in the embankment, and has had to be provided since. Various other branches are asked for by the people who show that they fully appreciate the advantage of railway travelling and actively criticise the management of the several lines. These criticisms are repeated and enforced by some District Officers who do not appear clearly to

recognise that a Railway is a commercial enterprise, and must be worked to ensure a profit on the capital involved. Better accommodation and more frequent trains imply greater expenditure, which would not always be remunerative. The complaint that "on occasions of gatherings or melas third class passengers are frequently conveyed in open trucks like cattle" is a striking instance of the unreasonable criticism to which Railway Companies are subjected in India. If the passengers do not like the trucks, they are not compelled to travel by them. If a Railway Company kept up an amount of rolling-stock equal to the maximum, not to the average, demand, a large part of that stock would be lying idle for most of the year and earning no return. The roads in Sarun were seriously damaged by the floods of August 1890, and the District Board have had to take a loan from Government for the repairs required. The floods in Durbhunga did similar damage. Several large works were under construction or in contemplation, such as the bridges on the Bukhtiarpur and Behar road (on which a steam tramway is proposed), the renewal of the old Poonpoon bridge, the Dhanarjee bridge on the Gya-Nowada road, the Lukhundya bridge at Sitamarhi, and in Durbhunga (a district which has always had large road cess funds) 138 new bridges and culverts were built at an outlay of Rs. 46,324, besides a number of new roads and the improvement of those in existence. There was a total outlay of Rs. 3,45,796 under district communications, and Rs. 84,302 on account of village roads. All the facts betoken a very proper activity in this department. Arboriculture has been specially regarded in Chumparun, where 26,960 trees were planted: most of these, however, were tar-trees which are more likely to give revenue than shade in time to come.

Education.

10. Education has made only a slight advance during the year. Of the small increase of 260 schools and 3,141 pupils, 243 schools and 2,177 pupils are under private management. Again, the census is said to have occupied the time of teachers as enumerators and inspecting officers as supervisors. The decadence of English schools from 64 to 55 is not necessarily to be regretted; for there are many who would not agree with the Commissioner that a partial and imperfect acquaintance with the English language is better than nothing. The improvement in female education recorded last year has not been maintained: the number of girls attending boys' schools should have been stated. The Mahomedans in the division showed themselves more interested in having their children taught at schools; and a beginning has been made with the aboriginal Thárus and the Maghya Dome boys. The Lieutenant-Governor trusts that in future this subject will receive fuller treatment in the annual report. The Commissioner has remarked that the ministerial officers are, as a rule, in efficiency and qualifications decidedly below the average of Lower Bengal, a result which he attributes in some measure to the limitation of appointments to Beharis, though he thinks the difficulty will gradually pass away as education advances. Sir Charles Elliott is desirous of having the work of the public offices improved very considerably: the increase of business demands better workmen or additional establishments. He will not add to the public expenditure when the better material is available, so that it remains for the Beharis to prove themselves fit for the preference which Government is prepared to show them for Behar appointments.

Local Self-Government

11. Mr. Stevens' general account of the District Boards shows that they continue to give little help to the executive, but are otherwise useful. He says:—

"The testimony of the District Officers regarding the working of these bodies continues to be favourable. In some cases the number of meetings held and the attendance of members have been scarcely sufficient: generally technical work and details have been left to the Chairman and the executive staff, while the Board have acted as a consultative and confirming body. In the districts in the interior of which Europeans reside much help is given by them in repairing local roads. Upon the whole the District Boards do quite as much work, and do it quite as well as I think could reasonably have been expected at the outset. I have always thought that the system would develop itself differently in different districts, and it is well that it should have sufficient elasticity to adapt itself to local conditions. The form which it has taken in this division, viz., that of a very strong executive combined with a consultative and sanctioning body, is that which seems most suitable, though the District Officer obtains in this way much less relief than in forward tracts in which there is a larger influential and educated population ready to undertake executive duties."

The contrast between a Local Board and a Municipality is crystallised in an epigram by the Sub-divisional Officer of Sewan. "The Local Board," he

writes, "delights in what may be called the demi-official mode of doing business, while the Municipality is nothing if not official." The Patna Municipality have under consideration a scheme for a regular system of drainage. This is a movement entirely in the right direction. But the Commissioners are said by the Magistrate to "divest themselves of most of their powers and duties, and delegate them to the Wards' Committees," who in their turn are afraid to enforce sanitary orders, under-assess the taxes, and then make large remissions. The Lieutenant-Governor agrees with the Commissioner that these Ward Committees ought to be an excellent machinery for carrying out local work, but with regard to the other complaints he trusts that a new order of things will soon be introduced. With regard to some of the minor municipalities, it is said that they spend too much on management and collecting establishment. The Commissioner should use his statutory powers to check such extravagance.

Conduct of zemindars.

12. The reports of the conduct of the zemindars are generally favourable, though they systematically neglect to grant receipts for rent. The Commissioner specially alludes to the astonishment with which, on returning to the locality after many years, he sees "the immense improvements which have been made through the good sense of the Maharaja of Doomraon and the ability and enlightenment of his Dewan, Babu Jai Prokash Lal." The Collector of Mozufferpore says that "among the most public spirited and liberal zemindars who hold lands in this district may be mentioned the Maharajas of Durbhunga, Bettiah and Hatwa, the Raja of Sheohar and the Nanpur Zemindar, Chaudhri Mahadeo Prasad." The Collector of Chumparun writes that "the Maharaja of Bettiah is a good landlord, and Mr. Gibbon, C.I.E., an admirable Manager." The Collector of Sarun says that "the Maharaja of Hatwa maintains his reputation as a careful and fair landlord." On the state of the important indigo industry Mr. Stevens remarks:—

"There have been no great questions connected with indigo-planting, but there have been a good many cases in which the planters or their assistants have been opposed riotously in cultivating newly-acquired lands; in one case a planter was dragged out of a police outpost by an angry mob. Still on the whole indigo-planting is said to be done more quietly and peaceably than elsewhere."

Miscellaneous.

13. Allusion is made by the Commissioner to a number of special subjects, such as the office accommodation at Patna, the want of houses at Durbhunga, and the inadequacy of the staff for the work of the districts, which should form the subject of separate references. In last year's Resolution a hope was held out that at the settlement of the next provincial contract it might be found possible to remedy to some extent the alleged dearth of officers. This matter continues to have the attention of Government.

14. The Lieutenant-Governor's acknowledgments are due to Mr. Stevens and Mr. Kemble for their administration of the division during 1890-91. The favourable notice recorded by the former of the services rendered by Mr. Forbes, Mr. Bourdillon, Mr. Marindin, Mr. Faulder, and Mr. Bernard is appreciated by Government. The Commissioner's observations on the merits of officers will be duly considered in the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

LIBERALITY OF RAJA RAJENDRO NARAIN ROY OF JAYDEBPUR.

GENERAL DEPARTMENT—EDUCATION.

Dated Darjeeling, the 25th September 1891.

RESOLUTION No. 253T—G.

READ—

Endorsement No. 5348, dated the 6th September 1891, and its enclosures, from the Director of Public Instruction, regarding the offer of Raja Rajendro Narain Roy of Jaydebpur to found a scholarship.

RAJA RAJENDRO NARAIN ROY of Jaydebpur, in the Dacca district, has offered to found a scholarship of Rs. 10 per month in memory of the late Pundit Issur Chunder Vidyasagar, on the following conditions :—

(1) That the scholarship be called the "Issur Chunder Vidyasagar Scholarship."

(2) That the scholarship be awarded to any boy who passes the Entrance examination from the Dacca Collegiate School, stands high in Sanskrit, and is considered otherwise a deserving youth by the Principal of the College.

(3) That the scholarship be tenable by the same boy in his career up to the Master of Arts class of the College, unless he forfeits it by failure in the University examination, or becomes entitled to any other scholarship under the rules of the institution.

Raja Rajendro Narain Roy has undertaken to pay the amount of Rs. 10 monthly through the Principal of the College for the first five years. After the expiration of that period he proposes to make over to Government a sum of Rs. 3,000 to be invested in Government securities, in order that the cost of the scholarship may be met from the interest on that sum.

The Lieutenant-Governor is pleased to accept the offer, and tenders his thanks to Raja Rajendro Narain Roy for his liberality. The Principal of the Dacca College should be the disburser of the money, as it is remitted to him by the Raja.

ORDER.—Ordered that a copy of the Resolution be forwarded to the Director of Public Instruction for information and for communicatian to Raja Rajendro Narain Roy.

Ordered also that a copy of this Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

EMPLOYMENT FOR STUDENTS OF THE SIBPUR ENGINEERING COLLEGE.

GENERAL DEPARTMENT—EDUCATION.

Darjeeling, the 25th September, 1891.

RESOLUTION No. 257T—G.

READ again—

The Resolution No. 294, dated the 21st April, 1891, recorded by this Government on the subject of the reorganization of the Sibpur Engineering College.

In paragraph 13 of the Resolution quoted in the preamble, it was stated—"The Lieutenant-Governor is also prepared to guarantee that four appointments in the upper subordinate grade of the Public Works Department shall annually be given to qualified students of the College who have graduated in Engineering at the Calcutta University, and successfully passed the subsequent period of practical training."

The intention of that paragraph was that the ordinary number of vacancies occurring annually in appointments of the above class should be filled from candidates educated at the Sibpur Engineering College, and it was calculated that on an average four vacancies occur every year: but it was not intended that Government should bind itself to a promise that so many as four vacancies will invariably take place every year for all future time. The Lieutenant-Governor accordingly directs that, for the above passage of the Resolution quoted, the following shall be substituted :—

"The Lieutenant-Governor is also prepared to direct that all appointments in the upper subordinate grade of the Public Works Department, made by the Government of Bengal, shall be made from students of the Sibpur Engineering College who have graduated in Engineering at the Calcutta University, and successfully passed the subsequent period of practical training."

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

RESOLUTION ON THE REPORT FROM THE BOARD OF REVENUE ON THE ROAD AND PUBLIC WORKS CESS OPERATIONS FOR THE CESS YEAR 1890-91.

FINANCIAL DEPARTMENT—ROAD AND PUBLIC WORKS CESS.

Darjeeling, the 25th September 1891.

RESOLUTION.

READ—

The Report of the Board of Revenue on the Road and Public Works Cess Operations for the year 1890-91.

The Road and Public Works Cesses were levied at full rates during the year in all the districts of Bengal where Act IX (B.C.) of 1880 is in force, except in Backergunge, where for special reasons, which now seem to have spent their force, the Road Cess has all along been levied at half of the maximum rate, the full amount being collected in the case of the Public Works Cess. The following statement shows the main results of the working of the Cess Act for the last two years:—

		1890-91.		1889-90.
Current demand	Rs.	78,38,927	Rs.	76,60,539
Arrear demand (*a*)	„	18,35,056	„	18,04,134
Gross demand	„	96,73,983	„	94,64,673
Advance collections	„	2,60,179	„	2,26,121
Net demand	„	94,13,804	„	92,38,552
Total collections	„	76,84,012	„	77,54,684
Remissions	„	12,661	„	76,885
Net balance (*a*)	„	19,33,855	„	16,58,728
Percentage of collections on current demand	„	98	„	101·2
Number of revenue-paying estates assessed		245,458		238,023
Number of revenue-free estates assessed ...		117,900		116,143
Number of tenures assessed		12,58,247		12,47,160
Number of recorded sharers in estates ...		15,86,944		14,92,308
Number of recorded sharers in tenures ...		22,51,746		22,36,454
Current demand of land revenue ...	Rs.	3,78,59,395		......
Present gross rental	„	14,60,45,236		......
Gross rental at first assessment ...	„	13,11,68,432		... ..

(*a*) Excluding advance collections made in the current year on account of future years.

2. The arrear demand given above exceeds by Rs. 1,76,328 the figure shown as the net balance of the preceding year, the difference being due, as is explained by the Board, to revaluations of rent-free holdings with retrospective effect, revisions of assessment and adjustment of accounts. The percentage of arrear collections on arrear demand was 68·8 compared with 76·8 in the previous year, that of current collections on current demand being 81·8 against 82·2. In explanation of the increase of nearly three lakhs from Rs. 16,58,728 to Rs. 19,33,855 in the balances of the past year, the Board observe that the 28th and 29th of March were holidays, that the fifteen days' grace allowed to assessees under section 45 of the Act leads to payments being deferred until after the close of the year, and that difficulty is experienced in realising arrears under section 70 from rent-free holdings which had previously escaped valuation. But the two latter causes must have been in operation all along, and no reasons are given for thinking that they acted more powerfully in 1890-91 than in 1889-90; while it is doubtful whether the occurrence of two holidays at the end of March can have had any material effect on the collections. The great majority of assessees pay their cesses through revenue agents and mukhtars who are always on the spot, and who would have no difficulty in paying on the 30th March if the treasury happened to be closed on the 28th and 29th. It is possible, as the Board suggest, that the realisation of cesses is not in all districts pushed on with sufficient energy, and that delay occurs in issuing certificates; but the Lieutenant-Governor is inclined to think that the difficulties referred to are due in great measure to the extreme complexity of the existing arrangements for collecting not only cesses, but land revenue, and that a more thorough reform may be effected by altering the kist days, classifying estates on a more intelligible system, simplifying the land revenue roll, and possibly to some extent amalgamating with it some of the registers kept up under the Cess Act. The final settlement of these questions will, however, involve the consideration of a large mass of detail, and allowance must be made

for variety of practice in different districts, and for differences in their revenue history.

3. In the twenty-one districts included in the following list the arrear collections fell short of 90 per cent.—

	Percentage of current collections on current demand.	Percentage of arrear collections on arrear demand.
Burdwan	83·6	17·8
Shahabad	88·8	37·2
Moorshedabad	89·1	45·4
Bankoora	79·5	55·4
Pooree	96·1	58·6
Furreedpore	57·5	62·1
Gya	64·2	65·4
Chumparun	73·4	73
Khulna	83·9	73·7
Mozufferpore	72·1	74·3
Durbhunga	86·4	76
Jessore	73·1	76·9
Cuttack	88·1	78·6
Bhagulpore	90·1	80·2
Patna	74·4	80·9
Sarun	65·2	81
Hooghly	70·7	81·2
Monghyr	74·2	85·8
Noakhally	90·2	86·3
24-Pergunnahs	86·2	87·6
Balasore	91·3	87·8

It is stated in the Board's report that owing to the large number of rent-free holdings the arrear collections in Burdwan have been bad for some years past, and that frequent changes of the District Officer have prevented any continuous effort being made to realise these balances. In 1889-90 a sum of Rs. 65,896 was remitted in this district as irrecoverable, and it is now stated that Rs. 84,792 due from petty rent-free holdings has become barred by limitation, because coercive measures were not taken in time. The excuse put forward in explanation of these shortcomings is clearly inadequate. The process of getting in arrears of cesses is a purely mechanical one, and if any one of the District Officers referred to had organised the routine arrangements on a reasonable system it might have been trusted to work of itself under the supervision of a Deputy Collector.

4. The arrears in Shahabad are explained to have been due to the evasion of petty shareholders and to difficulties arising in connexion with the revaluation. As, however, the demand of the district has been raised from Rs. 2,89,644 to Rs. 3,67,393, the Lieutenant-Governor agrees with the Board in thinking that the total collections are not unsatisfactory. In Moorshedabad floods are said to have stopped collections. Bankoora pleads the difficulty of realising cesses from ghatwals and rent-free tenures.

5. In the following districts the arrear collections exceeded 90 per cent., but the current collections fell below that standard :—

	Percentage of current collections on current demand.	Percentage of arrear collections on arrear demand.
Manbhoom	77·7	99
Hazaribagh	78·7	99·9
Rajshahye	79·4	95·7
Midnapore	82·3	94·8
Backergunge	82·4	96·4
Dacca	84·8	91·7
Purneah	85·1	97·3
Tipperah	86·8	93·1
Dinagepore	87·2	99·9
Pubna	87·5	94
Nuddea	88·1	98·4
Mymensingh	88·7	94·8
Maldah	89·3	99·9

In Manbhoom and Hazaribagh, where the number of estates is small, the default of two large proprietors accounts for the short collections, and in the

former district nearly the whole arrear was realized shortly after the close of the year.

Burdwan again heads the list of districts in which arrears have become barred by limitation, and contributes Rs. 1,06,518 to the total of Rs. 1,08,535 shown under this head. It should be observed, however, that Rs. 21,726, included in the sum set down against Burdwan, represents an over-assessment reduced on objection, and cannot properly be included in the statement. The other districts show only small amounts under this head.

6. The number of districts in which both current and arrear collections exceeded 90 per cent. declined from twelve in 1889-90 to eight in the past year:—

	Percentage of arrear collections on arrear demand.	Percentage of current collections on current demand.
Singhbhoom	100	100
Bogra	100	94·8
Lohardugga	100	92·6
Julpigoree	99·7	90·9
Beerbhoom	96·8	90·1
Rungpore	96·5	90·9
Chittagong	92·6	91·8

7. Darjeeling as usual had no arrears to collect, and realised 99·8 per cent. of its current demand. The results in these eight districts are satisfactory, and show that the business of collection was carefully watched by the district officers. It must be observed, however, that, with the exception of Darjeeling and Singbhoom, none of the districts which have collected over 90 per cent. of their cesses have any special advantage in this respect over other districts in Bengal. If heavy districts like Chittagong and Rungpore, both of which have a large number of estates on their registers, can collect so large a proportion of their cess demand, it is difficult to see why a similar standard should not be worked up to throughout the Province.

8. The following statement illustrates the working of the certificate procedure during the last two years:—

	1890-91.	1889-90.
Certificates pending from previous year (a) ...	33,087	35,260
Filed during the year	59,942	71,076
Total for disposal	93,029	1,06,336
Cancelled on objection	573	932
Struck off	1,550	1,740
Fully discharged	59,746	70,443
Pending at close of year	31,160	33,221
Sales effected	629	583
Sales set aside	98	54

(a) Revised figures.

As usual, the number of certificate cases instituted was smallest (577) in Chota Nagpore, where cess business is comparatively simple, and largest in the Burdwan, Patna and Presidency Divisions, which show 15,968, 12,376 and 10,948 cases respectively. Among districts Hooghly shows the largest number 89,388, Durbhunga and Jessore follow with 4,913 and 4,887, Midnapore shows 3,624, Chittagong 3,261, and Patna 3,113.

9. The information given by the Board on the important subject of valuation and revaluation of estates and tenures for cess purposes is not so full as might be desired. Only eleven districts are noticed, and among the number no mention is made of two—Purneah and Pubna—where the Lieutenant-Governor inspected during his recent tour the valuations which were actually going on. At Purneah he carefully examined the procedure and recorded a note recommending several alterations both in the procedure and the form of the register; these suggestions are still under the consideration of the Board. It appears to be the practice to notice in the report only those cases in which operations have been brought to a conclusion and a completion report submitted to the Board; but the valuations in progress are those which more especially need to be brought to the notice of Government. Cess valuation is tedious work, involving the issue of many notices and the supervision of countless details, and from its nature it is peculiarly liable to drag on indefinitely, particularly when, as is often the case, it is in charge of a special Deputy Collector who holds that position only so long as the work

lasts. To future reports a statement should be added, showing separately the revaluations undertaken for entire districts and carried on by a special officer, and the revaluations of certain estates only conducted by the ordinary district staff. In this statement should be entered the increase estimated to be attained when the revaluation was sanctioned, the progress made during the year, the amount of work remaining to be done at the close of the year, and the date when it is expected to be completed.

10. In statement VI annexed to the report, the Board furnish some interesting statistics comparing the gross rental for 1890-91 as deduced from the returns under the Cess Act with the gross rental ascertained on the same basis when the Road Cess was first introduced. According to these figures the rental of Bengal has risen within the last fifteen years from Rs. 13,11,68,432 to Rs. 14,60,45,236, being a net increase of Rs. 1,48,76,804 or 11·3 per cent—an increase which corresponds pretty closely with the growth of the population during these fifteen years. This steady and persistent growth of the valuation of land, even at a period when so much has been done to check enhancements of rent, throws some light on the soundness of speculations which have been made as to the causes of the increase of the gross rental of Bengal since the time when the Permanent Settlement fixed the Land Revenue at Rs. 2,85,87,722, calculating it at eight-tenths of the gross rental. Of the recent increase the Board say in paragraph 43 of the report that it is attributable "to increase of rents, to greater care in ascertaining rentals on revaluation by insisting more generally on the submission of returns by proprietors and tenure-holders of every degree instead of valuing summarily, and to the valuation of a vast number of rent-free tenures which had previously been overlooked through want of information. It is impossible to say how far each of these general causes has operated, but it is probable that the last two have together contributed more to raise the total valuation than enhancements of rents." It may be added that, owing to the dearth of real statistical information concerning the rental existing at the time of the Permanent Settlement, it seems doubtful whether any comparison can profitably be made between the position and resources of the agricultural classes in those times and at the present day. Only eight districts in the whole of Bengal show a decrease of gross rental. In most cases the decrease is known to be due to transfers of areas from these districts to others, but in future years a brief explanation should be entered in the margin of the statement against those districts which show a decrease. Of the many cases of increased valuation which the statement contains, some are due to transfers, but most to the general causes mentioned above.

11. The names of the Deputy Collectors whose work is commended by the Board will be noted in the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Offg. Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts Bengal, as reported to Government, during the week ending the 26th September, 1891.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.		*Western Districts.*		
BURDWAN DIVN.	1	Burdwan Sept. 26, '91 Culna ... Cutwa ... Raneegunge ...	0·39 0·67 0·98 0·71	Weather—cloudy and hot. Harvesting of *aus* nearly finished. Prospects of *aman* and sugarcane fair. More rain wanted. A few cases of cattle-pox. Supply of fodder and water sufficient. Prices of common rice :— Srs. Burdwan ... ... 16 Culna ... ... 14 Cutwa ... ... 16 Raneegunge ... ... 16 per rupee.
	2	Bankoora „ 26, '91	1·04	Weather—cloudy with occasional light showers and sunshine. Harvesting of *aus* continues. More rain wanted for *aman* crop. No deficiency of fodder or want of water reported. Condition of cattle generally good. Common rice selling at 18 seers per rupee at Sudder and 17½ seers at Bishenpur.
	3	Birbhum „ 26, '91 Rampore Haut ...	1·76 1·24	Much better rain this week, and it looks as if it would continue. Rice has greatly benefited by it, and high land crops, though certainly backward, are healthy enough. Low lands have very well-looking crops, and if rain continues there is certainty of a very fair outturn. The late rain came just in time. Condition of cattle normal. Fodder and water plentiful. Price of rice from 16 to 18 seers per rupee.
	4	Midnapur „ 26, '91	2·58	Weather—cloudy; too much moisture in the air. Transplantation of paddy crop finished. Sesame and sugarcane doing well. Cattle-pox in thanas Chanderkona, Sudder, Keshpur, Gurbetta, and Gopibalhabpore. Prices of common rice :— Srs. Sudder ... ... 16 Contai ... ... 17 Tumluk ... ... 16 Ghatal ... ... 16 per rupee.
	5	Hooghly „ 26, '91 Serampore ... Jehanabad ...	1·97 3·84 1·45	Weather—showery and cool. Prospects of crops generally good. Supply of fodder and water sufficient. Prices of common rice :— Srs. Sudder ... ... 13 Serampore ... ... 13 Jehanabad ... ... 16 per rupee.
	6	Howrah „ 26, '91 Uluberia ...	2·24 1·86	Weather—rainy. *Aus* and jute crops reaped; outturn fair. *Aman* doing well. Price of common rice 1[illegible] seers per rupee. Fodder and water-supply adequate. Health of cattle good.
		Central Districts.		
PRESIDENCY DIVN.	7	24-Perghs. Sept. 29, '91	1·83	Weather—seasonable. Harvesting of *aus* going on and steeping of jute commenced. *Aman* promising. Sugarcane doing well. Prospects good. Cattle-disease reported from thanas Baduria and Harowa. Supply of fodder and water sufficient. Prices stationary.
	8	Nuddea „ 26, '91 Kushtea ... Meherpur ... Chuadanga ... Ranaghat ...	1·42 1·20 0·28 0·58 0·83	Weather—cloudy with occasional showers. Rain has done good to *aman* plants, but more wanted. Sugarcane, turmeric, *til*, and *rahar* doing well. Condition of cattle good, and supply of fodder and water sufficient.
	9	Khoolna „ 26, '91 Bagirhat ... Satkhira ...	1·81 2·81 1·34	Weather—changeable with occasional heavy showers. Cutting of *aus* finished in Bagirhat, still going on in parts of Sudder subdivision. Prospects of *aman* fair. Transplantation finished in Bagirhat subdivision, still going on in Satkhira. Cattle-disease still prevalent in parts. Fodder and water sufficient.
	10	Jessore „ 26, '91 Jhenidah ... Magura ... Narail ... Bongong ...	0·85 1·25 0·54 0·67 1·35	Weather—cool and showery. Rainfall of the week very beneficial. Jute extracting going on. Prospects of *aman* fair, but more rain wanted in all the subdivisions.
	11	Murshedabad	...	Report not received.
RAJSHAHYE DIVN.	12	Dinagepur „ 26, '91 Thakurgaon ...	0·57 0·12	Weather—hot and cloudy. Prospects of winter rice not favourable. More rain wanted. Rice selling both at Sudder and Thakurgaon 13 seers per rupee. Condition of cattle good. Fodder and drinking water available.
	13	Rajshahye „ 26, '91 Nattore Nowgong ...	0·75 0·09 0·10	Weather—much cooler, some rain having fallen. *Aman* reported to be faring badly almost everywhere for insufficient rain. The river has fallen, and unless it rains heavily soon the outturn will be poor, especially in the Barind where the lands are high. Fodder and water-supply ample. No cattle-disease reported.
	14	Rungpur „ 26, '91 Gaibanda ... Kurigram ... Nilphamari ...	0·33 1·63 0·31 Nil	South wind with passing clouds. Rice lands very dry, but showers and heavy dews have done some good. Unless heavy rain falls shortly, the winter rice will be a very indifferent crop. Jute-steeping delayed for want of rain. Preparation of lands for winter crops going on. Fodder sufficient.

	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—concluded.				
		Central Districts—concld.		
RAJSHAHYE DIVN.—concld.	15	Bogra Sept. 26, '91 Sherpur ... Nowkhilla ...	0·26 0·30 0·45	Weather—hot during the day, but nights are pleasant. East and south-east winds. Transplantation of *aman* rice backward. A little over three-fourths of the area fitted for the crop has been cultivated, and it is rather late for transplanting the rest. Unless there be a good pour shortly, those already grown will suffer. Harvesting of *aus* nearly over; its outturn expected to be 16 annas. Land is being prepared for mustard and other cold-weather crops. Sugarcane doing well, but rain wanted for it also. Common rice selling at 15 seers per rupee. No want of fodder.
	16	Pubna „ 26, '91	0·94	Weather—cloudy with occasional rain. Jute still being cut. Prospect of *aman* still unfavourable for want of rain. Price of rice stationary. Fodder plentiful. No cattle-disease.
	17	Darjeeling „ 26, '91	0·54	Weather—fair. Transplantation of *haimanti* rice finished. Rain much wanted. No disease amongst cattle. Fodder and water-supply adequate.
	18	Julpigoree „ 26, '91	0·14	Weather—very hot; cloudy at intervals. Prospects of crops not good. *Haimanti* rice suffering for want of rain. Cattle-disease reported from Patgram. Supply of fodder and water plentiful. Price of rice rising.
		Eastern Districts.		
DACCA DIVN.	19	Dacca Sept. 26, '91	2·99	Weather—seasonable. Harvesting of *aus* completed and cutting of jute still continues. *Aman* on low lands progressing favourably, but on high lands partially injured for want of flood and sufficient rain. Recent rain has done much good to the crop. Supply of fodder and water sufficient. Condition of cattle good. Common rice sold at from 14 to 17 seers per rupee.
	20	Furreedpur „ 26, '91	2·19	Weather—seasonable. Prospect of standing crops good. More rain wanted for high land paddy. Condition of cattle good and fodder available. Rice selling at 16, 14, and 16½ seers per rupee, respectively, at Sudder, Goalundo, and Madaripore.
	21	Backergunge „ 26, '91 Bhola ... Patuakhali ...	4·54 2·21 6·01	Weather—seasonable. State and prospects of crops fair. Price of common rice varies from 13 to 18 seers per rupee. Supply of fodder and water sufficient.
	22	Mymensingh „ 26, '91	0·93	Weather—hot and cloudy. Prospects of standing crops not favourable. Condition of cattle good, and supply of fodder and water plentiful. Common rice sells at 14 seers per rupee.
CHITTAGONG DIVN.	23	Chittagong „ 29, '91	2·35	More rain wanted. Harvesting of *aus* and transplanting of *aman* still continue. Prices steady.
	24	Noakhally „ 26, '91	3·63	Weather—changeable with fairly good rain in Sudder, but little rain in Feni. Rain has done good to *aman* crop. More rain badly wanted, particularly in Feni. Price of rice higher. Cattle-disease reported from one outpost. Supply of fodder and water sufficient.
	25	Tipperah „ 26, '91	4·86	Weather—bright, warm, damp. Useful rain has fallen: more required. Prospects of crops improved. Jute trade lively. Prices of food-grains stationary. Fodder insufficient.
	26	Chittagong Hill Tracts. „ 17, '91	1·76	Harvesting of *jum* paddy continues. Cotton in flower. Transplanting in low lands nearly over. Common rice is being sold at 13 seers 5 chittacks per rupee.
BEHAR.				
PATNA DIVN.	27	Patna „ 26, '91 Barh ... Behar ... Dinapore ... Hilsa ...	0·40 Nil 0·34 0·44 0·04	Weather—cloudy. Harvesting of *bhadoi* in progress. Paddy somewhat improved by recent rain, but more rain needed. No time left for transplantation now. Prices generally stationary.
	28	Gya „ 26, '91 Jehanabad ... Nawada ... Aurungabad ...	0·02 0·01 0·80 0·83	Weather—hot and cloudy. Harvesting of *bhadoi* crops nearly finished. Paddy on dry lands dying for want of rain. Time for transplantation over. Rain urgently wanted. Prices of food-grains stationary. Supply of fodder and water for cattle sufficient.
	29	Shahabad „ 26, '91 Buxar ... Bhabuah ... Sasseram ...	1·23 0·46 2·50 1·70	Weather—hot at beginning of week; now cool. *Bhadoi* crops are being harvested. Rain has done good to the paddy crop all over the district, and will enable *rabi* crops to be sown in good time. More rain wanted, and *hathia* rains appear to have set in during the last twelve hours. Fodder sufficient. Prices stationary except at Nasrigunge, where they are reported to have risen.
	30	Durbhunga „ 26, '91 Madhubani ... Somastipur ...	1·0 0·35 0·58	Weather—cloudy with east winds. Rain has done some good to rice crop and has facilitated cultivation for *rabi*. Much more rain wanted. In south good rain has fallen, and rice crop much benefited in thanas Rosera and Singhia. Price of rice from 13 to 17 seers per rupee. Cattle in good condition. Water and fodder abundant.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR—*concld.*			
Patna Divn.—concld.			
31	Mozufferpur Sept. 26, '91 Hajipur ... Sitamarhi ...	0·11 0·71 0·06	Weather—alternately cloudy and sunny. Raining at the time of report. Practically there has been no rain during the week in Sudder and Sitamarhi. A few showers, however, have fallen in most parts of the district. Crops are beginning to suffer, but only slightly so far, and if rain comes within a week or ten days, they will be average. *Hathiya* has begun to-day (26th) with a smart shower, and the sky is overcast. *Sathi*, *makai*, and *marua* have given a good yield. Prices slightly rising. Cattle in good condition. Fodder and water plentiful.
32	Sarun „ 26, '91 Sewan ... Gopalgunge ...	1·02 0·29 Nil	Frequent showers. Weather cloudy. *Bhadoi* still being harvested. Prospects of rice considerably improved, but more rain still wanted. Ample fodder and water for cattle.
33	Chumparun „ 26, '91 Bettiah ...	0·36 Nil	Weather—cloudy sometimes and hot. *Bhadoi* crops are being reaped. Rain wanted for *aghani* rice. Fodder and water for cattle plentiful. Prices stationary.
Bhagulpore Divn.			
34	Monghyr „ 26, '91	0·65	Weather—very hot at times and practically rainless. *Bhadoi* harvest has turned out to be less than anticipated except in the Jamui subdivision. Rain is urgently wanted throughout the district, less in Kharakpur and Jamui than elsewhere. Damage to standing crops reported from Begu-serai. Four annas of the rice crop said to be damaged in four thanas and outposts owing to drought. Prospects of rice crop north of the river are very bad. Prices show a tendency to rise. Health of cattle good. Water and fodder sufficient.
35	Bhagulpur „ 26, '91	0·17	Weather—warm with occasional showers. Prospects of winter rice in the south are on the whole fair. More rain urgently wanted in the north.
36	Purneah „ 26, '91 Kishengunge ... Arrareah ...	0·06 0·65 1·29	Weather—cloudy but no rain at head-quarters. Rain in subdivisions has done good, and in Arrareah prospects are decidedly more favourable. *Rabi* lands are being prepared, and a little *aghani* was transplanted on the recent rain.
37	Maldah „ 26, '91 Chanchal ... Shibgunge ... Gajole ...	1·95 0·67 0·54 0·43	Weather—hot. Good rain on the evening of 25th. Transplantation of winter rice and sowing of *kalai* continue. Rain has done much good to standing crops. More rain still wanted for winter rice and *aman* paddy. Jute-steeping going on. Condition of cattle good. Fodder and water-supply sufficient. Common rice selling at from 12 to 18 seers per rupee.
38	Sonthal Perghs. „ 26, '91	1·41	Weather—seasonable. Partial heavy rain. Crops in good condition. *Bhadoi* harvest not yet complete; outturn satisfactory. A little more rain wanted in Deoghur for upland paddy. *Kurthi* and other crops doing well. Cattle reported well. Fodder and water-supply sufficient.
ORISSA.			
Orissa Divn.			
39	Cuttack „ 26, '91	5·60	Weather—cloudy with heavy showers occasionally. *Beali* crop harvest progressing; outturn estimated at 12 annas. *Sarad* crop in low lands submerged: more or less damage probable. Fodder-supply insufficient in low-lying tracts.
40	Pooree „ 24, '91 Pipli ... Gope ...	3·83 1·10 1·15	Weather—seasonable. Weeding of winter rice (*sarad*) going on. Early rice being harvested with an average outturn of about 10 annas. Miscellaneous crops doing well. Prices of common rice stationary. Cattle-disease reported from Gope thana.
41	Balasore „ 26, '91	6·99	Weather—very stormy. Rice on high lands doing well. Low tracts are extensively flooded, and it is too early yet to estimate the effects of the floods.
CHOTA NAGPORE			
South-West Frontier Agency.			
Chota Nagpore Divn.			
42	Hazaribagh Sept. 26, '91 Giridih „ ...	2·27 2·40	Good rain general. Prospects of *bhadoi* crops and winter rice very good.
43	Lohardugga „ 26, '91 Palamow (up to 21st)	2·52 3·06	Weather—rainy and cloudy. Plenty of rain both in Sudder and Palamow subdivisions. Harvesting of *gora* rice continues. *Sirgooja* is being sown. Prospect of winter rice favourable. Fodder and water plentiful.
44	Singbhoom Sept. 26, '91	3·70	The week has been a very wet one; but bright sunshine has now set in, which is much needed. Up to this, the crops are in excellent condition. Common rice sold during the past week at 16 seers per rupee both in the Kolhan and at Chyebassa bazar. No cattle-disease.
45	Manbhoom „ 26, '91 Govindpur ...	1·61 1·19	Weather—cloudy and rainy. Paddy crop promising. Fodder and water plentiful. Common rice selling at from 16 to 20 seers per rupee.

Published for general information.

CALCUTTA; REVENUE DEPT.,
The 29th September, 1891.

O. E. BUCKLAND,
Offg. Secy. to the Govt. of Bengal.

The following Statement shows the several Routes followed by the Trade in the Principal Staples of Traffic imported into Calcutta during the month of June, 1891.

IMPORTS INTO CALCUTTA.

The total fall from 1st January to 26th September 1891	46·18
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	57·92

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; [dew], dew.

J. H. Gilliland,

For Meteorological Reporter to the Govt. of India.

Meteorological Office, Govt. of India;

Calcutta, the 28th September 1891.

* Mean for 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the la[illegible]
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbe[illegible] are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during t[illegible] p[illegible] st stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 26th of September 1891.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Of week: Mean for district.	Of week: Normal mean.	District observations, Rainfall, Since 1st of month: Mean for district.	Since 1st of month: Normal mean.	Since 1st of month: Variation.	Since 16th May 1891: Mean for district.	Since 16th May 1891: Normal mean.	Since 16th May 1891: Variation.	Of week: Average number of rainy days.	Of week: Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—......indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 29th September* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING SATURDAY, THE 26TH OF SEPTEMBER 1891.

AT the close of the previous week pressure was falling rapidly at Moulmein and Rangoon, and winds at the Burma stations appeared to form part of a cyclonic circulation, the centre of which was to the east or south-east of Moulmein. It therefore appeared that a barometric depression was advancing in a westerly direction from Tenasserim or perhaps from Siam towards India. On the morning of the 20th, or the first day of the present week, the depression had advanced into the Gulf of Martaban, and its centre was to the south of Rangoon. It then advanced in a west-north-westerly direction or almost westerly direction, and at 8 P.M. on that day it was almost between Bassein and Diamond Island; but it was a feeble depression and gave only squally weather with very moderate winds. By 8 A.M. of the 21st instant the centre of the depression had passed out into the Bay of Bengal, though apparently it was not very far from land, but in its rear pressure was rising very rapidly at the Burma stations. The small storm during the 21st advanced across the Bay in a north-westerly direction, its rate of movement being at least 15 miles an hour, and on the morning of the 22nd pressure was falling very rapidly at False Point and less rapidly generally in the north-west angle of the Bay, showing that the depression was advancing towards Orissa, and the centre of the small storm was to the south-east of False Point, though still at a considerable distance from the land. The small storm still advanced quickly on the 22nd, and at about 5 P.M. crossed the coast close to False Point, where at 4 P.M. the low pressure of 29·436" was recorded. Notwithstanding the very rapid fall of pressure towards the centre, and the steep baric gradients which accompanied the storm, and that there was a very complete cyclonic circulation of winds, the wind velocities registered were never more than moderate in amount, though hard squalls were reported at False Point and general squally weather was reported from the coast stations. In the rear of the storm, however, rather strong winds were blowing, and for some days after its passage inland strong winds prevailed in the north and north-west of the Bay. On the morning of the 23rd the centre of the depression was well inland and was approaching in the direction of Raipore in the Central Provinces, and on the 24th the centre was between Seoni and Raipore. After passing inland close to False Point, therefore, the direction of the advance of the storm was no longer north-westerly as it had been across the Bay, but became almost due west, or perhaps it had reverted to the direction it had had when travelling through the Gulf of Martaban from Siam. On the 25th the storm centre was over Nagpur, on the 26th it was between Nagpur and Amraoti, and on the 27th the depression had become slighter and the centre had moved in a more northerly direction and was close to Seoni, while on the 28th it had again decreased in intensity and had advanced in a north-easterly direction and was near Jubbulpore. During the whole of the existence of the storm, winds circulated cyclonically round it, and the wind circulation had a very wide influence and was rather strong even at some distance from the centre. For the whole week, therefore, in Bengal, winds have been strongly easterly. At first they were almost winds of indraught towards the storm, but as it advanced further inland a moderate monsoon current began to spread over Bengal, and rainfall became general, though light, in all districts; and thus rain commenced to fall from the 21st and 22nd in the southern districts and from about the 23rd or 24th in the northern districts, and in most cases rain has fallen on from two to four days in the week.

As there was such a strongly pronounced easterly element in the wind direction towards the storm which advanced through the Central Provinces, the main force of the monsoon current has again been confined to the south-western districts of the province, and thus Orissa has again received a rainfall very considerably in excess of the normal, South-West Bengal and Chutia Nagpur falls slightly in excess, while in all other districts the falls have been in defect; the deficiency being very large in North Bengal and North Behar.

Pressure.—The variations of pressure during the week have been mainly influenced by the progress of the small storm previously described. On the 20th the pressure changes were unimportant, and pressure was falling at the eastern and northern stations, while it was rising elsewhere. On the 21st a general fall had set in, the fall being largest in the north-west angle of the Bay, while on the 22nd the fall became very rapid and at False Point it equalled 0·123", and pressure continued to fall till the storm centre passed inland on the evening of this day. On the 23rd pressure was still falling at some of the western stations, but in the rear of the storm the rise of pressure was very rapid, and this increase continued for the following two days, but by small amounts, except at the northern stations where on the 26th pressure had begun to fall. The variations of pressure during the week have therefore been large, but the mean pressure has generally been above the normal only by moderate amounts, the usual excess equalling from about 0·03" to 0·05". This excess, as may be expected, has been generally largest at the northern stations and smallest in Orissa, through which the storm passed, where it has been only 0·018". In Assam, also, the excess has been small and has only equalled 0·018."

Temperature.—The mean temperature for the week has been below the normal in Orissa, South-West Bengal, and Chutia Nagpur, the divisions where the rainfall has been in excess; but in all other divisions the mean temperature has been from about 1° to 2° in excess. The

largest defect has been 1·7° in Orissa, and the largest excess 2° in North Behar. For the whole province the mean temperature has been only 0·3° above the normal. In Assam temperature has also been in excess, the amount being no less than 2·5°.

Rainfall.—In Orissa the very heavy average fall of 5·70 inches has been reported during the week, or nearly 4 inches in excess of the normal; Chutia Nagpur has received 2·10 inches, or nearly half an inch in excess; and South-West Bengal almost two inches, or a fall very slightly in excess of the normal. In East Bengal an average fall of nearly two-and-a-half inches is recorded, which is slightly below the normal amount. In the other districts the falls have been very much smaller than these. South Behar has received only 0·70 inch, or considerably less than half the normal fall. In North Behar the same amount of 0·70 inch has been received; but this only represents about a fourth of the usual fall. Finally, North Bengal has received the smallest falls of any division, and only averages 0·44 inch, which is only equal to one-seventh of the normal fall for the period.

From the 1st of September up to the 26th the falls in North Behar have only averaged 3·14 inches, or about a third of the normal fall; in North Bengal the falls have equalled 3·84 inches, or decidedly less than a third of the usual amount; and in South Behar the falls have averaged 4·34 inches, or rather more than half the normal fall. In East Bengal for this period the falls have equalled about half the normal, in South-West Bengal nearly two-thirds the normal, and in Chutia Nagpur the fall has been just equal to the normal. In Orissa, on the other hand, no less than sixteen inches of rain have fallen, or nearly seven inches of rain in excess of the normal.

During the past week the following districts have again been extremely deficient in rain:—Bogra, Rajshahye, Dinagepore, Rungpore, Julpigoree, Mozufferpore, Chumparun, and Bhagulpore.

In Assam during the week, Sibsagar has received 1·75 inches, Silchar 0·76 inch, and Dhubri only 0·03 inch of rain.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 26th of September 1891:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1891.

	Inches
The mean 10 A.M. pressure of the seven days	29·806
	°
The mean temperature of the seven days	81·7
The extreme variation of temperature	14·4
The maximum temperature	90 0
	%
The mean 10 A.M. relative humidity of the seven days	88
	Inches.
The total fall of rain from 20th to 26th September 1891	1·92

The daily mean temperatures are the crude means of maximum and minimum temperatures.

J. H. GILLILAND,
For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA,
The 28th September 1891.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending with Saturday, the 12th September 1891.

CONTENTS.

PAYMENT OF REWARDS FOR THE DESTRUCTION OF TIGERS IN THE SUNDERBUNS RESERVED OR PROTECTED FORESTS.

RESOLUTION.

JUDICIAL.

Dated Darjeeling, the 25th September 1891.

READ again—

A notification dated the 19th December 1884, issued by this Government in the Judicial Department, regarding the payment by the Forest Department of rewards for the destruction of tigers and tiger-cubs in the Sunderbuns.

Read also—

Letter No. 25M.G., dated the 30th April 1891, from the Conservator of Forests Bengal.

Letters Nos. 2Ct.—J.G. and 26Ct.—J.G., dated respectively the 13th July and the 13th August, 1891, from the Commissioner of the Presidency Division.

Under the existing arrangements, the Forest Department pays a reward of Rs. 25 for each full-grown tiger and of Rs. 10 for each tiger-cub killed in the Sunderbuns reserved or protected forests, in addition to the authorized

rewards paid by the Civil Department. The Conservator of Forests, Bengal, having pointed out certain defects and difficulties in the working of this system, the Lieutenant-Governor directs, in supersession of all previous orders on the subject, that from the 1st October 1891 either the Forest Department or the Civil Department shall pay a reward of Rs. 50 for each full-grown tiger or tigress, and of Rs. 20 for each tiger-cub proved to have been killed in the Sunderbuns reserved or protected forests, and in respect to which there is no reason to believe that a reward has already been given by the State on a previous occasion. The skin and skull of each tiger, tigress or tiger-cub killed should be taken either to a Ranger or Forester in the Sunderbuns, by whom they should be retained until the arrival of a gazetted officer of the Sunderbuns Forest Department, and produced before him for inspection, or to the District Magistrate, or, during the absence of the latter from head-quarters, to the officer in charge of the district office, for inspection. The authorized rewards should be paid after the inspecting officer is thoroughly satisfied that the skin is intact and attached naturally to the skull, and that the animal was killed in the Sunderbuns protected or reserved forests. He should also personally see that the skull is destroyed so that it cannot possibly be used again.

2. As the amount of reward is chargeable in moieties to the Civil and Forest Departments, the expenditure incurred on this account should be adjusted at the close of the financial year by those Departments after mutual communication.

ORDER.—Ordered that a copy of the above Resolution be forwarded to the Conservator of Forests, the Commissioners of the Presidency and Dacca Divisions, and to the Accountant-General, Bengal.

Ordered also that the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

JOHN EDGAR,

Chief Secy. to the Govt. of Bengal.

REPORT ON THE ECONOMIC AND ART SECTION OF THE INDIAN MUSEUM FOR THE YEAR 1890-91.

REVENUE DEPARTMENT—MISCELLANEOUS.

Darjeeling, the 28th September 1891.

RESOLUTION No. 317 MIS. (F.)

READ—

The Report of the Trustees of the Indian Museum on the Economic and Art Section of the Indian Museum for the year 1890-91.

The Report of the Assistant Curator of the Economic and Art Section of the Indian Museum on the Economic and Art Museum, with the remarks of the Trustees, was received on the 1st September 1891.

The record of the year's work is divided under three heads, namely, 1st, the preservation and arrangement of existing specimens; 2nd, the collection of new specimens for the Economic and Art Section; and 3rd, the collection of specimens for other institutions. The first is at the present moment the most important function of the Section; the collection of new specimens is retarded by financial considerations, but the collection of specimens for other institutions furnished sufficient employment during the year of report as in previous years. The want of proper accommodation has had an injurious effect on the preservation of the existing specimens, and the Lieutenant-Governor regrets to find that fourteen specimens of rugs and carpets "have been utterly destroyed, rendering them unfit for show." The completion of the Sudder Street extension to the new buildings has now removed the want of house accommodation, and it is hoped that the early removal of the specimens in the Economic and Art Section to the new quarters will secure their better preservation, and also admit of their being arranged and catalogued on a more permanent and satisfactory basis.

2. Upwards of sixteen hundred new specimens were added to the Section, viz., twenty-seven consisting chiefly of New Guinea curios, presented by Mr. Simon Koch, to the Ethnological Branch; 1,263, of which 925 were the duplicates of the collection made at the instance of the Government of India for the Imperial Institute, London, to the Economic Branch; and 316 to the Artware Branch comprising (1) a collection of art manufactures, consisting of water-colour pictures representing phases of native life, papier maché heads representing turbans and forehead marks of different sects and races, two beautiful specimens of wood-carving, sixteen of Jaipore brassware, and one hundred marble figures of gods and goddesses, received from the Jaipore Durbar in exchange for Bengal articles supplied by the Indian Museum; (2) twenty-five heads distinguishing turbans received from Poona; and (3) seventeen good specimens of wood-carving received from Burma, representing different occupations of men and women. The total number of exhibits in the Ethnological Court was 7,171 against 7,145 in the preceding year; 18,217 in the Economic Branch against 16,954 in 1889-90; and in the Artware Court, after allowing for breakages and other losses, 10,842 against 10,526 in the year before.

3. Besides the 925 economic specimens, with duplicates for Bengal and other provinces in India, collected for the Imperial Institute, London, thirty-three articles of ethnological interest were supplied for the Berlin Museum to the German Consul at Calcutta, and two more consignments, consisting of 78 specimens of Indian fibres required by the Kew Museum and the Chamber of Commerce, Manchester and Dundee, were despatched.

Mr. C. E. Buckland filled up the place of Mr. P. Nolan in the Board on the latter's departure on leave for England on the 24th March 1891. Another member nominated by the Lieutenant-Governor, Mr. A. Simson, left for England on the 14th March 1891, Mr. J D. Maxwell being appointed in his place on the 17th April 1891

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secy. to the Govt. of Bengal.

RESOLUTION ON THE ANNUAL REPORT OF THE DIRECTOR OF LAND RECORDS AND AGRICULTURE, BENGAL, FOR THE YEAR 1890-91.

REVENUE DEPARTMENT—LAND REVENUE.

Darjeeling, the 28th September 1891.

RESOLUTION No. 1118 L. R.

Read—

The Annual Report of the Director of Land Records and Agriculture, Bengal, for the year 1890-91.

The Director's report is divided into two main parts, of which the first deals with the surveys and settlements in progress during the year; the second relates to agricultural enquiries and improvements and cognate subjects.

I.—SURVEYS AND SETTLEMENTS AND MAINTENANCE OF VILLAGE RECORDS.

2. The main portion of the report contains a brief account of the progress of the work in a large proportion of the total number of estates under settlement, and is illustrated by three Appendices (A, B, and D), which show in tabular form the estates, whether Government, temporarily-settled, wards' or private estates, which are under survey and settlement during the year, the areas surveyed, the cost of survey and of settlement, the progress of survey and of recording and settling tenants' rents, the effect of the settlement on the rentals, and the names of the settlement officers under whose immediate control the settlements were conducted.

It is observed that the order of the different estates, as given in the Appendices and in the body of the report, is not uniform, and that they are not, moreover, arranged according to any strict geographical plan. In future an intelligent geographical order should be adopted both as regards the civil divisions and the districts and estates in those divisions, and the same order should be adhered to in the report itself and in each of the Appendices attached to it. Some definite principle should be laid down as to what settlements should be treated of in this report, and what should be omitted. In all riparian districts along the Ganges and Brahmaputra in Eastern Bengal, there are a great number of *chars* and islands, sometimes belonging to Government and sometimes to private owners, which are subject to diluviation and in which settlements are constantly going on. Some of these settlements in Dacca, Backergunge and Noakhali have been selected for inclusion in the Appendices or for mention in the report, and the majority are not included; but it is not clear on what principle this selection has been made. Again, it is also observed that in some instances estates entered in the Appendices have not been noticed in the report, but the grounds for this omission are not apparent. If it is not considered advisable to refer in the report to every settlement, the natural course, and that which should be adopted, would be to notice the larger and more important operations; but this does not appear to have been done in the present instance, where such small settlements as those of the Khosalpur estate in the Nuddea district, and of certain *chars* and small private estates in the Noakhali and Tipperah districts, have been selected for particular mention. The statements given in Appendices A and B should also be totalled for convenience.

3. With regard generally to the accounts of the different survey and settlement proceedings given in Chapter I of the Report, the Lieutenant-Governor would observe that it is not necessary that the report should deal with past history, as has been done in the present report in the cases of Angul (paragraph 5), Jalpaiguri (paragraph 17), Chittagong (paragraph 21), the Srinagar-Baneli Ward's Estates (paragraphs 42-44), the Dakhin Shabazpur Ward's Estate (paragraph 61), and other instances. What is required in the Director's report is a clear and sufficiently full account of what has been done and what has been spent during the year under report both on survey and on settlement; the name of the officer who was in charge of the settlement, as well as of his assistants, and their share in the work and the number of days spent by each away from head-quarters should be mentioned; and when the account of the work done consists in reporting the number of villages in which *khanapuri* was completed, or the number of ryots whose status was decided or whose rent determined, the figures should be referred to a common standard of progress, so as to enable Government to judge whether the settlement is in a satisfactory state of progress or not. An early opportunity will be found for carrying out these instructions. Orders have lately been issued in Government order No. 135T—R., dated the 18th June 1891, to the Board of Revenue, under which, in addition to the report, which is to be mainly financial and statistical, for the financial year ending the 31st March, and to be accompanied by the present agricultural part of the report, the Director will submit annually a further administrative report containing full information with regard to all surveys and settlements for the survey year ending the 30th September. Advantage should be taken of these orders to correct the shortcomings pointed out by this Resolution on the report now submitted. In a subsequent letter to the Board of Revenue, No. 455T—R., dated the 24th September 1891, detailed instructions have been given as to the nature of the information which is to be supplied by the Settlement Officers in their half-yearly Progress Reports, and which will be embodied in the Director's two reports.

4. The work of settlement is being carried out on a large scale in three tracts which are under the supervision of the Director—Orissa, Chittagong, and the Jalpaiguri Duars—as well as in a portion of the Sonthal Pergunnahs which is not under Mr. Finucane or the Board of Revenue. The history of the progress of these important settlements should be set in the forefront of the report.

5. *General survey and resettlement of Orissa.*—The progress made by Mr. Patterson's survey party has been rather disappointing. The expenditure

on survey is given in the report and in Appendix A up to the end of June 1891; it should have been given to the end of the year under report, *i.e.* to the 31st March 1891. There are, moreover, discrepancies between the report and the Appendix A, as to the figures of the area surveyed up to and during the year. The report speaks of 360 square miles cadastrally surveyed in the Puri district in 1889-90, and 643 during 1890-91, or 1,003 in all; whereas Appendix A shows 549,003 acres, or 858 square miles, surveyed during 1890-91, and none in the previous year. The discrepancy is probably due to the confusion between the survey and the financial year. The Deputy Superintendent of Survey estimates that the cadastral survey of these 1,003 square miles, which was completed by the end of June 1891, has cost Rs 139 per square mile, but apparently this estimate omits the cost of the traverse. The total expenditure on the 1,003 square miles is stated as Rs. 1,67,996, or about Rs. 165 per square mile.

The Settlement Officer, Mr. H. Reily, joined his appointment in February 1891, and the Assistant Settlement Officers at various later dates. During the remainder of the year their time was occupied in demarcating in advance for the survey party, testing the khanapuri, attesting areas of holdings, recording rights and existing rents, and making arrangements for utilising the kanungos, patwaris, and chaukidars of the country. The report states that the holdings of 11,734 tenants were attested and their rents recorded by the end of the year, and this seems a considerable amount of work, since settlement operations began so late in the year.

There is a further discrepancy between the report and the Appendix D, as to the number of Assistant Settlement Officers, the former showing 7 and the latter 8.

6. In Chittagong, survey and settlement have been going on in two parts—Old Thana Ramu and the Sudder sub-division. In the former, where work was begun in 1888, the survey of the whole area of 156,390 acres was completed, as well as the attestation of all the holdings in the 50 villages under the direct management of Government. The draft records of 40 villages were published, and of 12 villages finally published, but the final publication of the records of the remaining villages could not be made pending orders of Government as to the status to be assigned to the Noabad talukdars. Government has since issued orders on this point, under which they will be treated as tenure-holders. This part of the settlement was under Baboo Jogendro Kumar Bose, Assistant Settlement Officer, whose progress seems to have been satisfactory. The survey, which was finished before the year under report, cost annas 6-11 per acre and the settlement has cost annas 1-3 so far as it has gone.

7. The main strength of the staff was thrown into the Sudder sub-division, under Mr. Slack as Settlement Officer with a Covenanted Assistant, Mr. Allen, and three uncovenanted officers under him. The Professional Survey Department completed 1,448 square miles of traverse and 863 square miles of cadastral survey, out of a total area of 1,630 square miles, in the two years 1889-91. During the year 1889-90 the average cost of survey per acre was as high as 7 annas 9 pies, the reasons assigned being the small size of the plots, the high rate of wages, and the extreme complexity of tenures. With a view to reducing the cost of survey, the khasra writing was during the year under report made over to the Settlement Department, the result being that 308,480 acres were surveyed at a cost of Rs. 1,21,195, or an average of 5 annas and 4 pies per acre.

8. The settlement staff were mainly engaged in completing the survey records of 195 villages, and in demarcation and settlement of boundary disputes; but the rents and status of over 7,000 ryots were recorded during the year. Fuller information as to the work done by each officer individually will be looked for in the Administration Report. The total cost of survey and settlement up to the end of the year was Rs. 1,99,768, and the settlement has been estimated to result in an increase of revenue of Rs. 1,20,000.

9. *Jalpaiguri, Western Duars.*—The account of the year's work is again far too brief. The Lieutenant-Governor personally inspected the operations in April last, and it then appeared that the figures as to the survey given in paragraph 17 of the Director's report for the year 1889-90 were not quite correct. The report stated that in the season of 1889-90, 782 square miles had been traversed, and the 4-inch topographical survey of 118 square miles and cadastral

survey of 304 square miles had been completed. The figures as given by Colonel Strahan, the Deputy Surveyor-General, showed, however, that during that season traverse had been completed of 730 square miles, cadastral survey of 275, and that no 4-inch topographical work had been done. The estimate of work turned out during 1890-91, as far as then known, was as follows:—

Cultivated ...	... Traverse 92,	cadastral 188.
Cultivable ...	... Ditto 195,	topographical 383.
Forest ...	... Ditto 109,	detail 150

This left about 170 square miles to be surveyed topographically and 300 of forest detail to be completed.

The cadastral work showed the following results for 1890-91:—

Pergunnah South Mainaguri—all the maps, amounting to about 1,200 in number, were finished and sent in.

Pergunnah North Mainaguri—out of 934 maps, 697 were finished and sent in.

Pergunnah Chengmari—out of 1,143 maps, 1,112 were finished and sent in.

All of these were expected to be in by the middle of April.

In Moraghat very few, and in West Madari no maps were sent in.

Many errors and defects were found in these maps and the accompanying records, and the Settlement Officer was much delayed in his proper work by the delay in completing them, and by the necessity of correcting them when sent in. He submitted a report on proposed settlement rates, on which orders were passed by Government, and he prepared during the year the assessment, in accordance with those orders, on the larger part of the jotes in the South Mainaguri pergunnah.

10. The next class into which the operations of the Department may naturally be divided is the settlement of certain large scattered Government estates in different parts of the country. The only representatives of this class are Angul and Banki in Orissa, and as to the work done in these during the year, the report gives very little information. It appears from Appendix A that Rs. 13,928 were spent during the year partly on survey and partly on settlement in Angul, but there is nothing to show exactly what work was carried on, nor does the report show who was in charge of it. Appendix D should have shown this, if the report itself did not mention it; but it is observed that no settlement officer's name is entered for Angul in that Appendix.

As to Banki, where Rs. 5,003 were spent mostly in settlements during the year, the only details of work mentioned by the Director are as follows:—"The entries in the khatians and the new rentals were explained to the raiyats during the year and their signatures taken." There is nothing either in the report or in Appendix D to show under whom the work was carried on. The survey and settlement of the estate, which comprises 76,800 acres, were completed during the year at an average cost of 7 annas 10 pies per acre, the only important work remaining to be done being the reorganization of the surbarakari establishment. In their letter No 644A, dated the 27th August 1891, the Board of Revenue have stated that the final report is still being awaited nor has that report been yet received by Government. The Lieutenant-Governor regards this delay as very unsatisfactory.

11. Next come the small scattered Government estates, mostly *chars* or islands in the great rivers, which were never settled with any one, or which have fallen into the hands of the Government through default of their proprietors by reason of diluviation. As already mentioned, many of these exist in all the riverain districts, and it is not known why certain of these have been selected for description here. The largest collection of these appears to be the *Backergunge Government Estates.* The report with its Appendices exhibits great confusion as to the actual number of estates under settlement in this district. Excluding the Dakhin Shabazpur Estate, which is under the Court of Wards, Appendix A shows 31 estates under survey and settlement, there being nothing in the Appendix to show which of these are under Babu Piari Mohan Bose and which under Mr. Dwija Das Dutta. The body of the report mentions 39 estates as under the former Babu, viz. 4 under the Tenancy Act and 35 under the regulations, and 17 under the Tenancy Act as in charge of Mr. Dwija Das Dutta. Neither the figures in the Appendix A, nor those in the report, agree with those which were supplied

to Sir Charles Elliott at his inspection of the Burisal office, on which occasion there were said to be 25 settlements pending under the Tenancy Act and 23 under the old regulations. Of these 48, 2 were represented as being under the Sub-divisional Officer of Bhola, 4 under the Sub-divisional Officer of Patuakhali, 9 under Sub-Deputy Collector Babu Akhil Chunder Roy, and 6 under Sub-Deputy Collector Babu Kali Prosad Chatterjee. None of these latter are, however, mentioned in the Director's report.

The Director should in his next report explain to Government the exact number of surveys and settlements pending in the Backergunge district, stating their names and the officer under whom each is placed.

12. *Government Estates in Midnapore.*—The report does not state, in the case of either of the two estates under settlement, what work was done during the year. In the case of the Bhetia estate it appears from Appendix A that Rs. 192 were spent, but it does not appear on what the expenditure was incurred; in Kamina Chak nothing was spent, and it is stated that settlement operations have been completed. It should have been reported whether anything, and if so what, was done.

13. *Government Estates in Nuddea.*—Out of 17 estates under survey and settlement during the year in the Nuddea district, only one, that of Khosalpur, is mentioned in the Director's report, and the information given as to that estate is altogether incorrect. The Director writes:—"This estate, containing 476 acres, was purchased by Government at a sale for arrears of revenue. The measurement was completed during the year at a cost of Rs. 137, or 4 annas and 7 pies per acre on the area surveyed." It appears, however, from the progress report for March 1891, submitted by the Collector of Nuddea, that the estate contains 13 villages, and therefore presumably more than 476 acres, and that up to the end of the year 1890-91 only 4 out of those 13 villages had been demarcated, and 1,440 bighas or 476 acres (this is apparently what was in the Director's mind), were cadastrally surveyed, the survey operations up to the end of the year having cost altogether Rs 64-5-5. The progress of this survey, which is under Babu Hem Chunder Mitter, has been very unsatisfactory.

14 *Government Estates in Noakhali.*—Mention is made of three *chars* only in this district, namely, Pir Baksh, Char Ghazi and Char Fakira. No account is given to show what settlement work was carried out in estate Pir Baksh during the year, beyond a statement that an increase of Rs. 184 was obtained in the rental.

15. *Government Estates in Tipperah.*—The settlement of Government estate Jowar Baluakhandi, comprising an area of only 2,762 acres, took two years to complete under Babu Rajani Kumar Dutta, Deputy Collector. The progress appears to the Lieutenant-Governor to have been unduly slow. In pergunnah Singargaon Rs. 705 were spent during the year, the only work done being the decision of certain disputes about boundaries, and objections as to soil classification. No satisfactory explanation is given of the delay in the decision of these disputes, which had the effect of raising the average cost of survey and settlement to the abnormally high figure of 13 annas and 9 pies per acre.

16. The fourth important class of estates under the Settlement Department are those belonging to the Government Wards. One of the largest of these is the *Srinagar-Baneli Ward's Estate.* The report explains the method adopted of settling fair rents on the basis of existing rates, an allowance in the area being made for difference in the method of measurement and for more accurate survey; but no account is given to show in what actual work the Settlement Officer, Mr. Collin, was engaged during the year.

It appears that the settlement of 30 villages with an area of about 15 square miles was left pending at the close of the year owing to a dispute as to the standard of measurement, but it is understood that the matter has since been settled, and the submission of the final report, which has already been sent in to the Director, is now awaited by Government.

17. *Burdwan Raj Khas Mehals.*—In Sujamutha Rs. 10,252 were spent during the year on settlement, but here again very little information is given by the Director as to the work that was carried on. The Lieutenant-Governor inspected the settlement personally in the month of February last, and His

Honour in a note recorded at the time expressed his dissatisfaction with the amount of work that had been done, and with the want of energy of the Settlement Officer, Mr. Dwijendra Lall Roy, who appeared to be under the mistaken impression that a Settlement Officer's camping season lasted only up to the month of March.

The sum of Rs. 8,133 was spent during the year on the settlement of the *Hukumápur Estate* under Babu Sukumar Haldar; but Appendix A shows nothing entered either against this estate or against Sujamutha as expenditure on survey from the commencement of the operations. An explanation of this should be submitted.

18. *Kanika Ward's Estate.*—Here also the Lieutenant-Governor notices a want of information as to what was done during the year. The report states that the survey was completed during the last year, by which is presumably meant the year 1889-90; whereas in Appendix A, 166,400 acres are entered as surveyed during 1890-91 at a cost of Rs. 33,165. The Lieutenant-Governor met the Settlement Officer, Mr. Srinath Dutt, during his visit to Orissa, and was obliged to find some fault with him for having conducted the work of attestation and settlement of rents at too long a distance from the villages concerned.

19. *Kujong Ward's Estate.*—The same discrepancy as to survey occurs in this case as in that of Kanika referred to above. The report states that the survey was completed last year, but the Appendix A shows Rs. 3,028 as expended on survey during 1890-91, although no area is entered as surveyed during that year. Explanation of these discrepancies should be given. The total number of ryots in the estate is 36,085, and of these the rents of 14,512 were settled during the year; but it is not known, either from the report or Appendices, how many settlements were made up to 31st March 1890, nor, therefore, how much work remains to be done. From the fact that Rs. 6,007 were spent on settlement up to the 31st March 1890, it would appear that the rents of some raiyats had been settled previous to the year under report.

20. *Dinagepur Ward's Estates.*—These comprise the estates of the Wards of Sunkerpur, Churaman and Maldwar. Final reports have been received by Government in the case of all these estates, and Government Resolutions have already issued on the two latter. The report on the Sunkerpur estate is now under the consideration of Government.

21. *Dakhin Shabazpur Ward's Estate.*—Paragraph 61 of the report, which explains the reasons why settlement was determined on after the estate came under the Court of Wards in 1886, is not required.

The only account of the year's proceedings is contained in two lines of the report, which state that during the past cold weather the Settlement Officer, Babu Piari Mohan Bose, was engaged in completing the khanapuri which was left undone by the Survey Department. The Lieutenant-Governor does not consider this a satisfactory history of a year's work, there being nothing to show either how much work was done or what remains to be done.

22. *Serail Pergunnah Ward's Estate.*—The survey of the estate was completed during the year, and good progress was made in the settlement work by Babu Kali Sunker Sen, Settlement Officer, who settled fair rents for 1,410 tenants between December 1890 and the close of the financial year. The total area surveyed was 180,664 acres, at a cost of Rs. 1,21,298, giving a rate of over 10 annas and 8 pies per acre, not of 8 annas per acre as entered in column 16 of Appendix A. In arriving at the average for survey as 8 annas, the Director has apparently only taken into account the cost incurred in 1890-91, and not the previous cost, which amounted to Rs. 30,969. No explanation is given of this exceedingly high rate.

In the Serail pergunnah the lands of the villages are divided into what are locally known as "bandha" according to their bearing (north, west, south or east) from the villages, each "bandha" having a single prevailing rate. With regard to the Director's remark that this is one of the very few cases met with in settlement operations in Bengal, where a true prevailing rate exists, the Lieutenant-Governor believes that such a rate exists more often than is supposed, if the term "prevailing rate" is used in its true sense as a theoretical rate, which actual rates often agree with and always tend to approach. If a rate cannot be called a prevailing rate because a few exceptions are found, or if

great accuracy is insisted on, then no doubt the Director's remark is true; but the Lieutenant-Governor does not use the term in that sense. In the Settlement Reports which have been submitted recently, he finds frequent reference to the theoretical existence of prevailing rates; and it is hardly conceivable that there should not have been one, although it may have been effaced or disguised by subsequent changes of area without change f rent.

23. The last class of estates which have come under settlement operations consists of those which belong to private proprietors and in which a record of rights is prepared under section 177 of the Tenancy Act, because of serious disputes between land-owners and the tenants. Mention is made in the report of such estates in four districts The account of the year's work in the Dubalhati, Mollarpur, and Alakdia-Durgapur estates is meagre. There is nothing to show on what the expenditure of Rs. 17,381, shewn under settlement against the first of these estates, was incurred, nor what was done in Mollarpur besides the survey. In Alakdia-Durgapur no expenditure on settlement is shown up to the close of the year. The submission of the final report of the operations in the Dubalhati estate should be expedited.

24. *Maintenance of Records.*—The Director has only mentioned this important subject in the case of three settlements—those of the Angul and Banki estates in the Orissa Division, and of the Srinagar-Baneli Ward's estates. In the two former estates it is said that the sarbarakars will maintain and correct the records in accordance with rules which have been recently approved by the Board of Revenue.

In the Srinagar-Baneli Ward's estates the records will be kept up by the patwaris, 104 in number, of whom 48 have already obtained certificates of proficiency in surveying, while the rest are said to have received some training. This is so far satisfactory, but future reports should state what steps, if any, have been taken with a view to the maintenance of the village records in other estates in which settlement proceedings have been completed during the year or have approached completion.

PART II.—AGRICULTURAL ENQUIRIES, EXPERIMENTS, AND IMPROVEMENTS.

25. *Analysis of Districts.*—The Government Resolution, dated the 23rd September 1890, on the Director's report for the year 1889-90, noticed the completion by Mr. Bhupal Chundra Basu and Mr. Nogendra Nath Banerjee, the Director's Assistants, of the analysis of the two districts of Dacca and Lohardugga. During the year now reported on, Mr. Basu has been engaged on a similar analysis of the Nuddea district, while Mr. Banerjee has been making a tour of the district of Cuttack, on the agriculture of which he is now engaged in writing a report. The experimental farms at Sibpur, Burdwan, and Dumraon and other places have also been under the direct supervision of these officers.

26. *Emigration to Burma.*—The Director has given his attention to the question of emigration to Burma as a means of relief to the over-populated tracts of Behar and Chota Nagpore, and an agreement has been entered into with the British India Steam Navigation Company, under which that Company has undertaken to reduce the deck fare to Rangoon from Rs. 10 to Rs. 7-8, of which Rs. 2-8 will be paid by the Bengal Government as a subsidy, the balance being paid by the emigrants. It is hoped that local recruiting agencies will soon be opened in various parts of the tracts to be relieved.

27. *Arboriculture.*—With the exception of the planting of fruit trees along the road-sides, which must be regarded rather as an administrative measure adopted for shade purposes and the preservation of road alignments, than as an agricultural experiment, the arboricultural efforts of the department do not seem to have been extensive or productive of much practical good. The Lieutenant-Governor does not, for instance, see much use in planting date-palms where nature has not planted them, or in pushing artificially the cultivation of such trees as the *Eucalyptus*, *Divi-Divi*, or the *rain-tree.*

28. *Silk Experiments.*—The experiments at Berhampur, undertaken with a view to the mitigation of pebrine, were continued by Mr. Nitya Gopal Mukherjee under the direction of the Silk Committee. The information given in the report as to the objects and results of the out-stations opened at Pakhuria,

Alipur, Nagri, and Kalimpong is, however, exceedingly vague, and gives no idea of what Mr. Mukherjee really did at these places during the year.

Since the close of the year it has been decided that the direct control of Mr. Mukherjee's work should be retransferred from the Silk Committee to the Director with a view to his giving more attention to the rearing of healthy silk at the out-stations. The experiments at Berhampur will nevertheless be continued, as also will those of Mr. Keighly in the Midnapore district, in the direction of detecting pebrine and other diseases without having recourse to microscopical examination.

29. *Experimental Farms.*—Agricultural experiments were carried on at the three experimental farms at Sibpur, Burdwan, and Dumraon, and also on a smaller scale in various Government, wards', and private estates in the divisions, especially of Burdwan, the Presidency, Rajshahye, Orissa, and Chota Nagpore, the principal products experimented on being paddy, wheat, potatoes, sugarcane, and fodder grasses.

With regard to paddy and wheat, the chief experiments were made at Dumraon, and were designed to test the relative merits of deep and shallow ploughing and of different kinds of manure, and, in the case of wheat, of well-water and canal-water. With transplanted paddy a mixture of crude saltpetre and linseed cake gave the heaviest outturn, and with broadcast paddy cowdung produced the best results, while deep-ploughing to a depth of four or five inches gave an increase in outturn of 24 seers of grain and 3 maunds 20 seers of straw per acre. Wheat appeared to be particularly benefited here by a manure of saltpetre alone or mixed with ashes, while in the Burdwan farm bone-meal yielded a large increase. The extra yield obtained by irrigating the crop with well-water did not repay the extra expense as against that of canal water The largest outturn of potatoes was obtained at the Dumraon farm with green manures, but it is unfortunate that the outturn of the crops on the Burdwan farm is given per bigha, while that of Dumraon is given per acre, thus rendering comparison difficult. In future reports all outturns should be referred to a common standard. The uncertainty of all these experiments is exemplified by the fact that at Dumraon crude saltpetre applied to paddy failed this year to produce any increase in outturn, although in the preceding year it gave the best results of all manures; and also by the fact that, whereas in Sibpur the experiments in sugarcane showed a distinct advantage in favour of the *Saharanpur* as compared with the *Samsara* variety, the experiments in Burdwan produced a directly opposite result. Among fodder grasses *sorghum* and buffalo grass (*Reana luxurians*) were cultivated with great success at Sibpur. The latter grass gave an outturn of 192 maunds per bigha, and was sold at a net profit of 1 anna per maund.

30. *Agricultural Implements.*—Thirty-two wrought-iron Sibpur ploughs were issued during the year, and are said to have given satisfaction. A native gentleman in the Jessore district expressed an opinion that one ploughing with these instruments was as effective as four or five ploughings with the ordinary native plough. Some interesting experiments in the use of European butter-making machines were made in the Dharampur pergunnah of the Purneah district, by the late Mr. E. G. Williams, Manager of the Durbhunga Raj. The results of these experiments and of trials in other districts tended to show that the European methods might be adopted with advantage in the hills and in the districts bordering upon the hills, but that good results could not be obtained in districts where a temperature of under 75° Fahrenheit cannot be depended upon.

31. *Veterinary Establishment.*—The Director writes:—"The scheme for the establishment of a veterinary college is still under the consideration of Government. No progress appears to have been made in the matter during the year." Government was in fact awaiting the final decision of the Committee of the Sodepore Pinjrapole with respect to a suggested contribution from that institution towards the site and building expenses of the veterinary college. Since the close of the year to which the Director's report relates, Babu Shew Bux Bogla, one of the leading members of the Committee of the Pinjrapole, has generously offered a site and has contributed the sum of Rs. 30,000 towards the college and hospital, thus relieving the Pinjrapole Committee of the necessity of contributing. The work will now be proceeded with without further delay.

32. *Tour.*—Appendix H to the report shows that the Director's tours amounted to 134 days, divided as follows:—

	Days.		Days.
Orissa ...	... 32	Sonthal Pergunnahs ...	... 8
Chittagong ..	... 23	Sujamutha ...	... 7
Dacca, Tipperah, Dakhin Shabazpur	... 16	Hukumapur ...	... 5
		Silk enquiries in Midnapur district	... 4
		On tour with Dr. Voelcker	... 14
Srinagar-Baneli ...	.. 9	Simla Conference ...	.. 16

His Honour has no doubt that Mr. Finucane made great efforts to carry out his inspections effectively, but regrets that he was unable to visit the important settlement operations in the Jalpaiguri Duars during the year. He has been asked to propose a tour of inspection of all the important settlements for the coming season, and the programme will be finally settled on Mr. Finucane's return from leave, and after a decision has been arrived at as to the resumption of the Behar survey and settlement.

33. In conclusion, the Lieutenant-Governor wishes to record that, although the report reviewed above is not as complete and accurate in its details as he desires, he is satisfied that Mr. Finucane has shown ability and energy in his supervision of this important department, and in advising and controlling the settlement officers under his supervision, while he has at the same time paid some attention to the considerable agricultural works which it is his duty to superintend.

Ordered that the Resolution be published in the *Calcutta Gazette*.

Ordered also that a copy of the Resolution be submitted to the Government of India in the Revenue and Agricultural Department for information, and that a copy be forwarded to the Board of Revenue, Lower Provinces, for information, guidance, and explanation on the several points noticed in the Resolution.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

RESOLUTION ON THE BOARD'S LAND REVENUE ADMINISTRATION REPORT FOR THE YEAR 1890-91.

REVENUE DEPARTMENT—LAND REVENUE.

Darjeeling the 6th October 1891.

RESOLUTION No. 1119L.R.

READ—

The Report of the Board of Revenue on the Land Revenue Administration of the Lower Provinces for the year 1890-91.

Read also—

The Board's letter No. 603A, dated 14th August 1891, submitting the Director's report of the Department of Land Records and Agriculture, Bengal, for the year 1890-91.

Preliminary.

These reports have been submitted by the Board with commendable punctuality, and follow the lines laid down of recent years with the approval of Government. The district maps furnished illustrate chiefly the surveys and settlements in progress and prospect under the Tenancy Act and the old Regulations; but this year they include also the Government and tuccavi embankments and important drainage works undertaken by Government for the improvement or reclamation of land for agricultural or sanitary purposes, or protection from floods. These maps have improved from year to year, and sufficiently exhibit the subjects indicated. The provincial map, which was previously designed to show the percentage of the land revenue collections in each district, has been omitted, as it only supplied in a pictorial form the information contained in statistical tables. The arrangement of the Board's report into four parts—(1) the Collection of the Land Revenue, (2) the Administration thereof, (3) Rent, (4) Miscellaneous—and 41 subjects (with sub-divisions) is as good as can be devised. The Lieutenant-Governor has referred to the orders of the Government of India, which ruled only that a separate review of the Director's report was not necessary, and has decided, in the absence of prohibition, to issue another Resolution dealing with its contents.

COLLECTION OF THE LAND REVENUE.

Standard of collections of land revenue.

2. The Government of India having commented unfavourably on the large arrears of land revenue which accrued in 1888-89, the whole subject of the collections of land revenue has been fully examined by the Board and Government before and since the close of 1890-91. For some time past District Officers have been expected to attain a standard of collections of 95 per cent. on the total demand (current plus arrear) from class I, *i.e.*, permanently-settled estates, and 90 per cent. from all other classes of estates. The Board have now, with the consent of Government, issued a circular which prescribes a standard percentage of current collections on current demands as follows:—viz., 99 for permanently-settled estates, 95 for temporarily-settled estates held by the proprietors for definite periods, 93 for ryotwari tracts, 90 for temporarily settled estates managed direct or farmed and Government estates With regard to the balances due from the previous year, it has been enjoined that such arrears ought to be collected wholly or nearly so within the next year. It is admitted that special circumstances may exist from time to time to make the attainment of these ratios impossible; but failure to comply with this standard will necessitate a special explanation from the responsible officers. The Lieutenant-Governor has also recently undertaken a revision of the number, dates, and amounts of the instalments in which land revenue is paid with a view to making them more convenient to the landed interests and the treasury. This measure is not yet matured; but His Honour trusts by these changes to attain a higher rate of collections, both current and arrear, and with greater facility than has ever before been achieved.

3. The numbers of revenue-yielding estates of the several classes have risen considerably within the five years, 1886-87 to 1890-91, both inclusive. The following statement admits of an easy comparison of the figures:—

Numbers of estates of classes I to IV.

	Class I. Permanently-settled estates.	Class II. Temporarily-settled estates.	Class III. Government estates.	Class IV. Ryotwari tracts.	Total.
1886-87 ...	148,732	7,800	3,053	27	159,612
1887-88 ...	150,544	7,855	3,058	28	161,485
1888-89 ...	151,968	7,884	3,307	32	163,191
1889-90 ...	153,609	7,978	3,374	21	164,982
1890-91 ...	154,553	8,049	3,513	21	166,136

These figures show the growth in the number of estates, at the rate of 6,524, in four years, or about 1 per cent. per annum. The increase goes on at a much faster rate in some districts, and the work of officers and their establishment is considerably increased thereby. The subject of partitions has the attention of Government: for the rest, improvement in the methods of administration is the only resource. Some of the sources of growth seem to be avoidable. Thus with regard to such lands as the 34 resumed thanadari lands in Hooghly settled as estates, the Lieutenant-Governor thinks it would be better that such lands should be settled, if possible, with the proprietors of the villages in which they fall, if thanadari lands, or the villages out of which they were originally taken for roads, railways, &c.

4. The Lieutenant-Governor is of opinion that the fourfold classification of estates, which was ordered by Sir G. Campbell in paragraph 2 of the Government Resolution of the 2nd April 1873 on the Board's Land Revenue Report for 1871-72, and was carried out in 1875-76, requires a little modification. The class called temporarily-settled estates is divided into those—(*a*) settled for definite periods, (*b*) managed direct owing to the recusancy of proprietors, (*c*) farmed for the same reason. This classification is incorrect, as estates held direct for want of any one to take the settlement are not temporarily-settled, and should be transferred to the third class. Again, Government estates leased to farmers for a term of years should be transferred from the third to the second class, as they are temporarily-settled.

Classification of estates.

As for the ryotwari tracts, hitherto known as class IV, His Honour believes that there is no real distinction, except that of size, between them and those entered in the present class III as Government estates. The standing order is that lands the property of Government and held under direct management are called "ryotwari tracts" when the area of the tract is not less than 5,000 acres. The size of the tract does not make any real difference in the mode of collecting the revenue, which is done directly through tehsildars. It is true that these are not estates in the ordinary sense of the term. In Jalpaiguri, for instance, the ryotwari tracts are blocks of many hundred jotes, each of which pays revenue separately to a tehsildar, and the jotedars have their ryots under them. In the Tooshkhally estate in Backergunge, on the other hand, the collections are made direct from the ryots; as also in Kalimpong in Darjeeling. It does not, however, appear to His Honour that it serves any useful purpose in this connection to distinguish these large tracts from the scattered estates which are owned by Government as having been bought in at revenue sales, or having never been settled with a proprietor; and he has decided that the present class IV of ryotwari estates should be abolished, and that in future the classification of revenue-paying estates is to be—

I.—Permanently-settled estates.

II.—Temporarily-settled estates, viz.—
- (*a*) those settled for periods with the proprietors:
- (*b*) private estates, leased to farmers for periods;
- (*c*) Government estates, leased to farmers for periods.

III.—Estates held direct by Government, viz.—
- (*a*) those managed for proprietors;
- (*b*) those owned by Government as proprietor.

The Board's statements and appendices should be revised accordingly, and the changes introduced in their report for 1891-92.

Demand.

5. The current demand varies little from year to year, as the following table shows:—

Class of Estates.	1886-87.	1887-88.	1888-89.	1889-90.	1890-91.
	Rs.	Rs.	Rs.	Rs.	Rs.
I. Permanently-settled estates ...	3,22,97,484	3,22,91,720	3,22,90,777	3,22,92,924	3,22,91,318
II. Temporarily-settled estates ...	27,26,304	26,48,556	26,54,561	26,15,488	25,[illegible],300
III. Government estates...	22,36,201	22,32,370	23,08,688	23,32,339	24,22,705
IV. Ryotwari tracts ...	8,35,309	8,43,757	8,59,079	8,62,077	8,71,374
Total ...	3,80,95,298	3,80,16,403	3,81,13,105	3,81,02,828	3,81,67,697

These figures show how stationary the land revenue is in Bengal. The tendency is, in class I to diminish slightly, in class II more considerably; whereas Government estates and ryotwari tracts show a rise, almost continuous in each case, though small in amount.

Financial results.

6. The demands, collections, remissions and balances for the same quinquennial period are exhibited below:—

Year.	Demand.			Collections.			Remissions.	Balances.			Percentage of total collections to total demand (column 7 on column 4).	Percentage of total collections to current demand (column 7 on column 2).	Percentage of current collections on current demand (column 5 on column 2.)
	Current.	Arrear.	Total.	Current.	Arrear.	Total.		Current.	Arrear.	Total.			
1	2	3	4	5	6	7	8	9	10	11	12	13	14
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.			
1846-87	3,80,95,298	25,13,482	4,06,08,780	3,63,87,215	20,20,558	3,84,07,773	1,77,733	16,89,700	3,33,565	20,23,274	94·58	100·82	95·5
1887-88	3,80,16,403	19,17,014	3,99,33,417	3,62,58,301	15,81,740	3,78,40,041	23,820	17,56,538	3,13,018	20,69,556	94·75	99·53	95·4
1888-89	3,81,13,105	20,44,566	4,01,57,671	3,54,36,974	17,32,244	3,71,69,218	30,883	26,73,355	2,84,216	29,57,571	92·56	97·52	92·9
1889-90	3,81,02,828	29,20,128	4,10,22,956	3,62,05,567	24,60,255	3,86,65,822	96,349	18,79,868	3,80,917	22,60,785	94·25	101·5	95·02
1890-91	3,81,67,697	22,46,426	4,04,14,123	3,67,33,458	18,52,435	3,85,85,893	43,066	14,30,852	3,54,312	17,85,164	95·47	101·8	96·2

The Lieutenant-Governor is glad to learn that the Board are issuing the necessary instructions with a view to "showing the real demand of the year and the full amount actually recovered within the year." And they have done a great deal by the addition of columns 23 and 24 to the set of Statements II to IID to correct errors of this character, which arose from showing as arrears instalments which could not legally be collected within the financial year, and from not showing as collections sums which had actually been paid in within the financial year, but which through the dilatoriness of the tauzi and account branches had not been credited in the year's accounts. The total amounts under these two heads were Rs. 1,05,462 and Rs. 1,41,563 respectively. He regards the prompt recovery of the current demand as a more important test of administrative ability than the collection of arrears. He would therefore like the three Statements, which will in future be IIA, IIB. and IIC, to have their columns arranged so as to show the ratio of the last column under three heads—ratio of current collection to current demand, of arrear collection to arrear demand, and the total ratio as at present.

Collections and balances.

7. The main facts of the year are that the current demand was Rs. 3,81,67,697, showing an increase of Rs. 64,869 only from 1889-90, but the current collections increased by Rs. 5,27,891, viz., from Rs. 3,62,05,567 or 95·02 of the current demand to Rs. 3,67,33,458 or 96·2. The arrear collections fell off in actual amount from Rs. 24,60,255 in 1889-90 to Rs. 18,52,435 in 1890-91, and in ratio to demand from 84 to 82 per cent. The total collections of the year under report were Rs. 3,85,85,893 instead of Rs. 3,86,65,822 in 1889-90, but the total balance due at the end of the year was Rs. 17,85,164 against Rs. 22,60,785,

for the preceding year—a reduction of nearly 5 lakhs of rupees. Indeed, taking into account the errors in the demand and the payments not brought to account, referred to above, the true balance at the close of the year was only Rs. 15,38,139, or 3·8 of the total demand, or in other words the total collections were 96·2 per cent. of the total demand. Having regard to the higher standards attained in other provinces of India, which are not permanently settled, the Lieutenant-Governor cannot be satisfied with these figures, especially as regards the arrear collections, but he trusts that with the standards now prescribed, and the greater attention that should be paid to these matters, better results will be attained in future.

Remissions.

8. Out of a total demand of Rs. 3,85,85,893, the remissions of grace amounted to Rs. 43,066 only. Analysing these figures, it appears from the Appendices to the Board's report that Rs. 16,687 were remitted in temporarily-settled estates managed direct, and Rs. 23,488 in Government estates managed direct; total Rs. 40,175, out of the Rs. 43,066. These figures illustrate the loss incurred by direct management, besides the cost of the establishment. The largest remissions allowed in certain districts are stated by the Board in their paragraph 15, with an explanation of the grounds on which they were granted. Sir C. Elliott desires that it may be clearly shown in future what proportion of the larger remissions was allowed in estates under direct management.

Collections in permanently-settled estates.

9. Turning to the different classes of estates, the Lieutenant-Governor notices that, in respect of permanently-settled estates, only two districts, Patna and Shahabad, fell short of the standard hitherto required, viz., 95 per cent., and that in both these cases excessive leniency is considered to have been shown in the working of the sale law. The Board have no doubt called for a full explanation, through the Commissioners from the Collectors in charge. As the total collections were 97·95 on the total demand, and Rs. 10,13,042 were collected out of an arrear demand of Rs. 10,28,456, His Honour does not think there should be any real difficulty in attaining the new standard of 99 per cent., or in collecting all or nearly all the arrears in the ensuing year.

Collections in Wards' estates.

10. The improvement in the collections from Wards' estates shows that there was bad management in former years, apart from the Burdwan Raj default of 4 lakhs of rupees in 1888-89. As their collections ought to be, as a rule, at least double the Government revenue, there is no excuse for arrears under the Court of Ward's management, especially if the order is given that the land revenue is to be a first charge on the estate, to be paid before anything else. It recently came to His Honour's notice that in a trust-estate an arrear was allowed to occur in the Government revenue, so that a payment might be made to the trust fund. It must be distinctly understood that the Government revenue has the priority over all demands, and that the salaries of the Managers and establishments are not to be paid until the Government demand has been provided for. The Board are requested to issue the necessary rules to this effect.

Collections in temporarily-settled estates.

11. The balances in temporarily-settled estates have been reduced from Rs. 5,56,988 to Rs. 4,47,273; but even this is too high a proportion on the total demand of Rs. 31,07,478. The difficulties in Midnapore are well known to Government, and have caused Rs. 2,58,737 of the arrears. The Board (paragraph 22) have drawn attention to the trouble given by the farmers in Eastern Bengal; this remark, though true of Dacca, is not applicable to Chittagong, as the figures in column 16 of Appendix IIB relating to the latter division are comparatively low. Everywhere else, except at Burdwan, Nuddea, and Khulna, the farmers have paid up their dues better, and in most cases remarkably better, than the estates managed direct. The Lieutenant-Governor would discourage direct management as far as possible, but the Commissioner of Dacca should see that more care is taken in requiring adequate security from farmers and punctual payments. Instances of neglect of proper precaution of this kind came recently to His Honour's notice at Mymensingh, and again at Barisal. His Honour entirely agrees with the Board that there seems to have been mismanagement in leasing certain estates to a farmer at Mymensingh without substantial security, and in not realizing the sums due from him while he was making collections from the tenants.

Collections in Government estates.

12. In Government estates the collections were only Rs. 24,73,283 or 83·91 per cent. out of the annual total demand of Rs. 29,47,239, but the balances were reduced from Rs. 6,12,716 to Rs. 4,49,789. The current collections were only 82·2 of the current demand, and the arrear collections 75·5 of the arrear demand. Only in 11 districts the current collections exceeded 90 per cent. of the current demand. These figures speak for themselves of the laxity of administration, and in particular instances the results were very bad, even after all allowances are made. The Board are desired to obtain detailed explanations from the districts named in the margin, against which the percentages of collections in accordance with column 25 of Appendix IIC are recorded and to convey to the Collectors concerned their opinion on the sufficiency of those explanations.

Monghyr ...	49·3	Dacca ...	63·51
Patna ...	58·6	Burdwan ...	65·16
Midnapore ...	60·81	Mozufferpore ...	68·6
Mymensingh ...	61·23	Pubna ...	73·14
Moorshedabad ...	63·	24-Pergunnahs ...	78·3

In comparing the two systems of direct management and farming of Government estates, the financial results in the form of percentages of collections, which are 84·6 and 81·6 respectively appear to recommend the former, but a closer inspection shows that the remissions were Rs. 23,488 under the former and Rs. 679 under the latter system, and of the still outstanding arrears it is anticipated that about Rs. 45,000 will have to be remitted in the directly managed, and less than Rs. 3,000 in the farmed estates. The Lieutenant-Governor understands that in Eastern and Central Bengal at least the reason why these estates belong to Government is to be found in the movements of the great rivers; as they have been either so diluviated that the rents no longer covered the revenue, and they were sold for arrears and bought in by Government, or else they were found in the beds of great rivers and accrued to Government, not having been included in the permanent settlement. The management of such estates is very difficult and laborious in many cases. His Honour in some cases found the receipts to be less, or little more, than the salary of the collecting establishments: there are also great delays over the settlement of these estates, and no doubt much peculation occurs. He would therefore discourage the direct management of these estates, and sell them, where possible, or else farm them out for short terms of five or seven years.

Collections in ryotwari tracts.

13. The total collections of the year from the so-called ryotwari tracts were Rs. 8,62,949 against a total demand of Rs. 9,51,450, or 90·78 per cent., and they were even less than the current demand, Rs. 8,70,430, so that the balances due have increased from Rs. 80,076 in 1889-90 to Rs. 87,239 in 1890-91. The excuses offered for these balances are not satisfactory. While in Darjeeling there were absolutely no arrears at all, they amounted to about Rs. 52,000 in the adjoining and similar tract in Jalpaiguri, and there the Lieutenant-Governor ascertained that there had been great remissness on the part of the tehsildars, who, though the kist fell due on the 15th February, had made no collections of the amount in default by the 1st April. A lax system has been allowed by the local authorities to obtain in this district, and the Lieutenant-Governor has recently issued orders for a reform, which the Board should carefully watch. The balances in Monghyr and Bhagulpore also (over Rs. 12,000 and Rs. 10,000, respectively), are not creditable to the administration.

Estates under direct management.

14. The Lieutenant-Governor has carefully examined the figures in paragraph 42 of the Board's report under Appendix VI, which professes to give full details, district by district, of the state of collections in the khas mehals, and fails to understand how they have been obtained. The totals show 2,029 khas mehals with a current demand of Rs. 29,18,497. Now, by picking out the figures of direct management, there would appear to be—

	Estates.	Current demand.
		Rs.
In Appendix IIB	295	5,02,424
Ditto IIC	1,840	18,10,980
Ditto IID	21	8,71,374
Total ...	2,156	31,84,778

It is not understood why these figures do not harmonize with those in Appendix VI, and the Lieutenant-Governor would be glad of an explanation. He notices that in respect of the districts of Burdwan, Midnapore, Hooghly with Howrah, Rajshahye, Chittagong, Tipperah, Darbhanga, and Cuttack, the figures in column 3 of Appendix VI do not correspond with the totals of the number of estates under direct management, as ascertained from column 4 of Appendix IIB, column 4 of Appendix IIC, and column 3 of Appendix IID, though they do correspond for the other districts. Also, it is not clear why the Sonthal Pergunnahs are omitted from Appendix VI. These points should also be explained. The statements for each district in Appendix VI, and for each division in paragraph 43 of the Board's report, both omit the really important ratio of the collections of current demand. In any district which collects less than the current demand, so that the old arrear not only does not diminish but increases in amount, the officer responsible is *primâ facie* censurable. Sir Charles Elliott notices that the Board are not satisfied with the work of the year, and in future the census cannot be advanced as an excuse for indifferent work. In the following districts the collections fell below the current demands:—Burdwan, Bankoora, Rajshahye, Pubna, Jalpaiguri, Dacca, Furreedpore, Mymensingh, Tipperah, Monghyr, Bhagulpore, Maldah, and every district in the Presidency and Patna Divisions. The Lieutenant-Governor agrees that in such cases as the Majnamoota and Jellamoota estates there should be a thorough investigation of the outstanding balances, and the accounts cleared of irrecoverable arrears. As to the explanations generally offered, Sir Charles Elliott thinks that the Board do not sufficiently bring out the fact that in Eastern Bengal many of these estates are churs, very subject to diluvion, and much injured by the floods of 1890. He has also observed that the kists are unsuited in date and amount to the periods and the volume of the crops. But still, making all allowance for these considerations, the remissness about collections in some place is great and cannot be allowed to continue.

Road and Public Works Cesses.

15. The subject of the Road and Public Works Cesses has been more fully treated in the review of the separate report thereon. The demands, collections, and balances of 1887-88 to 1890-91 are shown as follows (1886-87 having been a half-year only, owing to a change duly recorded at the time):—

Year.	Demands.			Collections.	Remissions.	Balances.	Percentage of balances on gross demand.
	Current.	Arrear.	Total.				
1	2	3	4	5	6	7	8
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	
1887-88	76,13,146	16,61,553	92,74,699	75,35,112	16,398	16,98,409	18·3
1888-89	76,19,896	17,20,662	93,40,558	74,55,777	20,925	17,98,912	19·2
1889-90	76,60,539	18,04,134	94,64,673	77,54,684	76,585	16,58,728	17·5
1890-91	78,38,927	18,35,056	96,73,983	76,81,012	12,061	19,33,855	19·9

The balances are hereby shown at a higher amount than ever before, and the percentage of the balances on the gross demand is nearly 20. Again, as above, His Honour has to remark with disapproval that the collections of the year do not reach the current demand. The occurrence of two holidays on the 28th and 29th March may have affected the payments at the March kist to some extent, as in the case of the land revenue. But this does not really explain the arrears, and the Board rightly continue to urge the District Officers to display greater energy in the realization of the cesses. It is expected that with the simplification of the tauzi and the diminution of the number of kists, which His Honour has in contemplation, better results will be attained.

Redemption of land revenue.

16. The redemption of land revenue is allowed at 25 and 30 years' purchase, under long-standing orders of Government. The only advantage of it to Government is that petty estates which give more trouble than they are worth are thereby removed from the revenue roll. The scheme tried temporarily in Chittagong to induce the holders of estates paying less than one rupee per annum to redeem at only ten years' purchase was taken advantage of by a comparatively small number. It is certainly good

policy to have got rid, even for so comparatively small a sum as Rs. 2,28,899, of 19,281 estates, which paid only Rs. 13,470 Government revenue. The Board appear to have adopted an unauthorised nomenclature in classifying Chinsurah, Baranagore, Punchannogram, and Sahiban Bagicha as Districts.

Remittance of land revenue by means of postal money-orders.

17. The expansion of the system of paying land revenue and other public demands by postal money-orders, since it was extended to all districts from the 1st April 1887, can be seen from the figures subjoined:—

Year.			Number.	Amount of revenue paid.	Average value of each order.
				Rs.	Rs. A.
1887-88	...	...	47,248	2,07,156	4 6
1888-89	...	...	92,402	6,60,800	7 2
1889-90	...	...	139,535	11,11,353	7 15
1890-91	...	...	160,892	15,64,268	9 11

This is a remarkable development. The number of estates has not increased this year in the same ratio as before, but the average value of each order is more than double what it was three years ago. It has been provided during the year that no revenue money-order is to be refused, but that all are to be accepted on account. There is no objection to this arrangement, but, as the Board reported in 1889-90, "the mere fact of a zemindar paying money into a post office by the kist day for a land revenue money-order is insufficient to protect an estate from sale: the land revenue must be paid into the treasury by sunset of the kist day." The Lieutenant-Governor cannot understand why (as the Collectors of Patna and Gya seem to maintain) a money-order should give more trouble than an ordinary revenue chalan, and he will sanction no additional establishments on account of the introduction of this system. It is likely to develop still further; but, considering the number of estates for which the revenue is paid through revenue agents and mukhtars, a limit exists to its operations.

The payment of rents by postal money-orders has only been in force in four divisions since 1st July 1890, so that sufficient time has not elapsed to gauge its working. A large percentage of the money-orders is refused by the zemindars, and one explanation given is that they are under the impression that by receiving them they will admit that the sum remitted is all that is due. It has also been said that the rent-payers frequently give incorrect description of their tenures, or of the instalments due, and omit charges for interest on arrears, thus causing inconvenience in the adjustment of accounts. These points will come under enquiry in due course.

The Sale law.

18. Only 762 entire estates and 309 shares of estates or interests – total 1,071 – were sold during the year out of 14,483 which became liable to sale for non-payment of the dues of Government. The figures of several years past, reproduced here, as follow,

				Defaults.	Sales.
1884-85	...	...	...	10,575	1,836
1885-86	...	...	...	12,445	1,770
1886-87	...	...	...	14,456	1,859
1887-88	...	...	...	14,745	1,863
1888-89	...	...	...	13,153	1,142
1889-90	...	...	...	13,656	1,273
1890-91	...	...	...	14,483	1,071

show the tendency of defaults to increase and of actual sales to diminish. In Orissa there appears to have been some delay in the post office in transmitting the money-orders to the collectorates, but, in accordance with what has already been said, it is undesirable that exemption from sale should be granted as a matter of course, even on this ground. The people should understand that payment into the treasury by sunset of the last day is the essential act, and, if the revenue is paid by money-order, the payment should not be put off till the very latest day. It is presumed that the statement in paragraph 64 of the Board's report has not been prepared strictly according to the financial year, and that the defaults shown include those of 28th March 1890, and not those of March 1891, while the sales are those which took place between 1st April 1890 and 31st March 1891. The Lieutenant-Governor is inclined to think that the policy of leniency to the zemindars in exempting their estates from sales for default has been carried too far, and has already expressed his willingness to support the Board and Revenue Officers in insisting upon a punctual payment of the dues of Government. His Honour lately pointed out to the Board the great delay there is at present in preparing the list of defaulting estates and their

arrears, and in taking action under it, and has suggested the Register to show each stage in the procedure subsequent to the of a payment; he hopes also to be able to reduce the number of instal of majority of instances from four to two. When these changes the effected, Appendix VIII should be remodelled, so as to show for each ment the dates on which the lists of arrears were prepared and the al- auctions held.

Certificates.

19. The number of certificates filed has varied in the last five follows:—

18-6-87	...	...	...	177,618
1887-88	...	.	...	176,608
1888-89	...	...	...	169,072
1889-90	...	...	...	166,951
1890-91		...	...	142,878

This reduction of cases instituted is in itself a matter for congratulation, bi it is also satisfactory that the year closed with fewer pending cases (viz., 78,524, than it began with (viz., 92,866). The Board write:—" It may be observed generally that the certificate procedure, though giving the Government the advantage of securing a decree without the proverbial delay of a civil suit, is attended with delay in numerous cases in the disposal of objections to the decree, which must be fully investigated on evidence, oral and documentary, and in the executive proceedings which follow the provisions of the Code of Civil Procedure Such cases usually occupy several months, and a considerable percentage of the certificates filed in the last month cannot ordinarily be disposed of within the year." The Lieutenant-Governor recognizes the correctness of this view, and requires nothing unreasonable. But he has formed a strong opinion from personal observation of the dilatoriness with which certificate cases are allowed to proceed, and a revised form of the register No. 10 maintained under the Public Demands Recovery Act is under consideration, to admit of a better check being kept on the progress of such cases. The enormous increase of cases in the Orissa Division for the collection of water rate dues is to be regretted, and it is possible that the procedure has been too rigidly pressed in claims for illicit irrigation. The whole subject is under special enquiry. In Midnapore, the large number of defaults was said to be due partly to the low rate of process fees. This has been raised, so as to make the process more punitive. The certificate procedure is, however, more largely used in the collection of the road and dâk cesses than in any other department. It is under c nsideration whether pressure can be put on the payers of Government revenue (who are in nine cases out of ten revenue agents and mukhtars, employed by the landed proprietors, not the proprietors themselves) to induce them to credit the payments they make first to cesses and afterwards to land revenue. When the proprietors are well off and have no difficulty about paying the State demand, but merely default through dilatoriness and want of business habits, there should be no difficulty in explaining to their agents the advantages of the system and obtaining their co operation. As to the certificate procedure generally, His Honour has to complain of the great want of system in pushing on the cases. A Court of Wards' Manager, for instance, will often pour in hundreds of requisitions, get the first process issued, and then do no more. There is room for apprehension that equal laxity is displayed in the collections of the cesses and water-rates.

Realization of Government demands by imprisonment.

20. Sir Charles Elliott will take this opportunity of stating his opinion that imprisonment as a compulsory measure of payment should be discouraged, and no officer should order it unless quite satisfied that the defaulter has concealed property. This conclusion, and the grounds for it, should be entered in the order of imprisonment, and a copy sent to the Commissioner for information in each case. The fact that so many as 63 defaulters served their time, and after all did not pay, shows the futility of the procedure in these cases.

Estates under direct management.

21. The total cost of managing the Government Khas Mehals amounted to Rs. 1,97,538, which is a moderate charge for the collection of nearly 30 lakhs of rupees. The Lieutenant-Governor would be glad if the Board would next year furnish a subsidiary statement showing the details of the expenditure and

especially of the establishments in each district which are charged against these collections. The total sum spent on miscellaneous improvements in these estates was Rs. 80,625, but a large portion of this (Rs. 34,052) was expended on the Orphangunge Market at Kidderpore. The total sum compares unfavourably with previous years, and the amount really spent in the mofussil (Rs. 46,573) is only a little above 1½ per cent. on the collections. Experiments were made with the cultivation of certain staples, but with limited success. Potatoes did fairly well in Cuttack and Jalpaiguri, and Buxar wheat in Hooghly. The record of failures is much longer, and it seems to His Honour that much greater care should be taken in embarking upon such projects. Certain agricultural implements, such as the sugarcane mill and the Sibpur plough, were appreciated; but the latter is too dear for general use. The Lieutenant-Governor notices the doubt expressed by the Board whether the 1½ per cent. contribution for collections on Government estates is not merged in the general income of District Boards, and is glad that enquiries are to be made on the subject. The largest expenditure on roads was incurred in Jalpaiguri—to the amount of Rs. 56,807. With regard to the number of embezzlements committed by the officials concerned with khas mohals, the Lieutenant-Governor presumes that the Board have called for a report showing the amount and character of the security taken from each officer entrusted with collections or the charge of money. It is essential that the security taken should be in cash or Government promissory notes, and not in landed property.

Surveys and Settlements.

22. The survey work of the year has been discussed in reviewing the report of the Director of Land Records. So also have more important settlements, such as those of the Western Dooars, Chittagong, and Orissa. But a great deal of petty settlement work is carried on by the ordinary district staff, who were engaged during the year in concluding 126 original settlements, 324 resettlements, and 141 summary settlements (total 591), and 1,523 cases were left pending at the end of the year. It appears that out of Rs. 71,018 assigned by Government for this ordinary settlement work, the expenditure of only Rs. 41,992 had been brought into account. The Lieutenant Governor made many enquiries on tour regarding these settlements, and is not at all satisfied with the dilatory and unsystematic manner in which the work is conducted. In very few cases is any check kept on the proceedings of the officers, and seldom, so far as could be discovered, does the Collector take any steps to keep himself informed, week by week, or month by month, that real progress is being effected In some districts, where alluvial lands, churs, and dearas have to be settled, the Settlement Officers delay in taking the field when the waters have dried up; but there is no delay on their part in leaving the work on the pretext that the waters are rising again, or for any excuse, such as the heat of the weather, or the compilation of the annual reports at head-quarters. There should be greater despatch with every stage of the case—with the measurement, the testing thereof, &c.—as laid down in the Settlement Manual. His Honour has observed that in many cases no sufficient supervision is applied to settlement work. The fact that the work is mainly left to the Kanungos and Sub-Deputy Collectors, the lowest of the official hierarchy, is enough to show that it would be unreasonable to expect very efficient work. Unless proper guidance is afforded by the superior officers, the cases linger on, and the presumption is that all sorts of irregularities are rife. The register of pending settlements is often kept up in such a way that it is impossible to extract the information required without turning to the registers of previous years or the records themselves. The register should show the history and progress of all settlements, and enable the inspecting officer to keep his eye on them. The Board have been separately asked to improve the existing form of register for this purpose. If progress is arrested by suits in the civil courts, the fact should appear in the register, and the case should be watched with a view to renewal of proceedings wherever possible.

Irrigation and Drainage.

23. The insufficient collection of water-rates has already been noticed. In the statement of the demand, collection, and balances in the districts irrigated by the Sone Canals there is no column to show the current demand, or the percentage of it collected. But the figures given are sufficient to show that the ratio of collections to demand is low, especially in the Patna district, where it has fallen from 38·7

to 34·5. On the Orissa Canal the collections were only 46·1 per cent. of the demand, against 48·7 in the preceding year, and they fell much below the current demand of the year. The capitalization of the maintenance charges of the Dankooni drainage scheme has been sanctioned, and the several projects known as the Howrah, Rajapore and Ampta schemes, undertaken for the reclamation of large tracts of country, are in different stages of progress.

Embankments.

24. In the Government Resolution on last year's report the Board were desired to give special attention to the subject of embankments in their report for 1890-91. A succinct account has therefore been furnished of each of the principal embankments. In accordance with the policy which has been decided on by Government, after mature deliberation, with a view to prevent the rivers from becoming as it were high level canals, always liable to be breached and carry havoc far and wide, a portion of the embankment on the right bank of the Damoodar is being removed, portions of it being left, in lengths of 150 feet each, to form platforms of refuge. Proposals have also been made to allow the Damoodar floods to find more rapid exit down the Rupnarain. The removal of the embankments of the Argowal circuit in Midnapore with a view to raising the level of the tract within the embankment is also under consideration. The plan suggested by the engineers of allowing a river to spill gently over a wide area, rather than to attempt the impossibility of continuing to confine it for ever within banks which must be constantly raised as the bed is raised by the silt, commends itself to common sense, but it is not so readily accepted by the people, whose crops are thus exposed for the time to injury. The question of providing more sluices for the outlet of flood-waters in the embankments constructed in the 24-Pergunnahs to protect the country from tidal inundation is one that will have the immediate attention of Government, when the people interested are prepared to deposit the cost of the works. Action will be taken in the ensuing cold weather to remove under the Embankment Act a considerable length of the northern embankment of the Goomti in Tipperah.

Land registration.

25. The work of initial registration remains to be completed in the Cuttack and Balasore districts only. Orders have been issued for the completion of the remaining work regarding revenue-free properties in both these districts and the submission of the final reports. There has been much too great delay in the execution of this measure. The re-writing of the first registers prepared under the Act has been finished in 31 districts, and some advance has been made in others. The work is of a kind which requires care and accuracy, and it is to be feared that it has in some cases been treated as if it were purely of a formal character. At Mymensingh lately Sir Charles Elliott found register C being re-written without adequate supervision. The work had not been carried out with sufficient intelligence, and no check was kept either over its quality or quantity. He has called for a special report. During the year 55,461 applications were made for registration of mutations under section 42 of the Land Registration Act. These figures give a percentage of 5·7 on the total number of interests registered under initial registration: the percentage has been improving every year since 1887-88, when it was 3·8. It would seem as if the rules issued with the approval of Government for the purpose of furthering registration by means of executive action were producing some effect. More advantage was taken of the Act in the Dacca and Chittagong Divisions than elsewhere.

Partitions.

26. The greater part of the partition or batwara work lies in the Patna, Bhagulpore and Dacca Divisions. The numbers of the cases disposed of during the last five years are given as follows:—

Year.	Patna.			Bhagulpore.			Dacca.		
	Institutions.	Disposals.	Pending at end of year.	Institutions.	Disposals.	Pending at end of year.	Institutions.	Disposals.	Pending at end of year.
1886-87	433	393	1,501	61	86	209	93	68	256
1887-88	436	380	1,557	38	99	148	92	67	281
1888-89	466	408	1,615	45	73	120	127	73	337
1889-90	456	434	1,637	34	50	104	153	93	397
1890-91	446	393	1,690	48	25	127	176	121	453

These figures show that in two divisions—Patna and Dacca—the number of cases pending is steadily increasing, for the simple reason that the disposals never equal the institutions. In Monghyr the progress was unsatisfactory this year, and is accounted for by the ill-health of the late Collector. Government are in correspondence with the Board on the question of amending the Partition Act, and a report is awaited on the proposal to diminish the number and character of appeals by disallowing appeals on interlocutory subjects, and by giving to Deputy Collectors the powers of Collectors. The Lieutenant-Governor has had reason, from some cases which have come under his notice, to express a fear that proper control is not exercised over the special officers in charge of this work, and that they are not always required to show a prescribed standard of progress or outturn of cases.

Land Acquisition.

27. The Board were asked last year to pay special attention to such questions as the supervision necessary to check the irritating and expensive delay which often occurs in land acquisition proceedings, the difficulties which have arisen in assessing the value of the land taken up, and how those difficulties have been dealt with. They have during the year submitted special reports in connection with complaints made by the authorities of the Bengal-Nagpur and Tirhoot State Railways regarding the excessive cost of the land acquisition establishment and the rate of progress. It appears also that delays are often caused by the parties interested not answering the notices served on them, and by the time taken in disposing of cases pending in the Civil Court. Also, complicated enquiries have to be made to determine the market value of land with due regard to the interests of all parties. All these difficulties are enhanced by the systematic neglect of the parties interested to attend the Collector's office and assist him in arriving at a proper valuation. The Board allude to the special instructions which they have issued to ensure regularity and promptitude, and state that the periodical returns are carefully scrutinized. The Lieutenant-Governor has recently called for the submission of a number of these returns. As he has found reason to be dissatisfied with the manner in which lands are acquired for railways and other minor projects, he has caused the Board to be separately addressed with a view to effecting some improvement.

Advances.

28. The sum of Rs. 85,122 is said to have been granted for advances under the Land Improvement Loans Act, 1883, on the requisition of local officers, though the actual advances only amounted to Rs. 21,600. It should be explained why there is so great a difference between these two sums. The Lieutenant-Governor fully concurs that the applications for these loans should be carefully checked and the proper application of the funds watched. Under the Agriculturists' Loans Act of 1884 the sum of Rs. 1,55,835 was advanced, of which Rs. 64,318 were issued in the Presidency Division for the relief of the distress caused by floods in Nuddea, Jessore, and Moorshedabad, and Rs. 83,582 distributed in the Patna Division, viz., Rs. 11,050 in Mozufferpore to those who suffered from the cutting of the Turki embankment, and Rs. 68,481 in Sarun to those who lost their bhadoi crops by the Gogra floods. Nothing is said as to the outstanding advances of previous years. His Honour presumes that some of these amounts have been recovered in accordance with the rules under which the advances were made. Next year full information should be given, district by district, to show the outstanding debts, the loans of the year, the recoveries during the year and the balance due at its end. The recipients must be made to understand that loans are meant to be repaid, and are not gifts.

Working of the Bengal Tenancy Act and relations between landlords and tenants.

29. In the Resolution of 3rd October 1889 on the Board's Report for 1888-89, a special report on the working of the Bengal Tenancy Act, after it had been in force for five years, was asked for. The Board are collecting the materials for this report, but the census has retarded its submission. They therefore have little to add but confirmation to their view, previously expressed, "that the landlords and tenants have not yet acquired a full knowledge of the provisions of the Act; that they have abstained to a great extent from appealing to it; and that it has not tended to increase disputes and litigation. The working of the Act so far has been, on the whole, beneficial, although defects have been found in some of its provisions." His Honour has no desire to anticipate

the special information which he may expect to receive before long. So far as it has come before him, the Act is taking its place as the general rent law of the province, and its main provisions appear to be well understood. It is stated that there were not very many cases of serious manifestations of ill-feeling between landlords and tenants. Disputes occurred in several districts, but at the same time previous disputes had either been amicably settled or matters had quieted down, as in the case of the indigo disputes in Jessore and the strained relations which prevailed in Killah Aul in Cuttack. The Soojamoota ryots continue to give trouble. In Pubna there are said to be three parties at variance—the old impoverished landlords, the wealthy men who seek to obtain property or to add to their lands, and the ryots: they deeply distrust one another, and frequent acts of violence occur. The evils of absentee landlordism and of the misconduct of local agents are common. The old difficulties between the Maharajah of Hill Tipperah and his tenants in the estates he owns in the Tipperah and Noakhali districts also continue. In Gya a point, important in its bearing on the rent question, has arisen with reference to a ruling of the High Court regarding *abwabs*. The *Kharwars* in the hilly tract to the south of Shahabad are trenching on the prerogatives of the zemindars. On the other hand, the management of the Darbhanga and Bettiah estates is favourably mentioned. There has been a feeling of agitation and discontent for some time past in a portion of Chutia Nagpur, which has induced Government to apply to the Government of India for the extension of the Tenancy Act to that Division. The Kol cultivators are on bad terms with their landlords, and are said to harass them by refusing to pay rent to them direct, but depositing it in court, and by declining to render them any of the customary services. This portion of the Board's report will be considered in the Judicial Department, and the Lieutenant-Governor will let it be known that any resort to violence will entail very serious consequences on the offenders.

Notices of transfer and landlords' fees.

30. The number of notices of the voluntary transfer of tenures, which in previous years ranged as high as 89,564, has fallen to 27,636. This decrease is again attributed to the restriction of the issue of notices in cases of transfer to entire permanent tenures, to the exclusion of fractional shares and ryoti holdings at fixed rates: applications for their registration were formerly wrongly admitted. The Lieutenant-Governor understands that there is a body of opinion in favour of repealing sections 12-15 of the Act. He will not attempt to prejudge the point at present. But, so far as their retention depends on the present system of payment of landlords' fees, he cannot think that they are entitled to much support on that ground. It has come to his notice that these numerous petty payments present many openings to fraud and cause much trouble. In consequence of the reluctance of the landlords to accept the fees, a large proportion is deposited in the treasury, and probably will eventually lapse to Government. This was not, it is presumed, the original intention of the Legislature.

Preparation of price lists.

31. No objection has been taken in any case to the price lists of staple food-crops, which continue to be duly prepared and published every month. As the Board say, the object and the importance of these lists appear not to be understood or appreciated by the general body of the cultivating class.

Settlements.

32. Besides the several important settlements in progress in the Chittagong district and in Orissa, there were a number of settlements of some size in Backergunge, Midnapore, Tipperah, Beerbhoom, which have been duly noticed in the separate Resolution which the Lieutenant-Governor has directed to be issued on the Director of Land Records' report. He has ordered the preparation of two settlement reports annually by the Director—one, mainly financial and statistical, to cover the financial year; the other, the Administration Report, to show the results of the survey year, which runs from the 1st October to the 30th September. All officers in charge of settlement operations are in future to furnish half-yearly progress reports of their work.

Rent suits.

33. Rent suits are tried by Revenue Courts under Act X of 1859 only in Orissa, Darjeeling, Julpaiguri, and Manbhoom, and in the rest of the Chutia Nagpur Division under Act

I (B.C.) of 1879. The diminution of suits from 29,058 to 28,623 is satisfactory, so far as it goes. His Honour would wish the Board to enquire into the practice said to have been introduced in Manbhoom of bringing suits for monthly kists against recalcitrant tenants. The Commissioner has reported that this abuse was checked by the Munsiff refusing to award costs. It is not a practice to which the Lieutenant-Governor can lend the countenance of Government, calculated as it is to harass the ryots excessively. This appears to afford another reason for the introduction of the Tenancy Act into the division, so that protection may be afforded to the ryots by section 147 thereof. It is satisfactory that no more than 126 notices of enhancement issued in 1890-91 in the eight districts in which they are still legal. Where the Tenancy Act is in force, they have been abolished, and the institution of the enhancement suit is all the notice that is afforded to the tenant.

MISCELLANEOUS.

Inspections by Collectors of their own offices.

34. The half-yearly inspections of their own offices by Collectors are said to have been regularly made, with few exceptions, and it is added that the inspections appear to have been full and no irregularities of importance were disclosed. It is presumed that the Board have satisfied themselves of the completeness of these inspections from the reports submitted to the Commissioner. In one district (Moorshedabad) the Lieutenant-Governor lately found that the Collector had on his half-yearly inspection discovered very serious irregularities, for which some of the principal ministerial officers were responsible. The Board's own rules are perfectly clear on the subject of these office inspections, and, with the Inspection Manual provided to their hands as a guide, officers have no excuse for failure to carry out this important duty. Two years ago Sir Steuart Bayley had it recorded that "he must insist again on the standing orders, which have long been in force, being observed, and he looks to the Commissioner and the Board to ensure that these inspections are made in an efficient and useful manner." The Lieutenant-Governor requests that the Board will in future in their annual reports give the names of those officers who have failed to make both the half-yearly inspections of their offices fully, and will exclude those officers from the list of those specially commended. Apart from the above, the Lieutenant-Governor considers that the gazetted officers of the Subordinate Executive Service should more frequently inspect the departments in their charge. At present it seems to him that they do not sufficiently impress their personality on their subordinates, and, that the heads of such offices as the Record-room, the Nizarat, the Tauzi, the Road Cess Certificate office, &c., receive but little direct guidance and supervision from the Deputy Collectors who are in charge. They should exercise a constant supervision, take the initiative in keeping their establishments fully employed, and not wait for the subordinates to submit matters at their own pleasure. It is for the Deputy Collectors to guide their clerks and mohurrirs, and thus facilitate the work of the District Officers.

Training of officers in survey and settlement work.

35. A small number of young officers were, in accordance with the policy of Government, employed on survey and settlement duties as opportunities presented themselves. But, with few exceptions, these opportunities can hardly have been sufficient to give them much insight into the questions they would have to deal with in settlement operations of any magnitude. Sir Charles Elliott has lately received with pleasure a very favourable report of the proficiency in survey work attained by Mr. C. G. H. Allen, Assistant Settlement Officer, now temporarily in charge of the Chittagong settlement. He is aware that the conditions of revenue work in Bengal, dominated as everything is by the Permanent Settlement, do not readily lend themselves to the acquisition of such knowledge of questions connected with the land as is ordinarily gained by civil officers in other parts of India; but he hopes, so far as the exigencies of the other branches of the public service admit, that a real training in Settlement work will be obtained by a certain number of junior officers in the Orissa and Chittagong operations already commenced, and in those which have for some time past been in contemplation in Behar.

36. Before concluding, the Lieutenant-Governor will take this opportunity to notice the absence from the Board's report of any mention of any tours of inspection undertaken by the Members of the Board. He has reason to believe that one or other of them has from time to time been absent from Calcutta, for such purposes as visits to the opium factories, or on duty connected with the Sanitary Board; but in his opinion much more than this is required. He thinks that some system should be organized by which the Members should either spend a definite portion of the year on tour, or should visit a specified number of districts in the year. It would be advantageous both to themselves and to their subordinates if they were to inspect Commissioners' offices on the revenue side, collectorates in all branches of revenue work, distilleries and survey and settlement operations, as far as they are able. Sir Charles Elliott is aware that the Members of the Board have to hear important revenue appeals, and that they are responsible for correspondence in affairs of considerable moment. But he believes that the appeals can be fixed and heard according to arrangement, and he presumes that correspondence can be carried on and disposed of by the Members when on tour. One Member only would ordinarily be absent from Calcutta at a time, so that urgent matters could be disposed of by the Member at the Presidency. At any rate, the Lieutenant-Governor may safely say that he would welcome the co-operation of the Members of the Board in improving the mofussil revenue administration of the Province and assisting in the execution of the orders of Government.

Tours of Members of the Board.

37. It now only remains for the Lieutenant-Governor to thank Mr. Halliday and Sir H. Harrison for their valuable services in the Board of Revenue during the year 1890-91. The greater portion of the work in the Land Revenue Department fell upon the former as the Senior Member of the Board. Mr. Halliday is about to retire from the service, but his name will long be remembered in Bengal and Behar, by his fellow-workers and the people, for the many excellent qualities which have marked his career as an administrator. His Honour desires to add his acknowledgments to those offered by the Board to Mr. Smith, Mr. Worsley, Mr. Lyall, and Mr. Toynbee for their work in the Revenue Department during the year. He has been glad to peruse the list of the District Officers specially commended by the Board, and their names will be noted in the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

APPENDIX TO THE RESOLUTION ON THE LAND REVENUE ADMINISTRATION REPORT FOR THE YEAR 1890-91.

Percentages of current collections on current demand of Land Revenue during 1890-91 (*after excluding nominal balances from the demand of the year, and crediting the collections made within the year, but not credited in the accounts of the year*).

RESOLUTION ON THE ADMINISTRATION REPORT OF THE COMMISSIONERS OF THE PORT OF CHITTAGONG FOR THE YEAR 1890-91.

GOVERNMENT OF BENGAL,—MARINE DEPARTMENT.

Dated Darjeeling, the 24th September 1891.

RESOLUTION No. 173T.—Marine.

READ—.

The Administration Report of the Commissioners of the Port of Chittagong for the year 1890-91.

Financial.

The financial position of the Chittagong Port Fund on the 31st March 1891 is exhibited in the subjoined statement:—

	Rs.	A.	P.		Rs.	A.	P.
Opening balance on the 1st April 1890 ...	1,10,397	5	3*	Expenditure during the year 1890-91 ...	57,428	11	3
Permanent advance ...	100	0	0	Balance on the 31st March 1891	*1,14,931	12	6
Receipt during the year 1890-91	61,863	2	6				
Total ...	1,72,360	7	9	Total ...	1,72,360	7	9

* Includes Rs. 20,200 invested in Government securities.

The Commissioners of the Port are having a steam-tug built at a cost of £11,500, and a loan to cover this expenditure has been granted by the Government. With this exception, the Port of Chittagong is free from debt.

Rules, bye-laws, &c.

2. During the year under review, rules have been made under sections 17, 45, and 64 of the Chittagong Port Commissioners Act, 1887, and a revised scale of tolls, prepared under section 33, has been sanctioned. The Government has also made revised rules for this port under section 6 of the Indian Ports Act, 1889. A book containing the rules, bye-laws, and orders applicable to the port has been printed under the orders of the Government, and copies have been furnished to the Port Commissioners for distribution to those concerned in the trade of the port.

Shipping.

3. The subjoined table shows the number and tonnage of the vessels which visited the port during the year, as compared with the figures of the two previous years:—

		1888-89.		1889-90.		1890-91.	
		Number.	Tonnage.	Number.	Tonnage.	Number.	Tonnage.
European vessels trading with Foreign ports ...	Entered	41	55,774	39	60,701	42	62,042
	Cleared	44	59,655	37	59,355	37	57,288
Native craft trading with Foreign ports	Entered	4	814	4	808	...	...
	Cleared	6	949	4	701	1	143
Vessels trading with home ports	Entered	845	165,318	982	176,550	951	168,376
	Cleared	836	165,495	983	180,053	946	164,073

4. Of the 38 vessels which cleared for foreign ports during the year under review, 19 were bound for the United Kingdom, 3 for Ceylon, 6 for the Mauritius, 7 for New York, 1 for Hamburg, 1 for Aden, and 1 for Trinidad. Those for the United Kingdom, New York, and Hamburg, numbering in all 27, carried jute, while the remaining 11 carried rice. The number of vessels that cleared during the previous year with jute was 33, and with rice 8.

Foreign trade.

5. The total value of the foreign trade during the year was Rs. 1,32,41,393, of which only Rs. 8,75,536 were under imports. The nature of the trade will appear from the

following statement, which shows a net decrease compared with the previous year of Rs. 18,84,265:—

	1889-90.		1890-91.		INCREASE.		DECREASE.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
Exports.		Rs.		Rs.		Rs.		Rs.

Total Foreign trade	......	1,51,25,658	......	1,32,41,393	......	......	......	18,84,265

6. In the coasting trade the exports increased, but the increase was more than counterbalanced by a decline under imports, the net result having been a decrease in the toal coasting trade of Rs. 10,50,182.

Coasting trade.

The details of this trade are given in the following statement:—

EXPORTS.	1889-90.	1890-91.	Increase.	Decrease.
	Rs.		Rs.	Rs.
Apparel, &c.	16,100	20,226	4,126	......

7. The most prominent fact brought out by the above tables is the important position which the jute trade occupies at the port of Chittagong. The exports of jute from Bengal last year were the highest yet recorded, but Chittagong did not get so large a share of the trade as usual, the exports of that port showing a decline of 126,010cwt., which is the cause of the decrease both in the foreign and the coasting trade. The report under review does not explain the cause of this decline. It is remarkable that the figures given above show the price of jute as only fallen from Rs. 9 to Rs. 8 per cwt., while the reports received from District Officers speak of the price which reached the cultivator as being as low as Re. 1-8 sometimes instead of Rs. 5 per maund.

Jute trade.

A large proportion of the jute exported from Chittagong is brought from Naraingunge in native brigs, and in the Report on the Administration of the Customs Department it is explained that exporters from the latter place preferred to send the bulk of their jute by inland routes to Calcutta instead of sending it by sea to Chittagong. Some explanation of this preference is perhaps to be found in the fact that in the past two years nine of the vessels trading between Chittagong and Naraingunge have been wrecked. The river Megna leading to Naraingunge has not been buoyed or thoroughly surveyed; the winds are violent at times, and it is not to be expected that the river can be navigated by sailing vessels without occasional casualties. During the last nine years the quantity of jute exported from Chittagong has varied between fifty and seventy-five thousand tons, and it does not appear to be probable that the higher of these limits will be largely exceeded until a railway has been built which will enable exporters to bring jute to Chittagong without incurring the dangers which are inseparable from the navigation of a river like the Megna.

8. The rice trade of Chittagong is liable to considerable fluctuations. During the last nine years the quantity exported has varied from nineteen to sixty-five thousand tons. Last year's export amounted to 30,499 tons, showing an improvement of 6,000 tons on that of the previous year. Upwards of one-third of the quantity exported went to foreign ports.

Rice trade.

The average value of the rice exported from Chittagong to foreign ports was Rs. 3·5 per cwt., and of that exported to home ports Rs. 3 per cwt. The corresponding figures for rice exported from the Orissa ports were Rs. 3·9 and Rs. 2·8. The export of rice from the Orissa ports was more than double that of the previous year; 32,110 tons went to foreign ports and 62,813 tons to home ports. The exports from Calcutta also show a large increase, and the average value of the rice exported to foreign ports was Rs. 4·4 per cwt. There appears to be room for a large increase in the quantity of this commodity exported from Chittagong to foreign ports.

9. The total quantity of tea exported amounted to 1,235,448lbs., of which only 54,445lbs. went to foreign ports. The remainder is sent to Calcutta for re-exportation from there. The direct shipments to foreign ports show a slight tendency to increase, and this tendency may be expected to grow stronger in the future.

Tea trade.

10. Salt is brought to Chittagong in the ships which go there for export cargoes of jute and rice. The imports last year amounted to 19,253 tons, showing an increase of 7,000 tons over those of the previous year. A considerable portion of the salt is transported to Naraingunge in the vessels which bring jute from that place.

Salt trade.

11. The imports of petroleum from America increased in value by Rs. 1,21,608, against which has, however, to be put a decrease of Rs. 30,431 in the value of the oil imported from Burma. The total value of the imports was Rs. 4,93,215, while the value of the exports only reached Rs. 58,821.

Petroleum.

12. The value of piece-goods imported from home ports shows an increase of Rs. 3,50,550, but the report suggests that there was a corresponding decrease in the quantity imported by inland routes. The total value of this trade is considerable, and it may be expected that the economy of direct importation will before long be recognised. Sugar and other provisions show increases, due partly to the presence of troops in the Chittagong Hill Tracts.

Piece-goods and other articles imported from home ports.

13. The principal fluctuations in other articles of export are to be found under cotton and hides, in both of which there was a decrease. That under cotton is attributed to a short crop in the Hill Tracts, and that under hides to smaller mortality amongst the cattle in the districts from which the supply is derived.

Cotton and other articles exported to home ports.

14. The appliances of the port are reported to have been kept in good order during the year. The depth of water on some of the bars in the river appears to have decreased slightly, but as no serious accident occurred through this cause, the state of the river may be regarded as satisfactory.

Port appliances.

15. The lights and fog signals of all descriptions of vessels are stated to have been carefully inspected during the year, and several native vessels were prevented from clearing until their side-lights had been put in order.

Lights and fog signals.

16. The health of the shipping in the port was again unsatisfactory. Seventy-three persons were admitted into the municipal hospital against the same number in 1889-90. Of these, 64 persons were discharged, said to have been cured partially, 6 withdrew, and 3 died. The number of deaths in 1889-90 was 6. At the close of the year there was a severe small-pox epidemic which extended to the shipping. Of the 8 cases that occurred, 7 were cured. In the eighth case the patient was also attacked by cholera and died.

Health of shipping.

17. Hospital port dues were levied at Chittagong on all ships manned by European crews at the rate of one anna a ton with effect from the 1st of April 1890; and in deference to the wishes of the local authorities the Government sanctioned an arrangement under which the proceeds were appropriated mainly to the payment of a fixed salary to the Civil Surgeon for attending on the shipping. The arrangement did not prove satisfactory, and the order authorizing the levy of the dues has been cancelled.

Hospital port dues.

18. A new light-house has been built at Norman's Point, and an occulting light of the fourth order has taken the place of the old beacon lights. The first order revolving light which is to be erected at Kutubdia has arrived at Calcutta, but its erection has been delayed through some of the glass prisms having been broken in transit from Bombay. New prisms have been ordered from England, and the light will be erected during the coming fair season.

Light-houses.

Pilotage.

19. The state of the Pilotage Fund is shown in the subjoined table—

	Rs.	A.	P.		Rs.	A.	P.
Receipts during the year 1890-91 ...	10,858	8	3	Balance at debit on the 31st March 1890 as per last report ...	4,970	6	4½
Balance at debit on the 31st March 1891 ...	8,171	0	5¼	Disbursements during the year 1890-91 ...	14,059	2	4
Total ...	19,029	8	8¼	Total ...	19,029	8	8¼

The distribution of receipts and charges between the port and pilotage funds was examined during the year, and under the revised arrangements lately sanctioned it is expected that the receipts on account of pilotage will meet all the expenditure connected with pilotage. The fees for pilotage remain as before.

20. The working of the Pilot Service was satisfactory, there having been no accidents of any consequence to vessels whilst in charge of pilots.

By order of the Lieutenant-Governor of Bengal,

J. M. McNEILE, *Col.*, R.E.,

Secretary to the Government of Bengal.

RESOLUTION ON THE ANNUAL REPORT OF THE PORT OF CALCUTTA FOR THE YEAR 1890-91.

GOVERNMENT OF BENGAL—MARINE DEPARTMENT.

Dated Darjeeling, the 29th September 1891.

RESOLUTION No. 183T.—Marine.

READ—

The Annual Report of the Port Officer of Calcutta for the year 1890-91.

The report is submitted by Lieutenant E. W. Petley, R.N., who held charge of the Port Office until the 4th of March 1891, when he went on privilege leave. During his absence, Mr. A. J. B. Milner, the senior Branch Pilot, acted as Port Officer.

Office accommodation.

2. The new building designed for the accommodation of the Port and Shipping Offices was completed during the year, and the offices have been moved into it. The Engineer and Shipwright Surveyors and the Health Officer of the Port have their offices in the same building.

Strength of the Pilot Service.

3. The strength of the Pilot Service at the close of the year 1890-91 was 60 pilots of all grades and 16 leadsmen. Five vacancies occurred during the year, and were filled by the promotion of qualified leadsmen apprentices. Two leadsmen apprentices were admitted locally and two were brought out from England during the year.

Leadsmen's quarters.

4. The leadsmen apprentices continued to reside in the houses rented by the Government for that purpose. As in the previous year, the quarters were managed by a Mess Committee, and the Port Officer, who frequently visited them, found that they were kept in good order. The leases of the two houses which have been used as quarters for some years past expired recently, and another house has now been rented which provides equally good accommodation at a somewhat lower cost.

Shipping.

5. The subjoined table exhibits the number of arrivals and departures of ships during the past three years—

	1888-89.			1889-90.			1890-91.		
	Number.	Gross tonnage.	Net tonnage.	Number.	Gross tonnage.	Net tonnage.	Number.	Gross tonnage.	Net tonnage.
Arrivals ..	1,037	2,246,857	1,615,935	1,038	2,250,948	[illegible]	1,044	2,456,656	1,716,920
Departures	1,034	2,240,444	1,608,656	1,018	2,202,819	1,570,776	1,052	2,490,518	1,737,668
Total .	2,071	4,486,301	3,224,591	2,056	4,453,767	3,174,920	2,096	4,947,100	3,454,588

6. These figures do not include 8 light-vessels, 14 pilot brigs, and 53 other Government vessels; 6 vessels put back, steam-tugs which are constantly moving up and down the river, and the steamers trading to the Orissa ports. Of these latter, there were 241 arrivals and 242 departures. They are also exclusive of native craft.

7. The following statement shows the number of vessels drawing 21 feet and over, which were piloted inwards and outwards during the year under review and the previous year:—

Year.	Steamers or sailing ships.	21 to 22 feet.		22 to 23 feet.		23 to 24 feet.		24 to 25 feet.		25 to 26 feet.		26 to 27 feet.		Total.	
		Inward.	Outward.	Inward.	Outward.	Inward.	Outward.	Inward.	Outward.	Inward.	Outward.	Inward.	Outward.	Inward.	Outward.
1890-91 ...	Steamers	36	83	33	100	41	119	18	72	..	12	...	1	128	387
	Sailing ships...	49	67	45	49	7	12	3	1			...	...	104	129
	Total .	85	150	78	149	48	131	21	73	...	12	...	1	232	516
1889-90 ...	Steamers	27	68	59	106	43	92	11	63	3	11	...	1	143	341
	Sailing ships...	61	85	48	79	11	15	2	...	...	2	...	...	122	181
	Total ...	88	153	107	185	54	107	13	63	3	13	...	1	265	522

The average tonnage both of steamers and sailing vessels visiting the port of Calcutta has increased from 2,166 tons in 1889-90 to 2,360 tons in 1890-91; but it would appear from the figures given in the above table that the total number of vessels drawing over 21 feet was less than in the preceding year, though the number drawing from 23 to 25 feet slightly increased.

8. To meet the increase in average burthen, the tonnage scale according to which vessels are distributed amongst the several grades of pilots has recently been readjusted.

Casualties.

9. There were 47 cases of grounding and 12 cases of collision during 1890-91, against 39 and 5 in the year preceding. None of these casualties resulted in the loss of a vessel, but in five cases considerable damage was done. Of the 47 cases of grounding, 30 were accidental, and 6 due to alteration of channel. In the remaining 11 the pilot was in fault. Eight of the collisions were accidental; for the remaining 4 the pilots were responsible. The percentage of casualties during the year amounted to 2·81 against 2·14 in 1889-90 and 2·99 in 1888-89. These percentages include every case of grounding, however slight. The Lieutenant-Governor regrets that the standard of the previous year has not been maintained, and that four collisions were caused by imprudence or unskilfulness on the part of the pilots. His Honour trusts that it will be the endeavour of all members of the Service to regain the standard of 1889-90, which is the best on record for the past 15 years.

State of the channels.

10. There has been no change in the Eastern Channel, and the Gaspar has remained steady; but the Lower Saugor Road has caused considerable anxiety. There is said to be now a bar of only 17 feet right across the channel midway between the Long Sand Light and the Long Sand Spit Buoy. The Eden and the remaining channels below Diamond Harbour have remained fairly steady, but the Nynan and Anchoring Creek tracks were in a bad condition, especially during the cold-weather months. Fifteen inward-bound and four outward-bound vessels were neaped for want of sufficient water over the bars. As observed in the Resolution on last year's report, these figures do not take account of vessels being kept in the port for want of water over the bars during certain stages of the tides. Were these cases included, the number of outward-bound vessels delayed would be higher.

Government vessels.

11. The steamer *Guide* was docked during the year to have her bottom cleaned and painted. This vessel made 32 trips during the year, including 20 to the Sandheads, 6 to the Orissa ports, and 1 to Chittagong. The *Coleroon* was docked twice, the *Fame* once, and the *Sarsuti* three times. The *Fame* was run into, while at anchor on her station, by the ship *Maulesden*, and sustained considerable damage, which was made good at the cost of the *Maulesden*.

Examinations.

12. The number of certificates of each class granted to masters, mates, and engineers after examination at Calcutta is shown in the subjoined table:—

Nature of Certificates.	Candidates.	Total number examined.	Result.			Provisional certificates granted.	Renewal of certificates.
			Passed.	Failed.	Withdrew.		
Colonial ...	Master	14	14	...	...	...	...
	First Mate	38	33	4	1	...	2
	Only „	1	1	...	...	...	...
	Second „	15	12	3	...	...	...
	First class Engineer	4	2	2	...	...	...
	Second class Engineer	10	7	3	...	...	...
Local ...	Master	1	1	...	...	...	...
	Mate	...	...	...	...	..	...
	Engine-driver under Act VII of 1884...	2	2	...	..	...	...
	First class Master (inland) ...	5	4	1	...	...	..
	Second class Master „ ...	77	62	15	...	...	..
	Engineers „ ...	1	1	...	...	...	...
	Engine-drivers „ ...	36	18	18	...	...	...
	Total ...	204	157	46	1	...	2

In addition to the above, two candidates obtained certificates as steam-tug pilots, and three as pilots of steamers plying between Calcutta and the Orissa ports.

Registration.

13. Three vessels were registered under the Merchant Shipping Act, 1854, and the registry of one vessel was transferred.

Surveys.

14. The following statement shows the number and description of vessels which were surveyed during the year under the several Acts relating to Merchant Shipping:—

Description of Vessels.	Number of vessels.	Number of visits made.	Number of certificates granted.
Inland steam-vessels under Act VI of 1884 ...	126	436	125
Steam-ships under Act VII of 1884	50*	248	47
Native passenger vessels under Act X of 1887 ...	19	19	......
Emigrant vessels under Act XXI of 1883 ...	32	195	......
Surveys for measurement of tonnage and registration	5	6	......
Total ...	232	904	......

* 41 of these vessels were surveyed at the same time under Act X of 1887.

The certificates of two vessels which sustained damage were cancelled.

By order of the Lieutenant-Governor of Bengal,

J. M. McNEILE, *Col.*, R.E.,

Secretary to the Government of Bengal.

SALARY AND STATUS OF ASSISTANT SURGEONS.

The following letter, conveying the orders of the Government of India on certain questions affecting the emoluments and official status of Assistant Surgeons in Bengal, is published for general information.

MUNICIPAL DEPARTMENT, MEDICAL, H. H. RISLEY,

The 29*th Sept.* 1891. *Offg. Secretary to the Govt. of Bengal.*

No. 591, dated Simla, the 21st September 1891.

From—J. P. HEWETT, ESQ., C.I.E., Deputy Secy. to the Govt. of India, Home Dept.,

To—The Secretary to the Government of Bengal, Municipal (Medical) Department.

I AM directed to acknowledge the receipt of your letter No. 1372, dated the 5th July last, forwarding a series of memorials from certain Assistant Surgeons in Bengal in which they pray for an improvement in their emoluments and official status.

The complaints of the Assistant Surgeons relate chiefly to the following matters:—

(*a*) the insufficiency of their present grade pay;
(*b*) the fact that they are not more frequently appointed to posts in the Uncovenanted Medical Service and to the medical charge of civil stations;
(*c*) the effect of the working of Rule 12 of the Dispensary Manual; and
(*d*) the pay given to supernumeraries.

2. In reply, I am to say that the Government of India concur entirely with the conclusions arrived at by the Bengal Government on the first three points. In their opinion no valid reasons have been advanced for raising the present grade pay of Assistant Surgeons. As His Honour has pointed out, the reservation of Civil Surgeoncies to Commissioned Medical Officers interferes with the more general employment of Assistant Surgeons as Civil Surgeons, and, in view of the necessity for providing for a war reserve, the Government of

India are unable to reduce the number of stations reserved for Commissioned Medical Officers in Bengal. The Bengal Government are prepared to employ Assistant Surgeons in the charge of stations whenever the staff of Commissioned or suitable Uncovenanted Officers falls short, and this course goes as far as is possible in the direction of the prayer of the memorialists. The proposal of His Honour the Lieutenant-Governor to meet from Provincial funds the increased pay of an Assistant Surgeon who becomes entitled to promotion, when the local body in whose service he is employed is really unable to bear the additional charge, has removed what was in the opinion of the Government of India a substantial grievance.

3. The Government of India understand that there are two grievances in respect of the supernumerary pay: *first*, that supernumerary Assistant Surgeons, while unemployed, draw pay at a reduced rate, viz., Rs. 50 if in the third grade, and Rs. 100 if in the second grade; and, *secondly*, that under a recent ruling by the Accountant-General they are only entitled to the reduced rate even when employed in temporary or officiating charges. The Governor-General in Council concurs generally in the views expressed by the Bengal Government on these points, and is prepared to modify the rules so as to give effect to His Honour's suggestions. The rules as modified will be as follows:—

(1) All supernumerary Assistant Surgeons will draw Rs. 50 during the time for which they have no temporary or permanent charge and are merely attached to hospitals or on similar duty. This rate of pay to be called "unemployed pay."

(2) All supernumerary Assistant Surgeons will receive Rs. 100 while holding temporary or officiating charges. This rate of pay to be called "employed pay" and to cease when the temporary or officiating duty ceases. The supernumerary will then revert to unemployed pay. Should the post of which a supernumerary is in charge carry local allowances, he will be entitled to receive them in addition to the Rs. 100 a month, and the allowance to a supernumerary in charge of a civil station will, under Article 157 (ii) of the Civil Service Regulations, be Rs. 100 in addition to employed pay.

(3) All Assistant Surgeons holding permanent appointments will draw, in addition to their grade pay, any local and other allowances attached to those appointments.

(4) An Assistant Surgeon who is transferred, otherwise than for misconduct, from another Province in which he was holding a permanent appointment, will draw full grade pay until provided with a permanent post, and will be absorbed in the first vacancy that occurs after his transfer. If transferred for misconduct, he will receive the reduced pay of his grade. If transferred while a supernumerary, his pay will be regulated by Rule (1) or (2) according as he holds a temporary or permanent charge or not.

(5) An Assistant Surgeon on the permanent list who has misconducted himself will draw the reduced pay of his grade, Rs. 50, Rs. 100, or Rs. 150, whether employed or not.

(6) An Assistant Surgeon with a permanent appointment who loses that appointment, otherwise than as a penalty for misconduct, *e.g.*, by its being abolished, will receive his full grade pay till he can be provided with a permanent post, and will be absorbed in the first permanent vacancy which occurs after he loses his appointment.

With reference to Rule (5) I am to observe that an Assistant Surgeon who has been reduced should usually be employed instead of being allowed to remain in a hospital as a supernumerary. If his misconduct has been of such a nature as to render his employment undesirable, except as a supernumerary, he should be dismissed.

4. The rules enumerated above assume that it will never be necessary, as has sometimes happened in Bengal, to keep an Assistant Surgeon as a supernumerary for as long as seven years, and, as the Government of India consider that it is an essential condition of a properly recruited service that an Assistant Surgeon who is duly qualified should be provided with a permanent appointment before he has completed seven years' service, I am to request that, with the permission of His Honour the Lieutenant-Governor, a scale of annual recruitment for Assistant Surgeons, which will secure this result, may be fixed and strictly adhered to. I am further, with reference to the orders contained in your Medical letter No. 882, dated 25th April last, to the address of the Inspector-General of Civil Hospitals in Bengal, to say that, as it is very desirable that none but properly qualified men should be retained as Assistant Surgeons, the Governor-General in Council considers that the rules relating to septennial examinations should be rigidly enforced.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 3rd October, 1891.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.		***Western Districts.***		
BURDWAN DIVN.	1	Burdwan Oct. 3, '91 Culna ... Cutwa ... Raneegunge ...	0·32 1·69 0·92 Nil	Weather—hot. Prospects of *aman* and sugarcane fair. Rain very much wanted. A few cases of cattle-pox. Supply of fodder and water sufficient. Prices of common rice :— Srs. Burdwan ... ... 16 Culna ... ... 14 Cutwa ... ... 15⅓ Raneegunge ... . 16 per rupee.
	2	Baukoora „ 3, '91	0·92	Weather—hot and occasionally cloudy. Harvesting of *aus* going on. Rain wanted for *aman* crop on high lands. Condition of cattle good, and supply of fodder and water sufficient. Rice selling at 18 seers per rupee at Sudder and 17½ seers at Bishenpur.
	3	Birbhum „ 3, '91 Rampore Haut ...	1·56 1·24	Frequent and heavy showers of rain general all over the district. Low land crops are everywhere excellent. High land crops are in fair condition, though still backward. Fodder and water plentiful. Prices of rice 16 to 17 seers per rupee.
	4	Midnapur „ 3, '91	0·23	Very little rain except in Tumluk. *Aus* paddy is being reaped. *Aman* paddy, sesame, and sugarcane doing well. Cattle-disease in Keshpur, Garbeta, Chandrakona, and Ramnagar thanas. Prices of common rice :— Srs. Sudder ... ... 16 Contai ... ... 20 Tamluk ... ... 16 Ghatal ... ... 16 per rupee.
	5	Hooghly „ 3, '91 Serampore ... Jehanabad ...	0·62 1·87 3·00	Weather—sultry. *Aus* still being harvested; outturn expected to be fair. Prospects of winter rice favourable. Supply of fodder and water for cattle sufficient. No cattle-disease reported. Prices of common rice :— Srs. Sudder ... ... 13 Serampore ... ... 13 Jehanabad ... ... 16 per rupee.
	6	Howrah „ 3, '91 Uluberia ...	1·12 2·65	Weather—showery in earlier part of week. Outturn of *aus* and jute fair. Prospect of *aman* satisfactory. Price of common rice 14 seers per rupee. Cattle are healthy. Fodder and water-supply sufficient.
		Central Districts.		
PRESIDENCY DIVN.	7	24-Perghs. Oct. 6, '91	0·52	Weather—bright and warm. Harvesting of *aus* nearly finished. Steeping of jute still continues. *Aman* promising but wants rain on high lands. Sugarcane doing well. Prospects good. Cattle-disease reported from thanas Baduria and Harowa. No deficiency of fodder or want of water reported. Prices stationary.
	8	Nuddea „ 3, '91 Kushtea ... Meherpur ... Chuadanga ... Ranaghat ...	0·09 0·64 0·18 2·10 0·86	Weather—seasonable. Prospects of *aman* not good owing to want of rain. Sowing of cold-weather crops commenced. Condition of cattle good, and supply of fodder and water sufficient.
	9	Khoolna „ 3, '91 Bagirhat ... Satkhira ...	0·67 1·34 1·04	Weather—fine with occasional showers. Cutting of jute and *aus* nearly complete; estimated outturn of jute about 16 annas and of *aus* about 12 annas. Prospects of *aman* fair. Fodder and water sufficient.
	10	Jessore „ 3, '91 Jhenidah ... Magura ... Narail ... Bongong ...	0·57 1·94 1·55 0·81 1·27	Weather—hot. More rain wanted for *aman*. Prospects of all other standing crops good. No cattle-disease except in Magura. Supply of fodder and water sufficient. Price of rice steady. Jute-steeping still going on in Narail. Rivers going down in Magura and Narail.
	11	Murshedabad „ 5, '91	0·29	Weather—seasonable. Recent rain has done good to *aman* crop. Sowing of *kalai* and *til* going on. Jute and sugarcane doing well. Prospects good. Sufficient supply of fodder.
RAJSHAHYE DIVN.	12	Dinagepur „ 3, '91 Thakurgaon ...	0·48 0·22	Weather—cloudy; slight rain at times. Outturn of sugarcane expected to be 10 annas. More rain urgently wanted for winter rice. Cultivation of *rabi* commenced in some places. *Haimanti* rice selling at 13 seers and *bhadoi* rice 14 seers per rupee at Sudder. Condition of cattle good. Supply of fodder and drinking water sufficient.
	13	Rajshahye „ 3, '91 Nattore .. Nowgong ...	Nil 1·16 0·13	Weather—cloudy and comparatively cool; but no rain falls. Heavy rain wanted everywhere; but all parts of the district are not suffering in an equal degree; Nattore subdivision is best, Sudder subdivision worst. People in places are allowing cattle to graze in their fields, all hopes of sowing the crops having been abandoned. Water insufficient for steeping jute. Fodder and drinking water ample. No cattle-disease.
	14	Rungpur „ 3, '91	5·85	Weather—raining and overcast. Heavy rain fell last night (2nd) at head-quarters and is continuing. If general, it will greatly improve prospects of crops which are otherwise unfavourable. Prices rising slightly. Jute-steeping delayed for want of rain. Fodder plentiful.

Division	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*					
		Central Districts—concld.			
RAJSHAHYE DIVN.—*concld.*	15	Bogra	Oct. 3, '91	0·58	Weather—generally fine and hot till the afternoon of Saturday (3rd), when heavy rain has begun to fall. Only about three-quarters of the usual area has been transplanted with *aman*, and a little more can now be transplanted. None of the crops already transplanted are believed to have withered, but their growth has been slow. The rain now falling will do very great good, but more will be needed during the next few weeks. Sugarcane is doing very fairly. Ploughing is going on vigorously for cold-weather crops, of which the area will probably be considerably larger than usual. Common rice is still, as before, selling at 15 seers per rupee. There is plenty of fodder and water, and the cattle are in excellent condition.
		Sherpur	...	0·51	
		Nowkhilla	...	0·50	
	16	Pubna	„ 3, '91	0·85	Weather—hot. Jute is still being cut. Prospects of *aman* paddy unfavourable. Land is being prepared for *rabi* crops. Price of rice has risen in Serajgunge, stationary in Pubna. Fodder sufficient. No cattle-disease.
	17	Darjeeling	„ 3, '91	1·37	Weather—fair. Recent rain has been of much use in Terai. No disease among cattle. Fodder and water-supply sufficient.
	18	Julpigoree	„ 3, '91	2·21	Weather—hot; cloudy at intervals. Prospects of standing crops not fair. Rain wanted for winter rice. Cattle-disease reported from Patgram. Supply of fodder and water sufficient. Price of rice rising.
		Eastern Districts.			
DACCA DIVN.	19	Dacca	Oct. 3, '91	0·26	Weather—seasonable. Harvesting of *aus* completed. Cutting of jute continues. Prospect of *aman* fair. Condition of cattle good. Supply of fodder sufficient. Common rice sold at from 15 to 17 seers per rupee.
	20	Furreedpur	„ 3, '91	0·12	Weather—seasonable. Prospect of standing crops good, excepting that of high land paddy which has withered. Price of rice stationary.
	21	Backergunge	„ 3, '91	0·97	Weather—seasonable. Prospects of crops not bad. Outturn of *aus* crop not less than 12 annas. Price of common rice varies from 13 to 18 seers per rupee. Supply of fodder and water sufficient.
	22	Mymensingh	„ 3, '91	0·34	Weather—hot and cloudy. Rivers have fallen much. Prospects of standing crops unfavourable in some parts, but favourable in others. Supply of fodder and water abundant. Condition of cattle good. Common rice sells at 13½ seers per rupee.
CHITTAGONG DIVN.	23	Chittagong	„ 6, '91	1·63	Weather—seasonable. A little more rain would do good to *aman crop*. *Aus* still being harvested. Prices have risen slightly.
	24	Noakhally	„ 3, '91	0·32	Weather—hot, with rain only on one day both at Sudder and Feni. *Aman* is still being transplanted as a result of some rain last week More rain much wanted. Prospects unfavourable. Price of rice has risen. Condition of cattle and supply of fodder satisfactory.
	25	Tipperah	„ 3, '91	0·26	Weather—hot, cloudy. Rain wanted for crops on high land. Price of rice stationary. Jute market brisk, rates high.
	26	Chittagong Hill Tracts.	„ 1, '91	0·64	Weather—very hot with foggy mornings. Harvesting of *jum* paddy continues. Cotton plants in flower. Late rice in low lands progressing. Lands are being ploughed for mustard and other cold-weather crops. Common rice being sold at 12 seers 12½ chittacks per rupee.
BEHAR.					
PATNA DIVN.	27	Patna	„ 3, '91	0·25	Weather—clear but cloudy at times; now raining hard. *Bhadoi* being harvested Prospects of paddy improved by recent rain. Lands being prepared for *rabi* sowings. Prices generally stationary.
		Barh	...	0·95	
		Behar	...	0·88	
		Dinapore	...	0·25	
	28	Gya	„ 3, '91	1·90	Weather—hot and cloudy. Harvesting of *bhadoi* crops finished. Prospect of paddy not favourable; more rain wanted. Prices of food-grains almost stationary. Supply of fodder and water for cattle sufficient.
		Jehanabad	...	0·28	
		Nawada	...	0·18	
		Aurungabad	...	Nil	
	29	Shahabad	„ 3, '91	2·31	Weather—hot in the beginning of week; now getting cool, and sky cloudy. Transplantation of paddy over. *Bhadoi* crops harvested. In Bhabuah *bhadoi* harvest about to be finished. A good shower of rain yesterday (2nd) at Arrah, 1·29; news from subdivisions not yet reached. Yesterday's rain has done immense good to paddy as well as to *rabi*. More rain still wanted. Prospects of crops generally good. Fodder sufficient. Prices stationary.
		Buxar	...	0·13	
		Sasseram	...	0·16	
		Bhabuah	...	0·08	
	30	Durbhunga	„ 3, '91	1·42	Weather—cloudy with east winds. Reports of the rice crop from Samastipur and Sudder are fairly good; but in Madhubani it is withering on high lands, and rainfall is quite insufficient. Rice sells at 15 seers a rupee in most thanas. *Bhadoi* harvest nearly over. Cattle in good condition. Fodder and water plentiful.
		Somastipur	...	1·17	
		Madhubani	...	0·38	

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR—*concld.*				
PATNA DIVN—*concld.*		Mozufferpur Oct. 3, '91 Hajipur ... Sitamarhi ...	0·49 0·70 0·03 (A good fall of about one inch at 4 P. M. of 1st instant.)	Weather—cloudy and showery during greater part of week. Rain has fallen more or less generally throughout the district. Prospects of rice considerably improved, but more rain still wanted. Lands are being prepared for *rabi* in the southern portion of the Sudder subdivision. Prices stationary. Cattle in good condition. Fodder and water abundant.
	32	Sarun „ 3, '91	0·29	Weather—cloudy, cooler, and light rain. *Bhadoi* crops nearly harvested; outturn good, especially in Gopalgunge subdivision. Rice crop improving under light rain, but a heavy fall is much wanted.
	33	Chumparun „ 3, '91 Bettiah ...	4·12 3·00	Weather—cloudy and raining. Rainfall of the week has done immense good to *aghani* rice. *Bhadoi* crops still being harvested in a few places. Fodder and water for cattle sufficient.
BHAGULPORE DIVN.	34	Monghyr „ 3, '91 Jamui ..	2·5 0·12	Weather—very hot and rainless up to Friday (2nd); now cloudy. Westerly winds. Heavy rainfall of Friday night appears to have been local only as it did not reach Begusarai or Jamui except in insignificant amount. To the north of the district, where rain was specially needed, there has only been a drizzle. Condition of rice crop extremely critical, and even if heavy rain falls now the yield will be a very short one. Twelve annas of the crop reported to be already lost in the Sudder and Jamalpur thanas, and eight annas in Surajgudha, Luckhisarai, Gogri, Buckhtearpur, and Khagaria. Common rice selling at 12½ seers per rupee. Condition of cattle and supply of water and fodder good.
	35	Bhagulpore „ 3, '91	0·04	Weather—hot and sultry. Prospects are fair in the south, but more rain is wanted everywhere. In the north, unless there is rain soon, there is danger of scarcity.
	36	Purneah „ 3, '91 Kishengunge ... Arrareah ...	0·73 3·19 1·67	Weather—cooler; a heavy shower on Friday (2nd). Prospects in Arrareah still reported to be improving and prices there keep low. In head-quarters no decided change for the better. With a sufficient rainfall an average outturn of 11 annas for the whole district may be expected. Kishengunge has had a heavy fall of rain, and the position there is also greatly improved. Land is generally being prepared for *rabi*. Fodder abundant.
	37	Maldah „ 3, '91 Chanchal ... Shibgunge ... Gajole ...	0·79 0·15 0·45 1·80	Weather - hot. Slight showers on two days during the week. More rain wanted for winter rice. Unless it rains heavily, the plants will yield an indifferent crop. *Kalai* sowing and jute-steeping continue. Lands are being prepared for mulberry. Cattle-disease reported from thana Ratua and outpost Tulsihatta. Fodder and water sufficient. Common rice selling at an average of 14½ seers per rupee.
	38	Sonthal Perghs. „ 3, '91	0·75	Weather—very hot in the day. Occasional slight showers. Indian-corn gathered; outturn from 12 to 16 annas. Rice crop so far good, but more rain wanted, especially in Godda and Deoghur. Fodder and water-supply good except in above-mentioned subdivisions.
ORISSA.				
ORISSA DIVN.	39	Cuttack „ 3, '91	0·29	Weather—fair. *Beali* harvested. Transplantation of *sarad* nearly completed. *Sarad* crop on low lands having been submerged by flood-water, some damage is said to have been done everywhere in the district, but the extent of damage not yet fully ascertained. Cattle-disease prevalent in the Kendrapara and Sudder subdivisions. Rivers falling.
	40	Pooree „ 1, '91 Gopo ... Khoorda ... Banpur ..	2·8 1·96 2·10 0·92	Weather—seasonable. Weeding of winter rice (*sarad*) going on. Harvesting of early rice still continues with an average outturn of 10 annas. Miscellaneous crops doing well. Price of common rice stationary. Cattle-disease reported from Khoorda and Banpur thanas.
	41	Balasore „ 3, '91	1·40	Weather—seasonable. *Beali* harvest over. Prospects of winter rice, sugarcane, and miscellaneous crops good.
CHOTA NAGPORE				
South-West Frontier Agency.				
CHOTA NAGPORE DIVN.	42	Hazaribagh Oct. 3, '91 Giridih ..	0·34 0·49	Weather—cool; fine days with occasional showers. *Bhadoi* harvest almost over with 16 annas outturn. Rice prospects good. Cultivation for *rabi* going on.
	43	Lohardugga „ 3, '91 Palamow (up to 28th Sept.)	0·97 2·49	Weather—cloudy. Harvesting of *gora* rice continues. Prospect of winter rice favourable. Fodder and water plentiful.
	44	Singbhoom Oct. 3, '91	1·66	Weather—seasonable. Alternate showers and sunshine. Prospects of crops all that can be desired. *Gora dhan*, Indian-corn, and *kheri* are being harvested; 16 annas outturn expected. No cattle-disease. Fodder plentiful. Common rice sold at 16 seers per rupee both at Chyebassa and in the Kolhan.
	45	Manbhoom „ 3, '91 Govindpur ...	Nil 1·15	Weather—seasonable. State and prospects of crops satisfactory. Rice selling at from 14 to 18 seers per rupee. Fodder and water-supply sufficient.

Published for general information.

The total fall from 1st January to 3rd October 1891 ...	46·32
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	59·46

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formulæ.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

d, drizzling rain ; p, passing temporary showers ; △, dew ; lr, lightning reflection.

C. LITTLE,

For Meteorological Reporter to the Govt. of India.

* Mean of 6 days. —† Mean of 4 days. —‡ Mean of 5 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 3rd of October 1891.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Rainfall. Of week. Mean for district.	Of week. Normal mean.	Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 16th May 1891. Mean for district.	Since 16th May 1891. Normal mean.	Since 16th May 1891. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—..... indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 6th October* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING SATURDAY, THE 3RD OF OCTOBER 1891.

THOUGH there has been very little to note in the weather conditions during the week under review, the influence of the depression which passed from the northern half of the Bay into Central India in the previous week has been distinct, especially in the western half of the province. The depression remained almost stationary in the early part of the week and then took a north-easterly direction towards Allahabad, where it ultimately filled up. Rainfall was fairly general on the 27th September, the first day of the present week, and the wind circulation was evidently controlled by the low-pressure area; directions being south at all stations except in the west of Behar, where they were east or south-east. Pressure differed very little from the normal, there being a small excess in Lower Bengal and a defect of not more than a twentieth of an inch in the northern districts, while temperature was, in consequence of the continued and almost general rainfall, several degrees below the normal. After this for four days rainfall practically ceased except in parts of North Bengal, where local showers continued, pressure underwent slight oscillations, temperature, though changing somewhat irregularly, was gradually becoming normal, and the wind circulation was unchanged till Wednesday, the 30th September. On that day, apparently owing to the filling up of the depression, wind directions became south-west at all except the Behar stations, where the circulation, though still easterly, was light and more irregular. On the 1st October the general distribution of pressure was unchanged, except that readings were everywhere higher by about a twentieth of an inch; temperature was everywhere above the normal by about 2° and was rising, especially in Behar and Chutia Nagpur, where the rise was between one and two degrees at nearly all stations. Wind directions were south or south-west, and practically no rain fell; but on the 2nd, though pressure rose briskly in North Bengal and Behar and moderately elsewhere, north-easterly winds were blowing in Behar, and the westerly element in the directions at the southern stations was not so decided. Other signs of slightly unsettled conditions were apparent in commencement of rainfall in the extreme west of Behar, and on the following day local showers were fairly general in Behar and North Bengal, while there was a general slow fall of pressure and temperature over the whole province. These changes probably resulted from the filling up of the depression in North-Western Provinces, but the rising pressure and easterly winds in Behar and North Bengal show that nothing of the nature of a residual depression passed over the province.

Pressure changes have been very small throughout the week, the only rise of more than a twentieth of an inch occurring on the 2nd October in the northern half of the province. The general tendency has been upwards, and from being below the normal in Behar by about ·03" and above elsewhere by a similar small amount, readings at the end of the week were everywhere in excess by somewhat variable amounts ranging up to nearly a tenth of an inch at some of the southern stations. As excess in Behar and North Bengal was less than in Lower Bengal by about a twentieth of an inch, gradients were steeper than is usual at this season of the year. The means for the week are normal or slightly below in Behar and Chutia Nagpur, and above the normal in the other districts, especially in East Bengal and Orissa, where excess is more than a twentieth of an inch.

Temperature was considerably below the normal in Orissa, South-West Bengal, Chutia Nagpur, and part of South Behar at the beginning of the week, and above the normal in Behar and North Bengal by variable amounts ranging up to 2°. After rainfall ceased there was an almost general rise, the exceptions being in North Bengal, where local showers continued. Though changes were not quite regular, readings steadily increased till 2nd October, when there was excess of between one and two degrees at nearly all stations On the 3rd, however, a rapid fall occurred in Behar and North Bengal and slower downward changes in the other districts. The fall at Motihari, Durbhunga, Dinagepore, Rungpore, and Dhubri was 5°, but in the southern districts changes exceeded 1° at a few stations only. The means for the week are nearly 1° below the normal for Orissa, Chutia Nagpur, and Assam, above by rather more than ·5° for East and North Bengal, and very nearly normal for the other districts.

Rainfall was almost general on the 27th September, scattered on the following day, and practically absent in all districts for the next three days except in North Bengal, where local showers were fairly numerous throughout the week. On the 2nd October almost general rain fell in North Behar and North Bengal, and on the 3rd it continued in North Bengal and almost the whole of Behar, but during these days the falls in the southern districts were very scattered. Amounts varied exceedingly, Gajol in the Maldah district receiving 7 inches on the 3rd, Rungpore 5·25 inches, Ulipore 4·6 inches, and Kurigram 4 inches; while very few other stations received more than 1 inch on either the 2nd or the 3rd, the irregularity in the rainfall being due to the fact that it was caused by local thunderstorms.

The average fall is above the normal in North Behar and North Bengal: in the former by ·48" and in the latter by ·19", while in the other districts defect is large as compared with the normal average. Taking the actual average as a percentage of the normal average, the numbers for the various districts where rainfall has been deficient are as follows:—South Behar 71, Chutia Nagpur 60, South-West Bengal 56, Orissa 42, and East Bengal 21.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 3rd of October 1891 :—

Meteorological Divisions.	Temperature.						Rainfall.

For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA,
The 5th October 1891.

MEMORANDUM.

Report on the Monthly Statistics of Deaths registered in forty-five districts of Bengal for the month of July 1891.

THE total number of deaths registered in forty-five districts of Bengal during the month of July 1891 amounted to 121,977, against 115,581 in July 1890, and an average of 119,209 in the corresponding month of the previous five years, 1886—90. These figures represent an annual death-rate of 22·20, 21·00, and 21·72 per 1,000, respectively, of the aggregate population of those districts, which is 65,859,534. The death-rate of July 1891 is ·48 higher than the mean rate of the corresponding month of the past five years, 1886—90, and is also higher than the rate of the corresponding period of any of the past five years except 1887 and 1889, *vide* the figures below:—

	July 1886.	July 1887.	July 1888.	July 1889.	July 1890.	Monthly average of five years, 1886-90.	July 1891.
Number of deaths	92,756	13[illegible],434	113,220	138,050	115,580	119,209	121,977
Ratio per mille per annum	16·80	24·84	20·52	25·08	21·00	21·72	22·20

It will also be seen from the following table that the mortality of the forty-five districts during July 1891 is less than that of the previous months of the year:—

Months.	*Number of deaths.*	*Ratio per mille.*
January 1891	143,492	26·04
February „	137,553	24·96
March „	168,185	30·60
April „	161,980	29·52
May „	125,975	22·92
June „	140,594	25·56
July „	121,977	22·20

The following table shows the number and ratio of deaths during the month according to Sex and Class. As usual, more males died than females. The ratio of deaths among the sexes, calculated on the proportion the mortality bears to the total male and female population of the province, is as 118 is to 100; but, individually considered, in only three districts, viz., Khulna, Darjeeling, and Noakhali, the death-rates among females is greater than that among males. In proportion to the population of the several classes of the community, death is greatest among the Budhists, next among the Hindus, then among the other classes and Christains. The Mahomedans suffered the least:—

	Sex.			Class.				
	Males.	Females.	Ratio of male deaths to every 100 female deaths, calculated on the proportion such mortality bears to the total male and female population.	Christians.	Hindus.	Mahomedans.	Buddhists.	Other classes.
Number of deaths	65,722	56,255	...	142	88,283	30,367	165	3,020
Ratio per mille per annum ..	24·12	20·28	118	17·52	24·72	17·04	24·94	21·72

The following table shows the proportions of deaths registered during the month of July 1891, which are above 25 per mille and are arranged in order of sequence, and are compared with the ratios of the corresponding month of 1890:—

Districts.	Ratio per *mille* during— July 1891.	July 1890.	*Districts.*	Ratio per *mille* during— July 1891.	July 1890.
Darjiling	65·52	48·36	Sarun	29·76	20·52
Shahabad	60·84	21·60	Durbhanga	28·92	16·56
Gya	48·12	25·92	Lohardugga	28·68	17·16
Patna	42·36	33·72	Mozufferpore	27·00	21·00
Monghyr	34·68	21·36	Bhagulpore	26·16	19·56
Julpaiguri	30·48	32·88	Hazaribagh	25·44	19·32

It will be seen from the statement appended to this memorandum that the highest death-rate occurred in Darjiling, 65·52 per mille per annum, and the lowest in Dacca and Faridpore, 11·28 each per 1,000 of population. In twelve districts the death-rates were above 25 per mille, in six between 20 and 25, and in the remaining 27 below 20. In the districts which show a lower death-rate than 20 per mille per annum, the registration of deaths cannot be considered to have been correct.

The total mortality during the month under review from the several registered death-causes is compared in the following table with the mortality from those causes in the corresponding month of 1890, and the average of the five years 1886—90:—

	Ratio per *mille* during—		
	July 1891.	July 1890.	Monthly average of five years, 1886–90.
Cholera	3·60	1·68	2·64
Small-pox	·24	·12	·09
Fever	14·16	14·76	14·40
Dysentery and diarrhœa	·48	·60	·72
Injury	·60	·72	·72
Other causes	2·76	2·84	3·00

Compared with the figures of both the past periods, there is a considerable increase in the mortality in the month under review, under the head cholera.

Cholera caused 20,049 deaths, which is equivalent to an annual rate of 3 60 per 1,000 of population per annum, against 18,303 (ratio 3·24 per mille) in the preceding month. Shahabad suffered the most with the highest cholera death-rate of 33·74 per mille per annum, next Gya 20·52, then Patna 10·68, Durbhanga 8·76, Sarun and Monghyr 8 16 each, Lohardugga 5·16, and Darjiling and Mozufferpore 4·92 each, Bhagulpore 4·20, Hazaribagh 3·36, Maldah 2·52, and Julpaiguri 2·04. In only one district, Tipperah, the disease was conspicuous by its absence.

The deaths from *Small-pox* numbered 1,335 (ratio ·24 per mille), against 1,826 (ratio ·24) in the preceding month. Midnapore returned the highest death-rate, 1·56 per mille, followed by Lohardugga 1·20 per mille. There were no deaths recorded in eleven of the districts, viz., Birbhum, Serampore, Dinajpur, Rajshahye, Rungpore, Pubna, Julpaiguri, Backerganj, Noakhali, Tipperah, and Manbhum.

Fever proved fatal in 77,775 instances and *dysentery and diarrhœa* in 3,272 (ratio 14·16 and ·48 per mille) respectively, against 94,634 and 3,332 (ratio 17·16 and ·60), respectively, during June last. All the districts returned deaths under both these heads; but the highest fever death-rate occurred in Darjiling, viz., 31·20 per mille per annum, next in Julpaiguri 27·00, then in Shahabad 23 28, in Gya 21·96, in Monghyr 21·72, and in Patna 21·48. Darjiling also returned the highest death-rate from dysentery and diarrhœa, viz., 23·04 per mille, Balasore stands next to Darjiling with a death-rate of 2·76 per mille, followed by Howrah and Pooree 2·40 each.

Injury caused 3,945 deaths (ratio ·60 per mille), against 4,083 (ratio ·72) in the previous month, and the mortality from *all other causes* not specified amounted to 15,601 (ratio 2·76 per mille), against 18,413 (ratio 3·24) in the previous month. Poori returned the highest death-rate from the unspecified diseases coming under the head "All other causes," viz., 11·64 per mille per annum.

With regard to mortality according to *Age*, infants under one year of age, as usual, perished in the largest numbers, viz., at the rate of 154·20 per 1,000 of population per annum, next came old persons (60 years and upwards) with a death-rate of 47·52 per mille. The lowest death-rate occurred among persons between 10 and 15 years of age, viz., 11·40 per 1,000 per annum.

Detailed information regarding the mortuary statistics of the forty-five districts of Bengal during the month under review will be found in the statement appended.

OFFICE OF SANITARY COMMISSIONER FOR BENGAL,

The 3rd October 1891.

W. H. GREGG, *Dip. Publ. Health, Camb.*,

Sanitary Commissioner for Bengal.

MEMORANDUM.

Report on the Vital Statistics in twenty-seven of the principal towns of Bengal for the Quarter ending 30th June 1891.

BIRTHS.

THE total number of births registered in twenty-seven of the principal towns of Bengal during the three months ending with 30th June 1891 amounted to 5,182, being less than that of the preceding quarter by 1,230, but greater than that of the correspondng quarter of the preceding year and the average of the corresponding period of the past five years, (1886—90) by 1,168 and 615 respectively. This corresponds to an annual rate of 19·32 per 1,000 of the aggregate population of those towns, which is 1,072,359. This rate is 2·32 higher than the mean rate of the corresponding quarter of the past five years, 1886—90, and is also higher than the rate of the corresponding period of any of the past five years with which comparison is instituted, *vide* the figures below—

	QUARTER ENDING 30TH JUNE OF—						
	1886.	1887.	1888.	1889.	1890.	Quarterly average of five years, 1886—90.	1891.
Number of births	4,558	4,518	4,7?6	4,988	4,014	4,567	5,192
Ratio of births per mille per annum	17·00	16·84	17·72	18·60	14·96	17·00	19·32

Of the total births, 2,765 (ratio 10 28 per mille) were boys and 2,417 (ratio 9·) girls, or relatively to each other, 114 of the former were born for every 100 of the latter. Although, on the whole, there was a preponderance of the male element, yet in five towns, viz., Ranaghat, Jessore, Rampore Beauleah, Comillah, and Gya, more girls were born than boys.

The births registered in each of the twenty-seven principal towns during the second quarter of 1891, 1890, and the average of the five years, 1886—90, correspond to the following rates per 1,000 of the population of those towns :—

TOWNS.	RATIO PER MILLE. Quarter ending 30th June of— 1891.	1890.	Average of five years, 1886—90.	TOWNS.	RATIO PER MILLE. Quarter ending 30th June of— 1891.	1890.	Average of five years, 1886—90.

Hughli and Chinsurah	21·32	24·72	22·56	Comillah	23·34	28 12	29·00
Serampore	23·36	21·36	22·32	Patna City	10·68	7·80	11·48
Utterpara	19·60	12·32	15·24	Gya	21·32	17·36	19·36
Howrah	18·40	16·16	17·64	Arrah	21·80	13·52	14·32
Bali	14·00	11·32	13·48	Mozufferpore	25·72	12·72	15·44
Krishnagar	15·28	14·52	15·84	Durbhanga	25·.2	21·12	26·44
Ranaghat	13·32	14·28	6·88	Chupra	17·16	9 56	10·44
Santipore	12·12	13·32	10·24	Bhaugulpore	22·36	16·60	20·92
Jessore	6·12	8·00	8·00	Monghyr	32·44	19·80	21·44
Rampore Beauleah	28·48	28·28	30·72	Purneah	11·72	16·76	13·28
Darjiling	28·48	16·52	17·64	Poori	20·16	17·08	14·84
Dacca	15·24	11·56	13·72				
				TOTAL ...	19·32	15·12	17·00

The total birth-rate of the twenty-seven principal towns during the second quarter of 1891 is higher than the total rates of the two past periods with which it is compared. The maximum birth-rate was recorded in Monghyr (32·44 per mille) and the minimum in Jessore (6·12). The supposed standard in India is 40 per thousand, but it will be seen that not in one of the twenty-seven principal towns of Bengal was this standard reached during the quarter under review. In only one, however, out of the twenty-seven principal towns in Bengal, viz., Monghyr, did the statistics of birth registration exceed 30 per 1,000. In all the rest the rate was very low, especially in the towns of Jessore, Patna, Purneah, Santipore, Ranaghat, and Bali, where the statistics are so imperfectly recorded that ratio was less than 15 per 1,000.

DEATHS.

The total number of deaths registered in twenty-seven principal towns of Bengal during the quarter ending with 30th June 1891 amounted to 6,342, against 6,765 in the corresponding quarter of 1890, and 6,018 which is the average of the corresponding period of the past five years (1886—90). These figures represent an annual death-rate of 23·64, 25·20, and 22·44 per 1,000, respectively, of the aggregate population of those towns. The death-rate of the second quarter of 1891 is 1·20 higher than the mean rate of the corresponding

period of the past five years 1886—90, and is also higher than the recorded mortality of the corresponding quarter of any of the past five years except 1890, *vide* the figures below—

	QUARTER ENDING 30TH JUNE OF—						
	1886.	1887.	1888.	1889.	1890.	Quarterly average of five years, 1886–90.	1891.
Number of deaths	5,972	5,093	5,718	5,979	6,765	6,018	6,342
Ratio per mille per annum	22·24	21·12	21·28	22·28	25·20	22·44	23·64

The deaths registered among the different sexes and the several classes of the community are given in the following statement. Taking the towns collectively, there were more male deaths registered than female deaths, *i.e.*, 105 males died for every 100 females, calculated on the proportion such mortality bears to the total male and female population; but, individually considered, in thirteen towns the death-rate was greater among the female than among the male population. Proportionally to population, the death-rate among the Hindus was the greatest, and that among the Mahomedans was greater than the death-rate among either the Christians or the Budhists who suffered the least:—

	SEX.			CLASS.				
	Male.	Female.	Ratio of male deaths to every 100 female deaths calculated on the proportion such mortality bears to the total male and female population.	Christians.	Hindus.	Mahomedans.	Budhists.	Other classes.
Number of deaths	3,371	2,971	....	37	4,594	1,710	1	...
Ratio per mille per annum	24·24	23·00	105	21·21	23·96	23·08	1·96	...

The deaths registered in each of the twenty-seven principal towns during the second quarter of 1891, 1890, and the average of the five years 1886—90, correspond to the following rates per 1,000 of the population of those towns:—

TOWNS.	RATIO PER MILLE. Quarter ending 30th June of— 1891.	1890.	Average of five years 1886—90.	TOWNS.	RATIO PER MILLE. Quarter ending 30th June of— 1891.	1890.	Average of five years 1886—90.

Rampore Beauleah	26 64	28·08	33 16	Purneah	27·98	22 64	22·64
Darjiling	37·60	55·84	32·48	Poori	25·00	101·32	60·00
Dacca	20·28	23·04	18·56				
				TOTAL ...	23·64	25·20	22·44

Gya attained the highest death-rate during the quarter under notice, viz., 42·1 per 2 mille per annum, and the lowest death-rate was recorded in Krishnagar, 6·68. In seven towns the rates were above 30 per mille, in ten they were between 30 and 20, and in the remaining ten they were below 20. In those towns which returned death-rates below 20 per mille, registration of deaths cannot be said to have been satisfactorily carried on.

The total mortality during the quarter under review from the several registered death-causes is compared in the following table with the mortality from those causes in the corresponding quarters of 1890 and the average of the five years 1886—90:—

	RATIO PER MILLE DURING—		
	Quarter ending 30th June 1891.	Quarter ending 30th June 1890.	Quarterly average of quarter ending 30th June 1886–90.
Cholera	3·56	4·44	3 80
Small-pox	1·20	·84	·40
Fever	9·24	11·64	8·96
Dysentery and diarrhœa	2·36	2·16	2·64
Injury	·48	·40	·48
Other causes ...	6·68	5·60	6 12

It will be seen from the above statement that the figures of 1891 are almost similar to those of the average period of the past five years, except under the heading small-pox. Compared, however, with the second quarter of 1890, there is a considerable decrease in the

mortality of the second quarter of 1891 under the heads "cholera" and "fever," and a noticeable increase in the mortality from the unspecified diseases coming under the head "Other causes."

Cholera caused 956 deaths, against 1,164 in the preceding quarter—ratio 3·56 and 4·32 per 1,000 of population, respectively. Proportionally to population, the disease was most severe in Purneah and Bhagulpore, where the mortality rates were 14·88 and 11·16 per mille per annum, respectively. The next highest rate occurred in Chittagong, 5·96, then in Gya, 5·88, in Dacca 5·20, in Utterpara 4·32, in Comillah 4·12, in Howrah 3·80. in Serampore and Chupra 3·32 each, in Patna 3·28, in Hughli and Chinsurah 3·12. in Rampore Beauleah 3; and in Santipore 2·40. In only one town, viz., Darjiling, the disease was entirely absent.

The deaths from *Small-pox* numbered 324 (ratio 1·20 per mille), against 478 (ratio 1·76) in the previous quarter. Midnapore returned the highest death-rate, viz., 13·08 per mille per annum, next Chittagong 6·68 per mille, followed by Gya 2·64, Durbhanga 2·16, Chupra 1·52, and Arrah 1·28. Thirteen towns, viz., Serampore, Utterpara, Bali, Krishnagar, Ranaghat, Santipore, Jessore, Rampore Beauleah, Darjiling, Dacca, Comillah, Bhagulpore, and Poori, enjoyed perfect immunity from this disease

Fever proved fatal in 2,486 instances (ratio 9·24 per mille), and *dysentery and diarrhœa* in 643 (ratio 2·36), against 2,793 (ratio 10·40) and 794 (ratio 2·96), respectively, in the preceding quarter. All the towns suffered from fever; those which suffered the greatest being Darjiling with a death-rate of 23·36 and Gya with 20·96 per mille. Darjiling also returned the highest death-rate from dysentery and diarrhœa, viz., 13·08 per mille; next to it comes Serampore 7·24, then Monghyr 5·76. In only one town, Comillah, the return of deaths from dysentery and diarrhœa was *nil*.

The deaths from *Injury* numbered 139 (ratio ·48 per mille), against 108 (ratio ·40) in the preceding quarter, and those from *all other causes* not specified, 1,794 (ratio 6·68), against 1,905 (ratio 7·08) of the preceding quarter. Poori returned the highest death-rate from the unspecified diseases coming under the head of "Other causes," viz., 13·84 per mille; Serampore stands next with 12·92, followed by Monghyr 12·20, Gya 11·76, and Utterpara 10·88.

With regard to *Age*, infants under one year of age as usual perished in the largest numbers 188·08 per mille per annum, next come old persons (60 years and upwards) with a death-rate of 51·80 per mille. The lowest death-rate, which occurred between the ages of 10 and 15 years, is only 9· per mille of population.

Detailed information regarding the vital statistics of the twenty-seven principal towns of Bengal during the quarter under review will be found in the statement appended.

W. H. GREGG, *Dip. Publ. Health, Camb.*,
Sanitary Commissioner for Bengal.

The 5th October 1891.

Statement showing the Results of the Registration of Births and Deaths in the Principal Municipalities in Bengal during the Quarter ending 30th June 1891.

* Includes 650 tons carried for Revenue for which no "Up" and "Down" register maintained.
† Includes 358 tons for above in previous year for which no "Up" and "Down" register maintained.
‡ Railway plant and rolling-stock 108 tons and 115 tons for the years 1891 and 1890, respectively, for which no "Up" and "Down" register maintained.

Comparative statement of the principal commodities carried over the Bengal Central Railway during the month of July 1891.

The increases and decreases are due to ordinary fluctuations of traffic and call for no special remarks.

P. D. Barclay,
Traffic Superintendent.

Calcutta, *the 24th September* 1891.

Weekly Return of Traffic Receipts on Indian Railways.

EAST INDIAN RAILWAY.

Approximate Return of Traffic for week ended 26th September 1891, on 1,525½ miles open.

RESOLUTION ON THE GENERAL ADMINISTRATION REPORT OF THE CHOTA NAGPORE DIVISION FOR THE YEAR 1890-91.

GENERAL DEPARTMENT—MISCELLANEOUS No. 1323.

Darjeeling, the 8th October 1891.

READ—

The General Administration Report of the Chota Nagpur Division for the year 1890-91.

The report is submitted by Mr. Grimley who was Commissioner of the division throughout the year. Colonel Garbett, Colonel Lillingston, and Mr. Renny held charge of the Hazaribagh, Lohardugga, and Singbhum, districts, respectively, for the whole year. Mr. Baker had care of the Manbhum district for two periods, viz., from the 1st April to the 30th June 1890, and again from 7th December to the end of the official year; while Mr. Bedford filled up the interval. All these officers have considerable local knowledge of the division which in some respects presents peculiar difficulties owing to the character of the population. Of the three sub-divisions, one, Giridih, was under three officers, and each of the others, Palamow and Govindpur, under two officers during the year.

Tours.

2. The Commissioner was altogether 126 days in camp, of which 65 days were spent in the Tributary Mehals. He should arrange to visit each of the important States as often as he conveniently can, consistently with the requirements of the rules

regarding the inspection of districts and district offices. None of the sub-divisions within the Chota Nagpur Division were inspected by him during the year, nor (as appears on reference to previous reports) have they been inspected by a Commissioner since 1887-88, in which year Mr. Stevens visited all the sub-divisions except Palamow, which he had inspected during the preceding year. The narrative of the Commissioner's tour is interesting, but it would have been more to the purpose had it contained more useful information regarding the quality of the work done in the criminal, revenue, and civil courts, and the state of the offices. The three sub-divisional offices and treasuries were inspected once instead of twice during the year by their respective Deputy Commissioners. This is not satisfactory. Close inspection of every court and office should be looked on as one of the chief securities for the maintenance of a high standard of administration. The District as well as Sub-divisional Officers appear to have made useful tours, except the Sub-divisional Officer of Giridih, whose presence at head-quarters, it is stated, was frequently required for census work. There is an inconsistency in the explanations offered that census work should have required more out-door work from the other officers, while difficulties of an opposite character were experienced by the Sub-divisional Officer of Giridih. In a division so favourably adapted for camping, where contact with the people is specially important and office work is less absorbing than elsewhere, Sir Charles Elliott hopes that in future the District Officers will not limit their tours to the minimum required to satisfy the rules of Government.

Weather, crops, public health, and condition of the people.

3. The weather was on the whole favourable to the crops, though the rainfall was unevenly distributed, there being heavy and continuous rains during the monsoon, excessive rain in July, and a complete cessation from the 18th October till the 23rd January, followed by very severe hail and rain in March. Under these conditions the *bhadoi* crops were more or less injured throughout the division, while the winter rice was everywhere good. A certain amount of pressure appears to have been felt for a time only in the Palamow sub-division, where, in addition to the deficient crops of the previous year, the outturn of *rabi* crops generally and especially of *mohua*, which forms the staple food of the poorer classes, was very much below the average of previous years. With regard to the special crops, the most important among them, namely, sugarcane, was an excellent crop, while the less important crops, viz., tobacco, cotton and jute, were rather below the average. The outturn of lac in Manbhum was an extraordinarily good one. The price of rice and other winter crops was lower than during the previous two years in Hazaribagh and Manbhum, but slightly higher in the Lohardugga and Singbhum districts, for which no other cause can be assigned than the opening of the Bengal-Nagpur Railway, which does not seem to have as yet affected prices in Manbhum, perhaps because that district had, even previous to the opening of the Bengal-Nagpur Railway, a fair amount of export trade through the East Indian Railway stations on its borders—Sitarampur, Raniganje, and Assensole. The Bengal-Nagpur Railway, which was formally opened by His Excellency the Viceroy in person on the 3rd March last, but had been in working through the Chota Nagpur Division partially since December, 1889, as well as the extraordinary development of mining speculation, appears already to have effected an appreciable rise in the wages of unskilled labour throughout the division, and a marked diminution in the number of emigrants which fell off from 24,730 in 1889-90 to 10,066 during the year of report. There has been engendered among a portion of the Kol population, a strong desire, leading in the preceding year to a certain amount of violent agitation, for emancipation from the peculiar system of predial services which obtains over a great portion of Chota Nagpur. Recommendations for the commutation of these services into a money rent, as also for the extension of the Bengal Tenancy Act to Chota Nagpur in place of the existing law, Act I (B.C.) of 1879, have been laid before the Government of India, whose orders on the subject have recently been received.

Statistics regarding public health are only of relative value in this division, as in the rest of the province. The "Ardhodaya Joga" appears to have been the cause of an outbreak of cholera in Purulia and certain other parts of Manbhum. Influenza also prevailed more or less throughout the division, though in a mild

form. In other respects the year was healthier than the two which directly preceded.

Trade, commerce, manufacture, and mines.

4. The principal articles of manufacture in the division are lac in Lohardugga and Manbhum, tea in Hazaribagh and Lohardugga, tussur silk in Hazaribagh, Lohardugga, and Manbhum, indigo in Manbhum only, and catechu in Hazaribagh. The imports consist mostly of piece-goods. The total value of the outturn of all the articles above named was Rs. 7,56,859, against Rs. 6,48,032 in 1889-90 and Rs. 4,04,594 in 1888-89. The exports of rice and oilseeds in Manbhum are said to have exceeded those of the previous year by 70 per cent., and in Singbhum by 48 per cent. in value. The value of imports in Manbhum (of piece-goods), however, rose only by 11 per cent., but in Singbhum it is stated to have risen by 23 per cent., while in Lohardugga the imports are said to have risen to 2,69,960 maunds against 9,960 during the previous year. Much of the increase in the figures is, however, apparently due to the concentration of trade routes and of registration within the division by the Bengal-Nagpur Railway, which render impossible any intelligent comparison with the figures of previous years. The figures for the next year will, it is hoped, be more trustworthy for purposes of comparison, as their basis will be the same as the current year's figures.

Negotiations are now pending for the settlement of the Jheriah and Pandra coal fields in Manbhum. The yield of the Baragunda Copper Mines was 305 tons against 320 and 217, respectively, in the two preceding years. The output of mica from the Koderma Government Estate in Hazaribagh rose to 2,209 maunds against 1,499 maunds in the previous year. No reliable evidence of the existence of lead, silver or gold in paying quantities has yet been found, though a few companies and individuals appear still to be prospecting with perseverance. The extraordinary excitement which prevailed at one time, and formed a marked feature in the prospects of the division, seems to have generally subsided.

Crime, police and criminal justice.

5. The total number of cognizable cases fell from 7,337 in the preceding year to 6,848. The percentage of cases convicted to cases reported rose from 44 to 47, and the ratio of persons convicted to persons sent up for trial was 56 against 58. The number of non-cognizable cases rose from 3,121 to 3,491, and the percentage of convictions to institutions was slightly higher than during the previous year. The total number of cases dealt with in the Courts was 7,588 against 7,000 in the preceding year, the number of persons brought before the Courts being 11,761 against 11,562 in 1889. The increase in the number of cases is due to offences against property, miscellaneous offences under the Penal Code, offences against the Excise and Opium Acts, under the Arms Act, under the Municipal Act, and section 34 of Act V of 1861, and other special and local laws. The Lieutenant-Governor regrets to learn that there was an increase in the number of offences against public tranquillity in the Palamow sub-division, and that the Police were remiss in taking timely notice of these cases, which in this sub-division are generally connected with the crops. The total absence of a record of rights and the unsettled habits of the people are prolific causes of disputes regarding crops in the Chota Nagpur Division, but this is only an additional reason for taking prompt measures to prevent such disputes from terminating in a breach of the peace.

The ghatwali police are special features of the division. They are sometimes, it appears, paid in cash but generally receive service lands, and a scheme for the resumption of these lands and the reorganization of the ghatwals on the same lines as the rural police of the rest of the Province is under the consideration of Government. The ghatwals of Hazaribagh, Lohardugga, and Singbhum are reported to have worked well, though of the Manbhum ghatwals Mr. Baker says: "While the task of exacting their worthless so-called services imposes a good deal of work on the regular police and the District Magistrate, the difficulty of dealing with their service lands is fast increasing."

Civil Justice.

6. The institutions of regular suits fell off from 5,419 to 5,365, or 1 per cent., and of rent suits from 5,176 to 5,156. The number of regular suits disposed of

increased, by 17, from 5,337 to 5,354. A comparison of these figures would not lead to the supposition that arrears can be increasing. In regular appeals alone there are symptoms of inability to keep pace with the work, as the number disposed of was 273 against 468 instituted. The work done by the Judicial Commissioner is not shewn separately in this report, as it was shewn previously. The statistics given are not sufficient of themselves to bear out the complaint urged by three of the Deputy Commissioners, and supported by the Commissioner, that the civil work is overwhelming, and that more assistance is required. A special report will be asked for from the Commissioner on this subject.

Land revenue.

7. The total current land revenue demand of the division is Rs. 3,82,684 due from 466 estates, of which only 149 are permanently settled. The collections of the current demand were over 98 per cent, and the total arrear was less than Rs. 10,000, of which over Rs. 3,000 have been or will be remitted. For part of the remaining default the curious explanation is given "that the occurrence of the Fasli leap-year prevented its realization before the close of the official year." The collections of Road and Public Works cesses in Manbhum and Hazaribagh were discreditably low, being only 82 per cent of the current demand in the latter and 86 per cent. in the former. The explanation given is the stereotyped one that part of the balance was due on the 28th March. This explanation applies equally to the preceding year when the joint arrear of these districts was only about Rs. 11,000: it has now risen to Rs. 38,000. Revaluation has been going on in two districts, Hazaribagh and Lohardugga, for two years, and should be pushed to a conclusion. It is expected to produce a considerable increase.

Encumbered estates.

8. Fifty-seven encumbered estates are managed by the District Officers under the provisions of the Special Act VI of 1876. The total current demand is Rs. 3,71,862, all of which was collected, though hardly any impression was made on the large volume of arrears—about 3¼ lakhs. Out of these collections, debts to the amount of Rs. 2,40,709, were paid off, and the total indebtedness at the end of the year was reduced to Rs. 12,40,460. These results are very favourable to the indebted proprietors.

Miscellaneous revenue

9. The Excise revenue in the division is derived principally from the sale of licenses for outstills. The distillery system is in force in only a small area in the Giridih subdivision. In spite of a reduction in the number of shops and an increase in the minimum price of liquor, the total Excise revenue rose from Rs. 5,67,233 in 1889-90 to Rs. 6,65,411 in the year of report. This increase is attributed to the generally good harvests. There was a decrease of Rs. 5,728 or 2·1 per cent. in the revenue from judicial stamps, compensated by an increase of Rs. 13,511 or 16·5 per cent. in that from non-judicial stamps, the net increase being Rs. 7,783. There was a substantial increase in the demand for income-tax in Manbhum on account of the assessment of profits due to concessions of mining rights. The total demand for the whole division rose from Rs. 88,304 to Rs 92,193.

Communications.

10. The opening of the Bengal-Nagpur Railway marks an epoch in the economic condition of this division. Attention may very profitably be now directed to the construction of feeder roads to foster the development which might be expected from the railway. Provincial funds are being largely spent on the main roads from Ranchi to Purulia and from Ranchi and Chyebassa to Chakardarpur, both stations on the railway; and Sir Charles Elliott hopes that the District Boards will now actively engage in constructing cheap feeder roads to the different railway stations within their jurisdiction. In Manbhum three such roads have been constructed with a total length of 7 miles, while in Singbhum a commencement has been made by starting a new road between Chyebassa and Amda, the nearest station on the railway.

Education.

11. The statistics regarding education furnish several noticeable features. The population of Hazaribagh, Lohardugga, Manbhum and Singbhum, respectively, according to the last census, is 1,162,483, 1,746,655, 1,193,255, and 675,653. Manbhum, however,

heads the list in point of the number of Government aided schools, but the total number of pupils of both sexes and all races is very nearly the same in all the districts, with a slight preponderance in favour of Lohardugga. The percentage of the number of pupils to the total population in each of the districts is 1·3 in Hazaribagh, less than 1 in Lohardugga, 1·2 in Manbhum, and above 2 in Singbhum. Singbhum also heads the list in the number of its female schools as well as in the number of female pupils. The classification of the pupils by races shows that 38,739 returned themselves as Hindus, and only 17,166 as aborigines. The cost of the 50,528 pupils to Government was Rs 1,34,756, or Re. 1-10-8 per head, while to the 3,680 children in mission schools a grant of Rs. 9,069 was given, or Rs. 2-7-5 per head. The attention of the Director of Public Instruction will be drawn to this discrepancy.

Local Self-Government institution.

12. The Local Self-Government Act III (B.C.) of 1885 is not in force in the Chota Nagpur Division. The record of attendance in municipal meetings shows a generally fair average, except in the Lohardugga district, where a gradual decadence is observed. The attendance in Road Committees was poor everywhere. In Hazaribagh it is said that "the members of the District Road Committee in and about the town took more interest in the working of the Act than those living in the interior of the district." "In Lohardugga the attendance of the non-official members is reported to have been very unsatisfactory, inasmuch as out of nine non-officials, three attended only two meetings and two failed to attend any meetings." "In Manbhum the District Road Committee regularly met almost once a month, but rendered very little assistance to the District Officer." Mr. Baker writes: "The gentlemen who form the Committee are for the most part residents of Purulia (the district head-quarters). They have their own business to attend to here, and have little or no knowledge of the interior of the district. They, therefore, seldom make useful suggestions regarding works of which they know nothing. The actual work is thus practically left to the District Engineer and the Deputy Commissioner." Such a state of things is much to be regretted, as it shows a want of appreciation on the part of the people of the desire of Government to foster Local Self-Government to useful ends.

Conduct of zemindars.

13. The conduct of the zemindars in regard to Government is reported to be excellent: they are described by the Commissioner as being all loyal and faithful subjects. Special mention is made of the Thakurai Bhagwat Dyal Sing of Lohardugga as being the most enlightened and as taking an intelligent interest in all public matters. The relations between the zemindars of Lohardugga and their Kol tenants are reported to be anything but satisfactory owing to oppressive exactions on the part of the former, while in Manbhum Messrs. Watson and Company, the ijardars of the Burrabhum Estate, are said to be unpopular on account of their determined though apparently not very remunerative efforts to grow indigo against the will of the raiyats. The Rajah of Pachete has paid up the balance of his promised contribution of Rs. 5,000 to the Purulia Municipality for the better supply of water to the town.

14. The thanks of the Lieutenant-Governor are due to Mr. Grimley, the Commissioner, for his administration of the division during the year. Sir Charles Elliott also notices the favourable reports which the Commissioner gives of three out of the four Deputy Commissioners in the Division. The remarks of the Commissioner and the Deputy Commissioners on the various officers employed in the division during the year will be communicated to the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

RESOLUTION ON THE GENERAL ADMINISTRATION REPORT OF THE ORISSA DIVISION FOR THE YEAR 1890-91.

GENERAL DEPARTMENT—MISCELLANEOUS No. 1324.

Darjeeling, the 8th October 1891.

READ—

The General Administration Report of the Orissa Division for the year 1890-91.

The Orissa Division was administered throughout the year by Mr. Worsley, who took furlough soon after its close. The report is submitted by his successor, Mr. Toynbee, who explains that, owing to his absence at Keonjhur in connection with the disturbances, he has been unable to give it his full personal attention. Under the circumstances, the Lieutenant Governor would have been willing to allow time for its preparation, as he is anxious that these reports should represent the Commissioner's own views and contain a complete account of the administration.

Tours and inspection.

2. Mr. Worsley's tour occupied 100 days and extended over nearly every month of the year. He appears to have inspected the head-quarters of Puri and Balasore and the subdivisions of Tajpur, Bhadrak and Kendrapara, omitting that of Khurda as well as Angul and the Khondmals. Of the Tributary States, he visited Athgarh and Dhenkenal alone. His inability to visit all these States is much to be regretted. The recent disturbance in Keonjhur and the complaints against the Raja's administration show how necessary it is for the Superintendent to maintain a close and careful supervision over the Tributary States. All the district officers spent sufficient time in camp, and were usefully employed in inspecting all the subdivisions and many of the thanas, and Sir Charles Elliott hears with pleasure that the existence of so many bungalows in the three districts renders it comparatively easy for them to be out at all seasons. The subdivisional officer of Jajpore failed, owing to ill-health, to tour for the prescribed period. It is not stated whether the Commissioner inspected the Puri office and treasury during the month he spent there. Otherwise the inspections in this division were sufficiently frequent, and His Honour trusts that they were thorough.

Crops and the public health.

3. The province recovered to some extent the prosperity which was wanting in the previous year. The divisional average of rainfall exceeded that of the last two years. Only in the Puri district was it less than last year according to the figures, but still it was above the average, producing a 16-anna rice crop. The outturn of the principal crops showed an improvement corresponding to the rainfall, represented in annas, as follows :—

	1888-89.	1889-90.	1890-91.
Wheat	11	6	8
Pulses	11⅓	9⅓	11⅓
Rice ...	9½	12½	12

In Cuttack and Puri the people reaped the benefit of a fairly good harvest, accompanied by a brisk export trade in rice. In Balasore the relief operations were closed in October 1890, at a total cost to Government of Rs. 1,750. The average price of rice in the division has varied from 19 seers 12 chittacks the rupee in 1888-89 to 17 seers 15 chittacks in 1889-90 and 19 seers 8 chittacks in 1890-91. The demand for exportation kept up the price higher than might have been expected after the previous good harvest, which had replenished the granaries of the province.

There was also, on the whole, a marked change for the better in the public health. Though the deaths from fever increased somewhat, the mortality from cholera fell from 48,122 to 6,847. With regard to the sanitation of Puri, the Collector's remarks may be quoted :—

"This year again there has been a great fall from 20,342 to 1,791, but it must be ascribed to circumstances beyond our control. So long as pilgrims are compelled in the name of religion to bathe in tanks whose contents have been proved to be little better than liquid sewage, and to eat holy food in a state of putrefaction, the efforts of the Health Officer can effect no real good. As Mr. Duke said last year in his annual report, while the food and the drink of the place are not controlled, other measures for the prevention and alleviation of cholera are a mere farce, and while the Municipality is constituted as at present, there seems no reasonable expectation of these subjects being properly dealt with.

"The Government of India has, I am happy to say, called attention to the insanitary condition of Puri, and the Sanitary Commissioner of Bengal visited the town last December; but it is idle to expect any real improvement without a radical alteration in the body responsible for town sanitation."

This matter requires the serious attention of the Government officers of the district, and the Lieutenant-Governor understands that the Collector is preparing a report on the remedial measures to be adopted. If anything were wanting to enforce the intimate relation between good water and mortality, a text might be found in the fact that an improvement in the water-supply of Balasore has been accompanied by a simultaneous decrease of the deaths from cholera from 13,000 to 1,400.

Manufactures and trade.

4. The agricultural character of Orissa attaches a special interest to the subjects of the production and price of food grains. Of the manufactures, salt alone is of any importance, and that is now in the hands of the Madras Salt Department. The manufacture of Pungah salt in Cuttack and Balasore has been stopped. The Kurkutch factories in Balasore yielded 990 maunds, in Puri 61,765 maunds were produced, but 1,28,295 maunds were sold by drawing on stocks in hand. The minor artistic products of the country maintained their position, but there is no indication of any expansion or improvement among them. The sea-borne trade of the province has increased in all the districts, showing a total value of Rs. 1,41,15,263, made up of Rs. 59,42,695 imports and Rs. 81,72,568 exports. The total value of trade has not yet recovered the figures of 1886-87 and 1887-88. The special features of the year are the great rise in the exports, especially to Madras, and the decrease in the imports to Balasore. There is also a remarkable development in the passenger traffic from 146,277 to 228,185 persons, due to the canal and sea routes becoming more and more resorted to by pilgrims. It is satisfactory to read of the general opening up of the country, and the removal of the isolation in which the Uriyas once lived. When railway communication is established, the province should receive another great impetus towards civilization.

Administrative changes.

5. Mr. H. R. Reily was appointed Settlement Officer of the Cuttack and Puri districts towards the close of the year under report, to revise the assessment of the temporarily-settled estates, of which the present settlement terminates in 1897. This work is outside the ordinary administration, but necessarily adds largely to the work of the district officers and Commissioner. The settlement operations proper, as distinguished from the Cadastral Survey, were not actually commenced until 1891 92. Certain minor changes were effected, such as the abolition of the outstill system in Balasore, the legalization of trade in Gurjat siddhi, the possession of small quantities of Gurjat ganja, and the appointment of a district Health Officer for the rest-houses on the Puri road. The number of Mahomedan employés advances slowly, and necessarily so in this division. But as Mahomedans only number about 2 per cent. of the whole population, they have no ground for complaint when they hold from 15 to 25 per cent. of the appointments, a fair number of them being in superior service.

Crime, police, and justice.

6. Crime in this division is comparatively light, but the police are said to be less capable of dealing with it efficiently than in other divisions. The population being chiefly agricultural, cases of criminal trespass and mischief and disputes regarding land and crops are most common. Comparing 1890 with 1889, cognizable cases fell from 6,980 to 6,646 and non-cognizable from 6,064 to 5,440. The decrease is attributed to the improved condition of the lower classes, and more especially to the village police, whose pay depends largely on voluntary contributions, being paid more regularly in a year of plenty, and not compelled to steal in order to earn a bare subsistence. The unsatisfactory condition of the village police is known to Government, but no great changes can be made until the question of Chakran lands has been dealt with by the settlement officer, and the proper number of chaukidars on a suitable rate of pay has been appointed. The Commissioner has given no statistics of criminal justice, except of the number of cases decided by the Honorary Magistrates and Benches. They appear to have worked well on the whole, and to have relieved the Stipendiary Magistrates to an appreciable extent. In civil justice the suits increased in number from 12,307 to 13,071, but decreased in value from Rs. 12,25,784 to Rs 10,62,304.

Land revenue.

7. The remarks recorded in the Resolution of the 30th September 1890 on the Commissioner's report for 1889-90 appear to have stimulated those concerned with the land

revenue. The idea that 90 per cent. collections on the gross demand were satisfactory was then overruled. It is now stated that the percentage of collections on the gross demand was 96 for the whole Province, viz., 99 in Balasore, 97 in Cuttack, and 93 in Puri—an improvement attributable partly to the more favourable character of the season, and partly to the greater activity shown by the executive in realizing the demands. The remissions in Puri were large, Rs. 7995, but the total figure for the division was only Rs. 9,465, against Rs. 19,683 in the preceding year. The unrealized balances fell from Rs. 1,71,966 to Rs 59,665, and afford some indication both of the restored prosperity of the division and also of greater efficiency in the collecting establishment. The collections in Khurda are stated to have been unprecedentedly good, but bad in Angul, though the report indicates a possibility that that arrear may be unreal, and owing to the inclusion of a kist which does not fall due within the year. If so, the demand statement should be corrected. Including these two large estates, there were 36 estates under direct management with a total demand of Rs. 4,91,949. Of this only 89 per cent. was collected—a rate which does not reach the standard that should be attained. The collections of the Road and Public Works Cesses were similarly inadequate. The canal rates were again collected very insufficiently. The following figures speak for themselves. Of a total demand of Rs. 5,40,049 (viz., current Rs. 3,31,190 and arrear Rs. 2,08,859) only Rs. 2,49,344 were collected, while Rs. 34,070 were remitted and a balance of Rs. 2,56,635 left outstanding. This state of affairs is discreditable: it has already attracted Government attention in the Irrigation Department, and it is hoped that no long time will elapse before the adoption of measures to effect a remedy.

Miscellaneous revenue.

8. The excise collections, with various fluctuations, show almost an equilibrium in the total realizations, the net increase being only Rs. 112. The substitution of distilleries for outstills caused an increase in the revenue from country spirits in Cuttack, but a decline in Puri. The anomaly is explained by the superior facilities of the Cuttack district for water-carriage. The stamp revenue receipts decreased by Rs. 330, while the charges increased by Rs. 532. The fluctuations in this revenue depend upon different causes, which act upon each other. But there can be no question that the gross charges should not rise with a diminished revenue. For income-tax a larger number of persons were assessed and to a higher amount than in 1889-90, but the amount of actual collections is not recorded. The development of the system of ordinary and revenue money-orders and Savings Banks deposits, and of the currency note circulation, testifies to the gradual awakening of the province from its former lethargic condition.

The Puri Lodging-house Act.

9. The importance of maintaining a proper system of conservancy on the main line and places of pilgrimage is admitted by Government. The following quotation from the Commissioner's report shows the action now being taken:—

"The Puri Lodging-house Act was in force during the year under report in the towns of Puri and Chandbally. It was also extended during the year to all the chutties along the Grand Trunk Road in all the three districts of the division. In Cuttack nothing was done during the year beyond the preparation of lists of houses and the number of persons each house could accommodate. The management of these lodging-houses is under the control of the Magistrate assisted by the Health Officer, and the establishment charges are paid from the Jagannath Road Fund. The lodging-house keepers did not at first come forward for licenses, thinking that the rate payable per head under section 8 would, if they held out, be fixed at 3 pice as in Puri; but finding that the Magistrate was determined to adopt the 4 annas rate, as in Balasore, they have since begun to apply for licenses. In Puri, since the appointment of the Health Officer in March 1891, the licensing work has been vigorously pushed forward. A nominal rate of one pice per lodger has been fixed to begin with. The District Board granted an annual contribution of Rs. 2,000 towards the maintenance of a system of conservancy on the line of road."

There is now licensed accommodation in Puri for more than 16,700 pilgrims, the receipts of the Lodging-house Fund amounting to Rs. 12,126 a year.

Education.

10. The statistics of education show some recovery as compared with the numbers of the preceding year, as exhibited in the following table:—

			Schools.	Pupils.
1888-89	...	...	8,421	125,786
1889-90	. .	...	8,073	115,786
1890-91	...	...	8,562	122,846

This gain was achieved under both the heads of public and private institutions, and almost entirely in the primary and elementary schools. Of the boys of school-going age, only about 44 per cent. are at school, and 2 per cent. of the girls. This is not a satisfactory account of female education, and it appears also that the number of special girls' schools has fallen from 105 to 93. A better report of Mahomedan education is given than elsewhere, as it is said that the percentage of boys of that religion at school is always higher than the proportion among Hindus. No special measure was adopted during the year by the District Boards for the encouragement of education among the aboriginal and low caste population, but the number of institutions of indigenous education not conforming to the departmental standards of instruction increased from 955 to 1,107. The Lieutenant-Governor would have been glad to have had a fuller account of the work done by the Normal, Medical, and Surveying schools in Cuttack.

Dispensaries.

11. Mr. Stevenson has rightly drawn attention to the fact that the number of dispensaries is very small, considering the population, and it is hoped that the District Board will be able to open a larger number. There are six in the Cuttack district, five in Balasore, and five in Puri. Considering the enormous influx of pilgrims into these districts at all times of the year, especially at the most unhealthy time, and the large amount of sickness and death which is the result of pilgrimage, this number of dispensaries must be condemned as wholly insufficient.

Local self-government.

12. The attendance at the meetings of the District Boards and Municipalities is somewhat better, but there is still room for much improvement; and it is to be feared that, besides attendance at the meetings, very little real work is done by the members. There seems to be no attempt made to divide the districts or the towns into areas, for which each member should be regarded as the representative and should be required to possess local knowledge and specially bring forward its wants. It is something that in most cases the committees are considered to have worked harmoniously, but in Balasore, though individuals "show interest and devotion to their work, the good effect of local self-government is generally much marred in this district by rancorous party-spirit." Again, the "selection of Chairman and Vice-Chairman was productive of much unseemly friction." The Commissioner will be requested to give his attention to this state of feeling in Balasore. The reported inability of the Puri Municipal Commissioners to do justice to the pilgrim population also appears to require a remedy, if they cannot be induced to understand their responsibilities.

Conduct of zemindars.

13. On the subject of the conduct of zemindars, the Commissioner writes as follows:—

"In Balasore, Raja Baikanta Nath Dey Bahadur again took the lead in matters of public interest, and rendered much assistance to the district officer in his capacity of an Honorary Magistrate. By the death of Rai Nimai Charan Bose Bahadur, of Bhadrak, the district has lost one of its ablest and most enlightened zemindars. Babu Govind Ballav Roy Mahashoy, of Kawpore, is reported to have been conspicuous for his public spirit and for his friendly relations with his tenants.

The Raja of Parikud continues to be the only Puri zemindar who is at all conspicuous for public spirit and good work.

In Cuttack none of the zemindars, except Raja Baidya Nath Pandit, deserves special mention. Their conduct to, and their relations with, their ryots were generally satisfactory."

14. Mr. Worsley's careful and thorough administration of the division was facilitated by the general recovery of prosperity, but deserves nevertheless the thanks of Government. Mr. Stevenson, Mr. Duke, Mr. Allen, and Mr. Cornish, who held charge of the three districts during the year, are favourably mentioned by the Commissioner and entitled to the acknowledgments of the Lieutenant-Governor.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

RESOLUTION ON THE REPORT OF THE BOARD OF REVENUE ON THE ADMINISTRATION OF THE SALT DEPARTMENT FOR THE YEAR 1890-91.

FINANCIAL DEPARTMENT - SALT.

Darjeeling, the 7th October 1891.

RESOLUTION—No. 333T—F.

READ—

The Report of the Board of Revenue on the Administration of the Salt Department for the year 1890-91.

THE following statement shows the receipts and charges of the Department since 1885-86 :—

HEADS.	1885-86.	1886-87.	1887-88.	1888-89.	1889-90.	1890-91.	Increase in 1890-91 compared with 1889-90.	Decrease in 1890-91 compared with 1889-90.

* The discrepancy between these figures and the figures in the corresponding statement in the report for 1889-90 is due to the receipt of revised figures from the Commissioner of Salt Revenue, Madras.

† The discrepancy between these figures and the figures in the corresponding statement in the report for 1889-90 is due to the inclusion of miscellaneous receipts realized in Orissa.

2. The results of the year under review, as compared with the previous year, show an increase of Rs. 6,07,940, or 2·6 per cent. in the receipts, and a decrease of Rs. 2,429, or 6 per cent. in the charges. The net revenue realized is larger than that of any year since 1881-82. This development of revenue, which extends to all heads of receipt except miscellaneous, occurred in spite of an increase of 66,224 maunds in the importation of duty-paid salt from Bombay, which, if charged with duty in Calcutta, would have raised the revenue to a still higher figure. The advance in import duty, which makes up all but a small fraction of the receipts, is attributed by the Board to a rate of exchange more favourable to importers, and to the fall in the prices of Liverpool and other descriptions of salt. The revenue from excise salt shows an improvement on that of the year 1889-90, but is less than that of any of the preceding years. The increase as compared with 1889-90 is due to shorter shipments of salt from Ganjam causing a larger demand for locally manufactured salt in Orissa. The proceeds of the rent of warehouses show an increase of Rs. 3,445, although the quantity of salt bonded declined from 38,67,312 maunds in 1889-90 to 29,99,281 maunds in the past year. Notwithstanding the decline in the quantity bonded, those merchants who availed themselves of the golahs kept

their salt there for a much longer period than formerly, owing to the reduction of charges and the facilities afforded by the construction of the shunting line connecting the golahs with the Howrah Railway terminus. The landing of salt at the golahs, and its conveyance therefrom to the boats, will be further facilitated when the pontoons under construction in front of the golahs have been completed. The decrease in charges occurred chiefly under the head of refund of customs duty.

3. The total quantity of salt in stock at the commencement of the year was 25,99,327 maunds, comprising 24,65,466 maunds of imported salt and 1,33,861 maunds of excise salt During the year 97,62,835 maunds were imported by sea into Calcutta and Chittagong, and 62,770 maunds were manufactured, against 1,00,72,857 and 70,293 maunds in the previous year. The decline in imports, which was due mainly to the unusually large stock in hand at the beginning of the year, affected chiefly the importations from the United Kingdom, the Arabian and Persian Gulfs, and Madras. The receipts from Hamburg, Bombay, and Aden, on the other hand, show an improvement over those of the previous year. The trade with Madras is greatly impeded by difficulties of transport, for the British India steamers do not carry salt in bulk, and the shippers have to provide bags and give the buyers an allowance for wastage. The statement in the margin shows that Liverpool salt is beginning to give way to the cheap crushed salt introduced from Hamburg, Aden, and the Sulkea Salt Golahs, where machines have been erected to crush kurkutch salt. This crushed salt is reported by the Collector of Customs to be of excellent quality and of good colour, but in competing with Liverpool salt it labours under a serious difficulty by reason of its comparatively lesser bulk. The point is thus explained in a graphic and interesting passage of Mr. Armstrong's report:—

	QUANTITIES OF LIVERPOOL PUNGAH AND CRUSHED SALT RESPECTIVELY THAT HAVE PASSED INTO CONSUMPTION.			
	Liverpool.	Hamburg.	Aden crushed.	Golah crushed.
	Mds.	Mds.	Mds.	Mds.
1888-89 ...	73,76,095	1,08,441	...	...
1889-90 ...	66,82,380	3,25,649	...	18,200
1890-91 ...	61,87,206	7,41,991	28,183	1,02,602

"Salt is brought wholesale by weight, but I believe I am right in saying that the general practice in the parts supplied from Calcutta is to retail it by measure, usually by the handful. Liverpool salt does not pack so close as crushed *kurkutch*; its grain is looser and less compressible, so that 1 cubic foot of Liverpool salt = 29 seers, while 1 cubic foot of crushed Hamburg salt = 32¼ seers, and 1 cubic foot of crushed *kurkutch* = 33½ seers. To give equal weight, which is what the retail seller has to think of, he must therefore give a smaller handful of crushed salt for the money than he has been in the habit of giving of Liverpool, and the buyer, who is accustomed to the larger handful, and has not grasped the fact that the smaller one contains just as much salt, haggles over the bargain. If to get over this the same sized handful is given, then, for it to pay the seller, the crushed salt must be much the cheaper of the two, and it is, and this has given it a start.

"The trouble over the difference of bulk does not stop with the retail buyer and seller. When the buyer gets home he gives the salt to his wife or servants, as the case may be, to cook with. This worthy woman has been in the habit of salting the food to a nicety, measuring the salt in her fingers, but until she has learned the mystery of the difference in bulk, when she first uses crushed salt she inevitably puts in an overdose. I am seriously informed that at its introduction this new salt has been a fruitful source of domestic heart-burnings, which is very likely to be the case. To an Indian householder sitting down to his simple meal it must be even more irritating to find it spoiled by oversalting than to us to find the soup has been overdosed, for he has no other courses at hand to fill up the gap. I cannot help thinking, however, that with time and patience these difficulties will disappear: the retail buyers and their housewives will learn by experience, as they are learning that a quantity of the crushed salt, smaller by measure, weighs just as much and goes just as far as a quantity, larger by measure, of the Liverpool salt. If I am correct in this surmise, and the crushed salt succeeds in achieving a really large market, then it can hardly be doubtful that Liverpool salt will gradually disappear. It commenced coming here, I believe, about 1850, to take the place of the salt which used to be manufactured in these provinces, and was also *pungah* or boiled salt; it was introduced gradually and not without difficulties, and it will have to give way to a cheaper substitute."

4. Duty was paid on 63,52,683 maunds of salt cleared from shipboard at Calcutta and Chittagong, as against 58,14,763 maunds in 1889-90, these clearances showing an increase of 5,03,193 maunds, or 8·7 per cent., in Calcutta, and of 34,682 maunds, or 115·7 per cent., in Chittagong. The two ports together give an increase of 5,37,875 maunds in the quantity cleared, and of Rs. 12,75,601 in the duty realised. The increase in the clearances from shipboard has been somewhat counterbalanced by smaller clearances from bond, which amounted

to only 29,76,436 maunds against 32,64,318 maunds in 1889-90. The decrease is shared by the ports of Calcutta and Chittagong, while there was an increase of 81,773 maunds in the clearance of salt at Naraingunge, which is due to the steady development of that place as a port for the salt trade.

5. Including all classes of salt cleared during the year, the total amount which passed into consumption was 98,36,645 maunds as compared with 95,45,652 maunds in 1889-90. Of those 98,36,645 maunds thus available for consumption, 13,34,454 maunds were exported to Assam, Upper India and across the frontier, against 12,66,297 maunds similarly exported in the preceding year. From this quantity, however, must be deducted 3,97,989 maunds imported from Upper India and Madras, so that the net exports may be stated at 9,36,465 maunds, and the balance of salt remaining for consumption in Bengal at 89,00,180 maunds. The salt which is taken out from Calcutta for consumption in the saliferous tracts bordering on the sea coast is covered by special rowannahs; and the Board have been able to utilize these figures to compile the following table showing the consumption of salt in the saliferous and non-saliferous tracts in Bengal during the years 1889-90 and 1890-91, calculated on the population recorded in 1881. The subject is not free from difficulty, and is complicated by the imperfection of the statistical data available:—

	Quantity consumed in 1889-90.	Quantity consumed in 1890-91.	Population.	Consumption per head of population in 1889-90.			Consumption per head of population in 1890-91.		
	Mds.	Mds.		lbs.	oz.	dr.	lbs.	oz.	dr.
Saliferous tracts	7,13,117	7,56,214	5,200,231	11	4	2	11	14	15
Non-saliferous tracts	80,83,731	81,44,966	64,336,630	10	5	1	10	6	12
Total Bengal ...	87,96,848	89,00,180	69,536,861	10	6	4	10	8	5

The total ascertained in the recent Census gives 9lbs 13½ oz. as the average consumption of salt for the whole of Bengal; but the compilation of the Census returns is not yet sufficiently advanced to make it possible to distinguish between saliferous and non-saliferous tracts. The normal consumption of salt per head is given by European authorities at 17·20lbs—a figure which is not far removed from the 17·80lbs stated to represent the average consumption of the Madras Presidency in 1888-89, excluding certain districts in which the statistics cannot be relied on. Sir John Strachey, however, in his work on the *Finances and Public Works of India*, estimates the average annual consumption at 12lbs per head, and the following statistics seem to show that the amount of salt consumed varies greatly in different parts of the country, according to the habits of the people and their standard of living:—

	1886-87.	1887-88.	1888-89.	1889-90.	1890-91.
Area under Northern India Salt Department	9·37	8·60	8·50	8·59	...
Area under Bombay Salt Department ...	10·54	11·59	10·96	...	...
Trans-Indus Territories of Punjab ...	...	19·67	23·38	20·86	...
Orissa and Tributary Mehals ...	11·59	11·36	10·26	11·20	10·42
Madras Presidency	16·28	16·57	17·80	16·84	...

In the prosperous districts of Bengal Proper, where the staple food of the people is rice, the consumption is believed to be not less than 12lbs per head; in Behar it is about 9lbs; in Chota Nagpore probably somewhat less; in Orissa, including the Tributary States, it usually exceeds 11lbs. According to the Board's statement, quoted above, the consumption per head in the salt-producing tracts along the coast is higher than in the non-saliferous districts of the interior; but this comparison must not be pressed too closely, for the figures cannot pretend to any exactitude in representing the amount actually consumed in the non-saliferous area, and the results of personal inspections made by the Lieutenant-Governor on tour lead him to doubt whether the fact that salt was despatched under rowannahs into the saliferous tracts can be taken as proof positive that it was eventually consumed within those tracts.

6. The supply of salt to the Bengal districts is distributed chiefly from the ports of Calcutta and Chittagong. Orissa gets its supply by local manufacture and by importation from Ganjam and Calcutta. In the Behar districts

salt is obtained partly from the North-Western Provinces, while in Chittagong a small quantity of salt is clandestinely brought in from Arracan, where the rate of duty is only Re. 1 per maund. The following table shows the salt trade of Bengal with other places in India:—

	1886-87.	1887-88.	1888-89.	1889-90.	1890-91.
	Mds.	Mds.	Mds.	Mds.	Mds.

Net export ...	9,99,280	10,68,152	9,43,298	7,48,804	9,36,465
Net exports to Upper India ...	7,27,447	7,07,915	4,59,828	4,59,483	4,97,707

The net export increased in 1890-91, because the high price of Liverpool salt in the preceding year had reduced it to an abnormal degree; but on the whole the improvement of railway communication and the lowering of freights are enabling the Rajputana and Punjab salts to compete more successfully with Liverpool and other imported salts, and to drive their limit of consumption nearer to the sea. The result is a subject for congratulation, since salt is an article which India ought to manufacture for itself, and not to import.

7. Statements A and B appended to the Board's report show the wholesale price of salt at monthly periods in the bazars of district head-quarters and at fortnightly periods in certain selected marts. As might be expected, the prices in Calcutta are the lowest, and those in the outlying districts of Rungpore, Darjeeling, Purneah, and Singbhoom are the highest. The price of Liverpool salt, which was artificially raised in 1889-90 by the action of the Cheshire Salt Syndicate, fell off considerably during the past year. The average wholesale price of Liverpool salt per 100 maunds as sold from the ship's side in the port of Calcutta, exclusive of duty, was Rs. 77-12-9 against Rs. 94-6-11½ in 1889-90. Including duty, but excluding transit and other incidental charges, the cost-price, in the past year, of 100 maunds of Liverpool salt taken from Calcutta was Rs. 327-12-9. The statement given in the margin shows the average prices of salt exclusive of duty at the Orissa factories during the year under review, as well as in the previous year. It appears that salt could be made at Tua at a cost of 6 annas 4 pies per maund, or Rs. 40 per 100 maunds; yet, as a matter of fact, Liverpool salt which was sold from ship's side, exclusive of duty, at Rs. 78 per 100 maunds, and carried from Calcutta to Cuttack, could be sold there at the average price of Rs. 3-12 a maund to compete successfully with local produce, which was available for about Rs. 3 a maund. This anomalous result is said to be due to the preference of people for Liverpool salt. Although this may be the case for the present, there is no doubt that Liverpool salt will not be able to hold its ground permanently against the cheaper salts of country manufacture.

Salt station.	Year.	Average price per maund *ex duty*. Rs. A. P.

8. The total number of seizures of contraband salt decreased from 977 in 1889-90 to 715 in the past year. In Midnapore, however, the number rose from 109 to 196, but the quantity of salt attached fell from 35 maunds to 24 maunds. The proportion of seizures to unsuccessful searches in Midnapore shows a decided improvement over that of last year. The number of cases of illicit

manufacture rose from 213 in 1889-90 to 238 during the year under review: of the 238 persons put on trial, 209 were convicted. The increase in the number of seizures and convictions is attributed to the better supervision of the police. In the 24-Pergunnahs the number of seizures was 216 against 239 in the previous year, and the quantity of salt attached was 41-14-6 maunds against 589-19-4 maunds in the previous year. There was not a single case of unsuccessful search in this district. The proportion of seizures to unsuccessful searches in Backergunge was 38 to 14. The result, though better than that of 1889-90, when the number of unsuccessful searches exceeded the number of seizures, is still very unsatisfactory. In Balasore the proportion of seizures to unsuccessful searches was 185 to 71. Having regard to the fact that an additional preventive establishment has been sanctioned for the suppression of the smuggling of salt in the district, a larger proportion of successful searches might have been expected. The number of cases instituted for offences against the Salt Laws was 987 against 1,490 in 1889-90. The number of persons apprehended also decreased from 1,529 to 1,008. The amounts realized as fines and disbursed as rewards were Rs. 7,995 and Rs. 5,873 against Rs. 11,339 and Rs. 7,499 respectively in the previous year.

9. The number of cases for offences against the Salt Laws in Orissa decreased from 4,189 to 2,087, and of persons infringing the laws from 1,041 to 397. The Commissioner of Salt Revenue, Madras, attributes this to the defective state of the law and to the orders of the Government of Bengal not to interfere with trivial cases of manufacture for domestic consumption. The Board, however, do not share the Commissioner's view, and are of opinion that the decrease was not unsatisfactory from one point of view, as it would indicate that there was less of harassment and annoyance to the people. It is noticed by the Board that eight infirm persons, women and children were apprehended, and that 96 persons were apprehended for possessing less than one seer of contraband salt or less than five seers of salt earth, against 28 and 153 in the previous year. They were all released, it is stated, by the Salt Department, after giving a warning to the persons implicated. Under these circumstances, the Board are quite right in deprecating indiscriminate arrests of persons transgressing salt laws and rules.

10. Since 1886 the officers of the Madras Salt Department have been employed in Orissa, but the formal transfer of the salt operations in Orissa was not effected before February 1888. Formerly two species of salt were made in Orissa, viz. *pungah* or salt manufactured by boiling, and *kurkutch*, or salt manufactured by solar evaporation; but on the introduction of the change of administration, the rowannah system was abolished and the manufacture of *pungah* salt, being difficult of supervision and dangerous to the revenue, was absolutely prohibited, and licensed *kurkutch* factories sanctioned in its stead. An important change in administration was effected during the year under review. It having been represented that the excise licensees at Tua on the edge of the Chilka Lake worked very irregularly, and that the employment of the Molanghis, who were previously engaged in the *pungah* manufacture, was consequently very uncertain, a Government salt factory at Tua was established in January 1891, in the interests of the ryots who want employment, as well as of the general public who want cheap salt. The opening of another factory at Sartha in the district of Balasore was sanctioned at the same time, as an experimental measure, in order to settle the question of the feasibility of kurkutch manufacture in that district. The system of direct manufacture was started late in the year and under difficulties, and its immediate results are still uncertain, but there is no doubt that the measure is right and will succeed in the long run. In the season of 1890 six licenses for the manufacture of salt were taken out against five licenses issued in the preceding season. All the licensees are local men and not Madras capitalists, as has been alleged by opponents of the system introduced in 1888, but the result of the past two seasons shows that they are not making an earnest endeavour to secure a large outturn. The receipts of the Salt Department in Orissa increased from Rs. 2,01,661 in 1889-90 to Rs. 3,22,262 in the year under review, the proceeds of the duty on excise salt being Rs. 1,98,310 in the former case and Rs. 3,21,044 in the latter. The expenditure at the same time rose from Rs. 1,07,294 to Rs. 1,09,932. The percentage of charges during the years 1889-90 and

1890-91 amounted to 53·2 and 34·1 per cent. respectively of the total revenue collected. The ratio is too high, and must be reduced as soon as manufacture is well established and the old licensees abandon their hostile attitude.

11. The following table shows the despatches of salt from Calcutta into the interior by the different water-routes and railways during the past two years as registered at the salt stations and railway termini:—

YEAR.	*Viâ* Bali Khal.	*Viâ* Saukrail.	*Viâ* Gewankhally.	*Viâ* Kidderpore.	*Viâ* Balliaghatta.	Total carried by water.	By the East Indian Railway.	By the Eastern Bengal and Calcutta and South-Eastern Railways or *viâ* Chitpore.	*Viâ* Buthtolla ghât.	Total carried by rail.	GRAND TOTAL.
	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
1889-90	10,26,288	5,32,651	2,45,352	2,97,220	17,00,557	38,02,068	35,42,102	9,82,780	9,666	45,34,608	83,36,076
1890-91	9,60,117	5,03,958	2,57,041	3,81,811	14,76,553	35,79,480	32,33,581	12,73,620	4,973	45,12,234	80,91,714
Increase	...	...	11,689	84,591	..	..		2,91,840	..	.	.
Decrease	66,171	28,693	..	..	2,24,004	2,22,588	3,08,521	...	4,693	22,374	2,44,362

It appears that there was a net decrease of 2,22,588 maunds in the quantity of salt conveyed by water, and of 22,374 maunds in the despatches by rail. This may possibly be due to the fact that the statement does not show the amount of salt taken to Orissa and the interior of the country both eastward and westward by steamers and flats which are not stopped at the salt pass stations. It is stated by the Board that the practice of exporting salt by steamer is gaining in popularity owing to its cheapness and the facilities it offers for loading and unloading. The despatches of salt from Calcutta were probably also affected to some extent by the fact that the clearances from bond and ship-board at Chittagong for that district and Noakhally, Tipperah and Naraingunge show a net increase of 75,353 maunds. The figures given in the report offer no data for calculating the consumption of salt in Calcutta itself, and the area with the circle of salt stations immediately round the city.

12. Since the extension of the Indian Salt Act to Calcutta and its Suburbs, the untaxed consumption of *puckwa* or salt educed in the manufacture and refinement of saltpetre, and the adulteration of common salt with it, have suffered a check. The importation of the article into Calcutta and its Suburbs has been prohibited.

13. Mr. Kilby's scales for the weighment of salt have been exclusively in use in the port of Calcutta since July 1890. The Collector reports that the working of these scales has been completely satisfactory. The usefulness of the scales having been established in Calcutta, they were introduced into the port of Chittagong during the year. The system of weighment of salt by licensed weighmen has been in force in Calcutta throughout the year, and is said to have worked satisfactorily.

14. No explanation is given in the Board's report of the increase in the Provincial expenditure on salaries, establishments and contingencies, from Rs. 46,521 to Rs. 68,269. Such an explanation should be given in future reports, and a tabular statement should be appended showing the details of the charges, as nothing requires more careful watching than the insidious growth of expenditure on establishments. It is possible, however, that most of the increase may be due to the purchase of Mr. Kilby's scales.

15. The favourable notice recorded of Mr. Kilby's services as Superintendent of the Sulkea Salt Golahs will be communicated to the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Offg. Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 10th October 1891.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.		*Western Districts.*		
BURDWAN DIVN.	1	Burdwan Oct. 10, '91 Culna ... Cutwa ... Raneegunge ...	0·45 Nil 0·60 0·85	Weather—hot and dry. Paddy suffering much from want of rain. If it does not come, the crop will be poor. Sugarcane and other crops doing well. Supply of fodder sufficient. Prices of common rice :— Srs. Burdwan ... ... 16¾ Culna ... ... 14 Cutwa ... ... $15\frac{11}{16}$ Raneegunge ... ... 15½ } per rupee.
	2	Bankoora „ 10, '91	0·20	Weather—seasonable. Harvesting of *aus* nearly finished. Prospect of *aman* fair. Rain very much wanted. Preparation of field for cold weather crops going on in places. No cattle-disease reported. Fodder and water sufficient. Prices stationary.
	3	Birbhum „ 10, '91 Rampore Haut ...	0·55 2·73	Rain in north of district has done very much good. Rice crop on the whole is good. Price of rice 16 to 18 seers per rupee. Fodder and water plentiful.
	4	Midnapur „ 10, '91	...	Weather—seasonable. Prospects of crops continue fair. Rain wanted for paddy on high land. Prices of common rice :— Srs. Sudder ... ... 18 Contai ... ... 20 Tumluk ... ... 16 Ghatal ... ... 16 } per rupee.
	5	Hooghly „ 10, '91 Serampore ... Jehanabad ...	Nil Nil 0·02	Weather—warm partially. State of crop satisfactory on the whole. No rain. Prices of common rice :— Srs. Sudder ... ... 12½ Serampore ... ... 13 Jehanabad ... ... 16 } per rupee.
	6	Howrah „ 10, '91 Uluberia ...	0·06 Nil	Weather—generally fine. Prospects of *aman* and sugarcane crops satisfactory. Price of common rice 14 seers per rupee. Health of cattle good. Fodder and water-supply adequate.
		Central Districts.		
PRESIDENCY DIVN.	7	24-Perghs. Oct. 13, '91	0·06	Weather—seasonable. Clear and dry. Harvesting of *aus* and jute nearly completed. *Aman* suffering from drought. Sugarcane doing well, but more rain is wanted on high lands. Cattle-disease reported to prevail in thana Harwa in Bussirhat subdivision. Prices stationary.
	8	Nuddea „ 10, '91 Kushtea ... Meherpur ... Chuadanga ... Ranaghat ...	1·11 0·07 0·55 0·82 0·27	Weather—seasonable. *Aman* paddy requires rain. Sowing of cold weather crops going on. *Kalai, til,* and mustard in some parts of Kushtea subdivision reported to be destroyed by a fresh rise of the river. Condition of cattle good and supply of fodder and water ample.
	9	Khoolna „ 10, '91 Bagirhat ... Satkhira ...	0·10 0·50 0·31	Weather—fine and clear; much cooler during the last two days. Prospects of *aman* fair. More rain is desirable. Fodder and water sufficient.
	10	Jessore „ 10, '91 Jhenidah ... Magura ... Narail ... Bongong ...	0·04 1·59 2·50 0·02 0·40	Weather—hot. More rain wanted for *aman*. Sowing of indigo in progress in Magura and Jhenidah subdivisions. Price of rice stationary. Condition of cattle good; fodder sufficient.
	11	Murshedabad ...	...	Report not received.
RAJSHAHYE DIVN.	12	Dinagepur Oct. 10, '91 Thakurgaon ...	0·35 1·33	Weather—seasonable. More rain urgently wanted for winter rice. Prospects of other crops fair. Cultivation of *rabi* going on in some places. Rice selling both at Sudder and Thakurgaon 13 seers per rupee. Condition of cattle good. Supply of fodder and drinking water ample.
	13	Rajshahye „ 10, '91 Nattore ... Nowgong ...	Figures not received. 1·70 0·05	Weather—hot, but cool in the morning and evening. *Aman* is suffering badly everywhere for want of heavy rain. Fodder and water-supply ample. No cattle-disease reported.
	14	Rungpur „ 10, '91	Nil	Weather—hot during the day. Mornings and evenings cool. Good rainfall everywhere at the end of last week, except in the neighbourhood of Nilphamari. Prospects of winter rice much improved, especially in the *kheor* lands to the south and west. Sugarcane doing well. Preparation for tobacco and potato sowings in progress. Fodder plentiful.

	No	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*				
		Central Districts—concld.		
RAJSHAHYE DIVN—*concld.*	15	Bogra Oct. 10, '91	1·00	Weather—generally fine. Days hot and nights cool. Rain much wanted. Transplantation of *aman* almost finished. Ploughing for cold-weather crops going on. No want of fodder and water. Condition of cattle very good. Common rice selling at 15 seers per rupee.
		Shorpur ...	1·80	
		Nowkhilla ...	1·76	
	16	Pubna „ 10, '91	0·46	Weather—seasonable and cool. Prospect of *aman* still unfavourable. Rivers rising again a little. Fodder sufficient. No cattle-disease.
	17	Darjeeling „ 10, '91	0·54	Weather—fair. *Bhadoi* rice has been cut. Rain wanted for *haimanti* rice. *Marua* getting ripe. Sufficient fodder and water-supply for cattle at present.
	18	Julpigoree „ 10, '91	0·07	Weather—hot during day, cold at night. Prospect of *haimanti* paddy not good. Price of rice rising. Fodder and water-supply sufficient. Condition o cattle good.
		Eastern Districts.		
DACCA DIVN.	19	Dacca Oct. 10, '91	Figures not received.	Weather—seasonable. Prospects of *aman* paddy promising. *Kalai* and *mug* are being sown. Fodder is available. Common rice sold at from 13 to 16 seers per rupee. Condition of cattle good.
	20	Furreedpur „ 10, '91	1·5	Weather—seasonable. Prospect of standing crops good, excepting that of high land paddy, which has withered for want of sufficient rain. Price of rice stationary. No cattle-disease.
	21	Backergunge „ 10, '91	0·64	Weather—seasonable: days hot, nights cool, and mornings foggy. State and prospects of crops good. Rain much wanted. Price of rice stationary. Fodder and water plentiful.
		Perozepore ...	0·49	
		Patuakhali ...	1·27	
		Bhola .	0·20	
	22	Mymensingh „ 10, '91	3·30	Weather—cloudy and rainy at the beginning of the week, but clear towards the end. Recent rain has done much good to standing crops. Coarse rice selling at 14 seers per rupee. Supply of fodder and water sufficient. Condition of cattle good.
CHITTAGONG DIVN.	23	Chittagong „ 10, '91	1·49	Weather—seasonable. Harvesting of *aus* nearly completed. Rain wanted in some places for *aman* crop. Condition of cattle and fodder generally good. Prices stationary.
	24	Noakhally ...	...	Report not received.
	25	Tipperah „ 10, '91	0·40	Weather—seasonable. Rain wanted in high lands. Jute market brisk. Price of rice slightly rising. Fodder sufficient in some parts of the district, deficient in others. No cattle-disease.
	26	Chittagong Hill Tracts. „ 8, '91	0·85	Weather—hot, with foggy mornings. Harvesting of *jum* paddy continues. Paddy on low lands progressing. Lands are being ploughed for mustard and other cold-weather crops. Common rice is being sold at 12¼ seers per rupee.
BEHAR.				
PATNA DIVN.	27	Patna „ 10, '91	1·26	Weather—hot and dry; cool at night; west wind prevalent. Recent rain has done much benefit to standing paddy crop, and has facilitated preparation of *rabi* fields, but still more rain wanted. Prices generally stationary.
		Behar ...	1·10	
		Dinapore ...	0·30	
		Hilsa ...	0·74	
	28	Gya „ 10, '91	Nil	Weather-mornings cool, days hot. Prospect of paddy crop poor. Rain wanted everywhere. Prices of food-grains almost stationary. Supply of fodder and water for cattle sufficient.
	29	Shahabad „ 10, '91	Nil	Weather—days warm, nights cool. Sky clear. The rain reported from subdivisions fell on 3rd instant. Since then no rain. Prospects of paddy in Arrah and parts of Sasseram and Buxar are very fair, but in Bhabuah, in absence of rain, the crop is withering. Lands are being prepared for *rabi*, but there is not sufficient moisture at present in Bhabuah for sowing. Prices stationary.
		Buxar ...	1·02	
		Sasseram ...	C·77	
	30	Durbhunga „ 10, '91	0·99	Weather—bright, with west winds. *Bhadoi* harvesting over. In Sudder and Madhubani condition of paddy crop fairly good, except in portions of thana Bohera, where on high lands the yield will be probably poor. Hopeful reports come from Somastipur. Prices stationary everywhere in the district. Water and fodder sufficient. No cattle-disease.
		Somastipur ...	0·17	
		Madhubani ...	1·59	

No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR—*concld.*				
Patna Divn.—concld.				
31	Mozufferpur	Oct. 10, '91	Nil	Weather—rainless, with westerly winds. In Sudder and Hajipur subdivisions prospects of paddy crop unfavourable for want of heavy rain. In Sitamarhi subdivision rain of the week has done immense good, especially in the north. Outturn of rice crop may be estimated at 10 annas throughout the subdivision. Preparation of indigo and *rabi* lands in full swing. No deficiency of fodder and water for cattle. Cattle in good condition.
	Sitamarhi	...	2·44	
	Hajipur	...	0 42	
32	Sarun	" 10, '91	0·19	Weather—cool nights and mornings. Clear up to 9th; since then somewhat cloudy. Except in Gopalgunge subdivision, rain is much wanted for rice crop. Water and fodder for cattle sufficient.
33	Chumparun	" 10, '91	Nil	Weather—seasonable. *Bhadoi* crops are being reaped. Prospect of *aghani* good. Lands are being prepared for *rabi* crops. Fodder and water for cattle sufficient. Prices falling to some extent.
Bhagulpore Divn.				
34	Monghyr	" 10, '91	1·76	Rain on Sunday (4th October). Since then weather cool with westerly winds. The rain has much improved prospects in all places to which it has extended. The fall was partial and insufficient in the Jamui subdivision and parts of the Sudder. Prospects of rice are best in Khurrukpur, and worst in Surujgurha and Bukhtiarpur. Ploughing for *rabi* sowings is going on everywhere. Condition of cattle good. Supply of fodder and water sufficient.
	Beguserai	...	1·66	
	Jamui	...	0·80	
35	Bhagulpore	" 10, '91	Nil	Weather—days hot and nights cool. Rain badly wanted throughout the district. In Soopool prospects of *aghani* crop are not favourable. If there is no rain soon, there is danger of failure of crop. Price of rice stationary.
36	Purneah	" 10, '91	0·25	Weather—cool in the morning and evening, but warm during the day. In Arrareah and Kishengunge the standing paddy is doing well, but in Sudder it is suffering for want of rain. In Arrareah sowing of *rabi* has commenced; elsewhere the ground is being prepared for it. Fodder and water for cattle plentiful. No cattle-disease.
	Kishengunge	...	0·11	
	Arrareah	...	1·62	
37	Maldah	" 10, '91	0·80	Weather—hot in the beginning of the week; now getting cool at night. Winter rice thriving, but requires more rain. *Kalai* sowing nearly finished. Indigo sowing commenced. Preparation is being made for sowing of other *rabi* crops. Condition of cattle good. Fodder and water-supply sufficient. Price of rice stationary.
	Chanchal	...	0·82	
	Shibgurge	...	2 57	
	Gajole	...	2 42	
38	Sonthal Perghs.	" 10, 91	0 32	Wind has gone round to north; air cool, but hot in day. Some good showers fell. Rain has done much good to rice crop, and the urgent need is over. More rain is however wanted. Prospects generally good. Fodder and water-supply sufficient. Cattle healthy.
ORISSA.				
Orissa Divn.				
39	Cuttack	" 10, '91	0·05	Weather—fair. Harvesting of *beali* nearly over; outturn estimated at 12 annas. Transplantation and weeding of *sarad* also over. Some damage said to have been done to the crops on low lands by high floods and heavy rain. Condition of cattle good. Fodder-supply sufficient.
40	Pooree	" 8, '91	Nil	Weather—seasonable. Weeding of winter rice (*sarad*) still continues. Early rice is being harvested with an average outturn of 10 annas. Price of common rice stationary. Cattle-disease reported from Dandimal in Khoorda.
41	Balasore	" 10, '91	0·02	Weather—seasonable. Prospects of winter rice and other crops are good.
CHOTA NAGPORE				
South-West Frontier Agency.				
Chota Nagpore Divn.				
42	Hazaribagh	Oct. 10, '91	Nil	Weather—bright and fresh. Rice prospects good; would have been better for more rain this month. Cultivation of *rabi* in progress.
	Giridih	...	0·12	
43	Lohardugga	" 10, '91	0·07	Weather—cloudy. Harvesting of *gora* rice continues. Prospect of winter rice favourable. Rain wanted for this crop. Fodder and water plentiful.
44	Singbhoom	" 10, '91	0·20	Cold weather setting in. *Gora* paddy, *kheri*, and *goondli* are being harvested; 16 annas' outturn expected. Winter rice crop in excellent condition; a bumper outturn expected. Price of rice stationary. Cattle-pox reported from one village in pergunnah Dalbhoom.
45	Manbhoom	" 10, '91	Nil	Mornings and evenings getting chilly. General condition of crops all round satisfactory. Another shower of rain would be very beneficial. Supply of fodder sufficient. Rice selling at from 13 to 20 seers per rupee.
	Govindpur	...	0·27

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ... The *humidity* of the atmosphere is expressed at percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the arithmetical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 10th of October 1891.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. RAINFALL. Of week. Mean for district.	Of week. Normal mean. Explanation.—..... indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 13*th October* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING SATURDAY THE 10TH OF OCTOBER 1891.

DURING the first two days of the week the disturbed conditions, which followed the filling up of the depression mentioned in the reports of the two previous weeks, prevailed in Bengal, and gradually passed off towards the east. General rain fell, especially in the northern and central districts, and temperature, owing to this general rainfall, was below the normal by about 2° in Behar and more than 6° at Rungpore and Dinagepore. Pressure was everywhere above the normal, and the rise, which set in, commenced in the west of Behar on the 4th, the first day of the present week, and gradually spread over the province, brought excess up to a tenth of an inch, and altogether altered the distribution. At first highest pressure was in the south of the Bay and lowest in Behar and North Bengal, but on the 5th the distribution was more uniform, and on the 6th the readings at Dehree and Hazaribagh were higher than at any of the stations in Bengal or on the coast. The wind circulation altered with the baric gradients and from being in the ordinary monsoon directions at the beginning of the week, by the 7th light westerly winds were blowing in Behar and northerly winds in Lower Bengal. Rainfall was very scattered on the 5th, being confined chiefly to the eastern districts, and had almost entirely ceased on the 6th Temperature then began to rise, and on the 6th there was defect at eastern stations only. Thus by the 6th settled conditions prevailed over the whole province, skies were almost cloudless, and rain had practically ceased to fall. The distribution of pressure which then obtained continued till the end of the week, and wind directions were west or north-west in the western half of the province and north or north-east in East and South-West Bengal. Pressure at times was relatively low in North Bengal and the east of Assam, causing south-westerly winds in parts of these districts, but owing to the uniformity of the pressure distribution very light, and at times variable, winds prevailed in all the northern districts. The most important change of the latter part of the week was the steady fall of humidity and till the 9th of temperature, comparatively cool dry weather prevailing, especially in Behar and North Bengal.

Pressure has been everywhere above the normal throughout the week, at first by about ·05″, except in the extreme east, where excess was about ·1″. A brisk rise prevailed on the 5th, and excess then became more than ·1″ in the north of the Bay and over the province, except close to the foot of the hills, where, however, it was just under that amount. Small irregular changes followed on the 6th, and a slow fall set in on the 7th, continuing on the 8th, after which there was a general slow rise till the end of the week. Means are largely above the normal at all stations except Darjeeling and Sibsagar, where excess is ·03″. Elsewhere the difference from the normal is about ·08″, but at a few scattered stations slightly exceeds ·1″.

Temperature has been generally below the normal, especially in the northern districts, at first because of the general rainfall, and later owing to the establishment of cold weather conditions with westerly or northerly winds over the greater part of the province. Defect averaged 2° in Behar on the 4th and was large at some of the stations in the centre of North Bengal. On the 5th low temperatures prevailed only in North Bengal, East Bengal, and Assam, and on the 6th at the extreme eastern stations only. On the 7th temperature again began to fall in the nothern districts, the change becoming general over the province on the 8th and averaging 2° in Behar. On the 9th the fall was generally between 1° and 2°, and defect was between 3° and 4° in North Behar and part of North Bengal; but on the 10th the fall was not so general, and was more than 1° at scattered stations only. The means for the large divisions are generally below the normal. Defect is 2° in North Behar, 1·7° in Assam, 1·1° in North Bengal. ·9° in East Bengal, and 8° in South Behar. There is a small excess in Orissa and Chutia Nagpur, and the mean for Orissa is normal

Rainfall.—Fairly general rain fell on the first day of the week in all districts, except Orissa and North Bengal, and numerous showers, very variable in amount, in the eastern districts on the following day, the heavy falls on the latter being in the north of South-West Bengal and in the Pubna, Bogra, Rajshahye, and Rungpore districts of North Bengal. After the 5th rain almost ceased, scattered showers only being received in Chutia Nagpur, South-West Bengal. and North Bengal. The heaviest falls on the 4th were Rungpore 5·15 inches Serajgunge 3·45 inches, Netrokona and Ulipore 3 inches, Durgapore. Gajol, Sibganj, and Bhawaniguuge more than 2 inches. On the 5th Joydebpore received 4·8 inches; Ramchandrapore. Kishoregunge, Magoora, and Mymensingh between 2 and 3 inches; and Nowkhilla and Jhenidah 1·5 inches. The mean fall for Chutia Nagpur is ·1 inch, Orissa ·15 inch, North Behar ·05 inch, South-West Bengal ·47 inch, South Behar ·7 inch, East and North Bengal 1·14 inches. There is a small excess in North Bengal, but defect is large in all the other districts, varying from ·33 inch in South Behar to 1·51 inches in Orissa.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 10th of October 1891 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1891.

The average vapour tension of September from 9 years' registers	0·987		
The mean cloud proportion of the month	6·68		
The average cloud proportion of September from 14 years' registers	7·06		
The total rainfall of the month	9·25		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	9·13		
The average fall of September from 48 years' registers ...	10·18		
The greatest fall in 24 hours	1·34	11th	
	Days.		
The number of rainy days in the month	26		
The average number of rainy days in September from 24 years' registers	21		
	ϴ		
The mean maximum equilibrium temperature of solar radiation during the month	144·4		
The mean difference of sun and air temperatures	57·5		
The greatest sun temperature	156·2	14th & 16th	
The greatest excess of sun over air temperature	68·2	5th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	76·0		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	1·9		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	3·5	30th	
	Miles.		
The mean movement of the wind per day	111·8		
The greatest movement of the wind in one day	191·0	18th	
The greatest movement of the wind in one hour	18·0	22nd, noon to 1 P.M.	

The number of hours with winds from each of the 8 points—

N. 11, N.E. 31, E. 183, S.E. 204, S. 138, S.W. 113, W. 10, N.W. 11, Calm 19.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently equal; and finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

C. LITTLE,

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended *four feet* above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

t, thunder; p, passing temporary showers; [dew symbol], dew.

* Includes 14,989 tons carried for Revenue, for which no "Up" and "Down" register maintained.
† Ditto 12,529 ditto ditto ditto.
‡ Railway plant and rolling stock 9,713 tons and 10,985 tons for the year 1891 and 1890 respectively, for which no "up and down" register maintained.

Statement of principal commodities carried over the Eastern Bengal State Railway during the month of July 1891.

INCREASES.

	Tons.		Tons.
Coal	1,600	Salt	1,288
For railway and flotilla consumption.		Large despatches from Chitpore.	
Kerosine oil	1,575	Tea	2,795
Due to opening of Budge-Budge Branch.		Good season.	
Oil-seeds	1,310		
Good crops and an improved market.			

DECREASES.

	Tons.
Jute	13,084
The decrease was in despatches from Serajgunge, Goalundo, Pachooria, Pangsa and principal Jute booking stations on the Northern Section, and is said to be due to the uncertain nature of the crop and its backward condition.	
Railway plant and rolling stock	1,272
Probably due to lesser repairs and renewals.	

P. D. BARCLAY,
Traffic Superintendent.

CALCUTTA, *the 28th September* 1891.

RESOLUTION ON THE REPORT OF THE COMMITTEE FOR THE MANAGEMENT OF THE CALCUTTA ZOOLOGICAL GARDENS FOR THE YEAR 1890-91.

REVENUE DEPARTMENT—MISCELLANEOUS (F).

Darjeeling, the 2nd October 1891.

RESOLUTION No. 558T—R.

READ—

The Report of the Honorary Committee for the Management of the Calcutta Zoological Gardens for the year 1890-91.

The Lieutenant-Governor is glad to observe in the report now submitted a decided improvement in the financial position of the gardens as compared with the previous year, the total receipts having amounted to Rs. 42,960 as against Rs. 37,630, while the expenditure decreased from Rs. 46,285 to Rs.35,330. The result was an increase in the closing balance at the credit of the Society from Rs. 2,624 to Rs. 7,620. The increased receipts were chiefly due to a larger number of visitors owing to the bathing ceremony in connection with the *Ardhodya Yoga* and to an unexplained rise in the rents realised from Rs. 1,355 in the previous year to Rs. 2,305. The reduction in expenditure under the heads of repairs and construction alone amounted to over Rs. 10,000.

2. The number of visitors who were admitted to the gardens amounted to 136,410, exclusive of a considerable number of students and children admitted free of charge. This shows an increase of 26,841 as against the previous year, the chief cause of which has been explained above.

3. Altogether 227 additions were made to the collections (viz. 124 birds, 85 mammals, and 18 reptiles), of which 18 were born in the gardens, and the rest obtained either by presentation or by purchase or exchange. Among the more important acquisitions were a Greater Bird of Paradise presented by His Highness the Maharaja of Doomraon, a pair of Ursine Dasyure from Melbourne, a Hairy Tapir from Columbia, and a trans-Indus Markhoor from the Political Officer at Khyber. This last animal was sent to the Zoological Society's Gardens in London, as the climate of Bengal was not likely to suit it.

4. The thanks of the Lieutenant-Governor are due to the Committee of Management and to their Honorary Secretary, Dr. D. D. Cunningham, for the labour which they have bestowed on the management of the gardens during the year.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

RESOLUTION ON THE REPORT OF THE BOARD OF REVENUE ON WARDS' AND ATTACHED ESTATES IN THE LOWER PROVINCES FOR THE YEAR 1890-91.

REVENUE DEPARTMENT—LAND REVENUE.

Dated Darjeeling, the 16th October 1891.

RESOLUTION No. 724 T.R.

READ—

The Report of the Board of Revenue on Wards' and Attached Estates in the Lower Provinces for the year 1890-91.

Preliminary.

The Board's report, due on the 31st August, was issued from the press on that date, and such punctuality deserves favourable notice. The Commissioners' reports, due to the Board on 1st July, were all received by the 7th July, except two; that for Rajshahye was not received by the Board till the 10th July, that for Orissa on the 14th idem, and the supplementary report for the Burdwan Raj Estate, due on the 10th July, not until the 18th. His Honour trusts that such delays as are noticed in these three cases will not occur again. So far as they are caused by dilatoriness in the managers' offices, they reflect unfavourably on the management. Sir Charles Elliott has observed with pleasure the excellence of the form of the Board's report, which follows the plan adopted for the first time in the preparation of the report for 1887-88.

Collections.

2. The number of private estates under the management of the Board has decreased from 157 in 1887-88 to 139 in the year under review. Of the 139, 69 were Wards' estates and 70 were attached, encumbered and trust estates. The arrear demand of the revenue and cesses due to Government amounted to only Rs. 19,816; the current demand was Rs. 52,67,747: of these amounts Rs. 51,84,695 were paid. The Lieutenant-Governor desires that the form contained in the Board's paragraph 4 may be improved by adding a column to show the total demand, sub-dividing the column "Payments" into (*a*) arrear, and (*b*) current, and showing in a new column the percentage of current collections on current demand. The balances, Rs. 28,177, were comparatively small, though higher than the previous year. The excuse of want of funds should not be accepted. Nearly half this amount, viz., Rs. 13,401, was due from the Syudpore Trust Estate in Khulna. As the collections amounted to Rs. 1,80,120, and the Government demand is Rs. 1,12,517, it is not understood why the Government revenue was not fully paid within the year. If the money was diverted to the other objects of the Trust Fund, it should be remembered that the Government revenue has the first claim on an estate, and must always be first satisfied. The collections of rent and cesses due to superior landlords exceeded the current demand, and the balances on these accounts were less than last year. Still the

amount, Rs. 43,473, is considerable, being over 10 per cent. of the current demand. His Honour does not understand why these balances should appear at all, and why they are not paid into Court, leaving the claimants to settle their own affairs. The important work, however, of the managers of Wards' estates consists in the collections of rent and cesses due to the estates. The figures for the past five years are exhibited in the following statement:—

YEAR.	Arrear demand.	Current demand.	Collections.	Percentage of collections on current demand.	Remissions.	Balances.
1	2	3	4	5	6	7
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1886-87	81,67,509	1,02,96,569	(a)96,80,751	94·0	3,00,426	84,84,423
1887-88	1,16,36,922	1,02,46,459	(b)99,81,714	97·4	2,15,827	1,16,96,615
1888-89	1,12,89,022	1,03,44,565	(c)97,18,391	93·9	10,70,426	1,08,42,802
1889-90	1,08,46,289	1,00,15,159	(d)1,02,89,887	102·7	24,52,188	81,84,669
1890-91	79,81,432	98,29,588	(e)96,35,714	98·0	7,57,403	74 24,535

(a) and (b) includes advance collections of Rs 10,775 and Rs. 1,532 respectively.
(c) excludes, after adjustment, advance collections of Rs. 1,958.
(d) includes advance collections of Rs. 65,296.
(e) includes advance collections of Rs. 6,632.

The apparently satisfactory ratio of 98 per cent. collected on the current demand conveys an erroneous impression from the fact that this is a comparison of total collections with current demand. There should be a revision of the columns to show the total demand, the percentage of total collections on total demand, and the percentage of current collections on current demand. It is not creditable that the collections of the year should not even equal the current demand, and it is only by extensive remissions that the balances have decreased as they have. The failure to collect properly is most conspicuous in the Patna and Orissa Divisions. The remissions, large as they are, Rs. 7,57,403, might apparently have well been larger, as, of the enormous balances amounting to Rs. 74,24,535, some 16 lakhs of rupees are classified as irrecoverable, 2¾ lakhs doubtful and disputed, over 4 lakhs doubtful but not disputed, and 50 lakhs, *i.e.*, about two-thirds of the total balances, are good and in process of recovery. The Lieutenant-Governor can only repeat what has often been previously said, that every effort should be made to realise such amounts as are likely to be recovered, and the bad debts remitted. It has not been explained why the balances due in the Deo and Dhalbhum estates increased in the course of the year.

Management.

3. The actual cost of management, *i.e.*, including the managers' pay, establishment, travelling allowances, and contingencies, amounted to Rs. 7,36,616, or 7·4 per cent. on the current rent and cess demand of the estates. This is almost the same as the percentage of the previous two years. The total charges, including the amount spent on survey and settlement and the construction and repairs of cutcherry buildings, came to Rs. 8,91,547, or 9·0 per cent. on the same demand. The management charges proper are very high in the Dacca and Bhagulpore Divisions and have increased in Orissa. The survey and settlement charges were reduced, some of the principal operations having been completed. There was a slight excess of the charges of the year over the receipts, and the surplus to the credit of the general management rate stood at the end of the year at Rs. 79,607. The Lieutenant-Governor has submitted to the Government of India proposals for the levy of a proper charge for the supervision of the Court of Wards' affairs, which take up a serious proportion of the time of the higher revenue authorities. A revised set of instructions has been issued with a view to provide for the audits of the accounts of important estates, by the Examiner of Local Accounts and his staff, being made shorter and at more frequent intervals; and steps have been taken to have the monthly audits of all estates carried out regularly and thoroughly.

4. The main financial results of the year in all the estates taken collectively were as follows:—

Financial results.

		Rs.
Receipts	Cash balance at end of 1889-90	15,93,296
	Collections of rents and cesses	96,35,714
	Debts recovered	1,48,125
	Miscellaneous	17,24,189
	Suspense account	13,06,135
	Total ...	1,28,14,163
	GRAND TOTAL ...	1,44,07,459
Disbursements	Revenue and cesses paid to Government ...	51,84,695
	Management and treasury rates paid to Government	81,351
	Rent and cesses due to superior landlords ...	4,63,847
	Management of property	8,91,547
	Law expenses	2,69,762
	Maintenance of the ward and his family, ceremonies, &c. ...	11,78,088
	Education of the ward	45,748
	Subscriptions to schools	59,241
	Ditto to dispensaries	32,255
	Repairs and up-keep of buildings	2,13,178
	Improvement of the Wards' Estates	58,404
	Other expenses	5,44,753
	Debts paid	15,94,281
	Investments	7,90,828
	Suspense account	12,22,718
	Total ...	1,26,30,696
Cash balance at end of 1890-91	... ...	17,76,763
	GRAND TOTAL ...	1,44,07,459

As the Board rightly remark, the figure shown under "Suspense account" is far too large; and the heading "Other expenses" should be broken up in future, so as to explain the nature of the large outlay debited to it.

There were still debts outstanding to the amount of Rs. 37,16,022 and Government securities and railway debentures were held to the value of Rs. 44,25,722.

5. In paragraphs 54-60 an interesting account is given of what has been done by the Court of Wards to manage and improve seven out of the eight estates which, after having been in its hands for several years, were released from management during 1890-91. The figures given in the report are compiled in the following table, but the same information is not given for all estates, and consequently all the columns cannot be filled up. In future this table should be included in the report, and an account should be given of all improvements which have been effected in the estates during the period they were under the Court's management:—

Estates released.

NAME OF ESTATE.	RENT-ROLL RAISED.		Total collections.	Debts due, including interest.	Debts paid off.	Improvements.	Surplus and cash balance at close.	REMARKS.
	From.	To.

The Lieutenant-Governor has noticed with dissatisfaction the small amounts spent throughout the surplus estates on survey and settlement, with the exception of Burdwan, Cossimbazar, Srinagar, Maldwar and Dakhin Shabazpore, in which large operations have been or are being undertaken. He would be glad to feel assured that no survey and settlement proceedings are necessary in the other estates mentioned, or in any of the long list in the Appendix to the Board's Report. He regards it as essential to good management in wards' or other private estates, as much as in the case of Government estates, that the rent-roll should be carefully prepared, accessible, and accurately maintained. With regard to improvements, the Lieutenant-Governor considers that much more might have been done in estates not heavily encumbered with debt than was done in the last or in preceding years, without falling into the opposite extreme of making experiments, which are rightly objected to in Rule 22 on page 39 of the Wards' Manual. He is aware that in some estates large sums have been spent under the head of "Maintenance in efficient condition of estates, buildings and other immoveable property;" but having regard to the large cash balances and the Government securities exhibited in the above statement, he is distinctly of opinion that permanent improvements should have been, and should be, effected to a much greater extent. Sir Charles Elliott is glad that the Board have noticed the decrease of expenditure in this respect. There is time during the ensuing cold weather for considerable works to be undertaken if the necessary orders are issued without delay. In the opinion of His Honour the surplus estates ought also to show more expenditure under the heads of "Subscriptions to schools and dispensaries," "Investments" and "Suspense and cash balance," and the deficit estates more under "Debts paid."

Survey and settlement operations.

7. The Board have prepared from the Annual Report of the Director of Land Records and Agriculture the following statement to show the progress made in the surveys and preparation of records of rights in Wards' estates :—

Name of Estate.	Number of ryots.	Estimated area in acres.	Area surveyed.		Area of which survey records were made over to the Settlement Officers.	Number of ryots whose rents had been recorded and status determined.	Cost up to 31st March 1891.		Rate of cost per acre.		Increase in rentals of tenants whose rents have been settled.	Remarks.

The final reports of the operations in the Shankarpur, Churaman and Maldwar estates have since been received, and Government orders have been issued. The Lieutenant-Governor awaits the Board's proposal to commence proceedings in the Talipabad estate ; the Jogearah estate may be postponed until the contemplated resumption of the Behar survey is taken in hand. *Primâ facie* every ward's estate should be brought under survey and settlement, but those which have already accurate records and rent-rolls, or are deeply involved, or likely soon to pass out of the hands of the Court of Wards, may reasonably be excepted. He trusts that the rules for the maintenance of the settlements records which the Board have issued will be duly observed, but he recognises that there is no guarantee, save the good sense of the proprietors, that they will be regarded after the estates have reverted to their management.

Certificate procedure.

8. During the year under report 10,175 certificates were filed, so that, inclusive of those pending from last year, there were 32,142 certificates for disposal. These numbers are the lowest for the last three years, and, as 18,438 were disposed of, the balance has been reduced to 13,704 cases pending. The Board consider that the number disposed of during the year should have been larger, and apparently attribute the delay in dealing with these cases to the inaction of the certificate officers. The Lieutenant-Governor has recently suggested a revision of one of the certificate registers with a view to keeping a closer watch over the disposal of certificate cases when they have reached the certificate officer's hands, but he is inclined to think that in wards' cases the responsibility for watching their progress and realizing the demands as soon as possible should lie on the managers of the estates. He has grave objections to the practice, which he understands that managers sometimes adopt, of filing a large number of certificates which they keep hanging over the heads of defaulters without proceeding with them. He considers that for each estate the returns should show the mode of recovery at each stage, how many notices were successful, how many attachments were required, &c. In fact he would wish the statement furnished by the Board of the operation of the certificate procedure to be considerably enlarged by the addition of such columns as are contained

in paragraph 75 of their Report on the Land Revenue Administration for 1890-91.

The question of the applicability of the certificate procedure to demands on account of the Court of Wards is now under consideration, and the answer would appear to turn mainly on the point whether the demands can be ascertained easily and accurately by reference to records kept with the regularity of public records. The Board's executive rules enjoin due care and discretion in the making of certificates, and declare them to be a suitable method of recovery only of demands of which the debtor was previously cognizant, and which he has neglected to pay in due course. To secure these objects it is essential that the rent rolls of estates should be properly framed and maintained. The Lieutenant-Governor is unable to state the case more clearly than it was put by the Government of India in their review of the Board's Wards' report for 1888-89, in the following words: "It would appear preferable that wherever possible the rents should be realized by ordinary means rather than by recourse to the direct and summary process of the certificate procedure, and that, where there is any uncertainty regarding the rent due, there may be serious difficulties in justifying the issue of certificates at all. If, then, as seems to be the case, the certificate process is essential to a satisfactory management of Wards' estates, another strong argument is supplied for the survey and record of rights, by which means alone perfect safety as to rents can be secured." These weighty remarks express what has already been said in some of the preceding paragraphs of this Resolution.

Condition of the tenantry.

9. The Board's opinion of the condition of the tenantry in the various estates is generally satisfactory and may be quoted as follows:—

"In the Burdwan Division the harvest was generally well up to the average, and the condition of the tenants was good, except in one or two parts of Midnapore, where they are stated to have had short crops for several years. The relations of the ryots with the managing agencies were also satisfactory, save in the Soojamoota estate, where the long-standing dispute with the Burdwan Raj had not been settled. In the Presidency Division the crops were favourable, except in tracts which suffered from the floods due to the breach in the Bhagiruthee embankment. In the Rajshahye Division the tenants on the three estates in Dinagepore were well off. In Rajshahye, Rungpore, and Jalpaiguri, however, much damage was done by floods, and this affected the condition of most of the ryots on the wards' estates. In the Dacca Division the tenants are everywhere prosperous, especially on the Dakhin Shahbazpur estate, where, as previously reported, the Collector thinks that there is not a poor man, and the harvests of the year were good, though probably somewhat less favourable than in the preceding year. The tenants are reported to be refractory in some villages, but with this exception there was no friction. In Chittagong the crops of the year are described as splendid. Few of the tenants are in debt. They sometimes borrow money, but repayment follows just after the harvest is gathered. Every encouragement is given to them to bring new lands under cultivation and to try new crops. In Noakhally also the tenants were prosperous. In the Patna Division the general condition of the tenants was one of average prosperity. In certain estates there were, it is stated, adverse circumstances which affected their condition, and symptoms of a disposition to withhold payment of rent manifested themselves. In Patna the rice crop was good, but both the *bhadui* and *rabi* crops suffered, the former from inundation, and the latter from rain and hailstorms in March. The tenantry throughout the district of Gya were in better circumstances than in the previous year, in consequence of more than ordinarily good outturn of the rice crop. In Tikari it is reported that the results of the expenditure on *gilandazi* or works of irrigation are showing themselves most markedly. Villages which had become almost depopulated are attracting settlers, and uncultivated wastes are giving place to well-irrigated and well-cultivated, richly productive areas. The tenants of the estate in the Chupra district, however, suffered severely from the destructive floods of the year. Collections had to be suspended and some relief has been given. In the Chumparun and Mozufferpore villages of the estate the tenants have shown disinclination to pay fair rents, and have combined with considerable success to prevent realisations under the certificate procedure. Measures have been taken to establish a better state of things in those villages. In Shahabad the condition of the tenants was tolerably good, but in one estate many of the higher castes having sublet their holdings at small profits are badly off, and are said to form a useless body of middlemen whose existence is harmful to the estate and the sub-tenants. In the Bhagulpore Division the condition of the tenants was, on the whole, prosperous. The tenantry in the wards' and encumbered estates of the Chota Nagpore Division generally enjoyed a year of prosperity and contentment, the only exception being in parts of the Lohardugga district. Much friction existed in six estates of that district, owing to the conversion of a large number of tenants to Christianity. In Orissa the condition of the tenantry was good on all estates, except in certain villages of Kanika and Kujang, which were visited by storm-waves causing considerable damage to the crops."

10. The Lieutenant-Governor has noticed the following points of interest in the narratives given in paragraphs 41 to 53 of the estates with a rent-roll of Rs. 50,000 and upwards. In Burdwan the remissions amounted to the enormous sum of Rs. 38,86,501, of which Rs. 3,83,614 only were the principal debt, the remainder representing costs and interest. The entire amount was long since barred by limitation. This is a remarkable instance of the way in which old debts are kept on zemindars' books. The Lieutenant-Governor does not understand why it should have been necessary for so wealthy an estate to take a loan to pay the Government revenue. The difficulties regarding the *abwabs* in the Tikari estate have several times come before Government. There is apparently nothing to be done until a final legal decision has been obtained. A special investigation has been made of the affairs of this estate, and His Honour joins with the Board in hoping that the orders issued will result in a marked improvement in the collections during the next year; if not, a change of manager might be desirable. The accumulations in the Dighapatia Estate amount now to 15¾ lakhs of rupees and are becoming too large, and some means should be devised for spending at least a portion of them for the permanent advantage of the estate. The Board have ordered Rs. 10,000 to be set aside annually for local improvements; they might well have directed the devotion of a larger sum to this object. In the Cossimbazar estate the rent-balances due to the estate exceeded the current demand, and were hardly reduced during the year; and while a sum of Rs. 1,74,985 was invested in Government securities, only Rs. 3,357 were spent on works of improvement. The Lieutenant-Governor does not object to the Board's rule that a ward should have, on attaining majority, a sufficiently large cash balance to relieve him of any temptation to press hardly upon his ryots or change the Court's system of management; but he shares the feeling which has often been expressed, that large cash balances or investments in Government securities should not be allowed to accumulate in an estate, as they create a great danger and offer a great temptation to the ward on his attaining majority. In the Narhan estate there is little time left for improvements, but anything that can be done should be expedited. Government are aware of the difficulties in the Bhowanipore estate, and observe that the irrecoverable balances are being cleared by extensive remissions. Between 3 or 4 lakhs are still outstanding, which should be scrutinized without delay. The Deo estate has received from Government a loan of four lakhs of rupees, by which, together with the sale of certain villages, the debt to the Maharaja of Darbhanga, its chief creditor, has been satisfied, and there will now be little difficulty in clearing off the remaining debts. The collections are greatly in arrear, and this is said to be mainly due to the fact that the estate was farmed to useless hangers-on of the Raja's family with no property. If this is the case, they should be sold out and a better class of men settled with. The cash balance at the close of the year was Rs. 45,639, a large sum to keep unutilised when there are debts on which interest is accruing. The figures given in connection with the Dhankura estate betoken bad management, to which the Board should direct their particular attention. The Lieutenant-Governor does not understand, in the case of Basudebpore, what is meant "by the non-acceptance by the estate of the settlement of the Jellamutta Julpai Chuck;" is a manager allowed to refuse a settlement which the Collector thinks adequate? It is not explained why only Rs. 18,000 were distributed to the proprietors of the Dakhin Shahbazpur estate, when a large cash balance was available: the sum distributed might apparently have been larger, due allowance still being made for improvements. An extensive settlement has been going on in the Dhalbhum Pergunnah of Singbhum, involving the complicated question of ghatwali tenures; a special report on the progress and character of this work has lately been received and will be separately noticed. The whole story of the management of this estate, as given in paragraph 42 of the report, and of the financial transactions connected with sales, mortgages and concessions for prospecting and mining leases, is too abbreviated to be intelligible. Certain small portions of the Government demand should have been paid in the Kanika and Sukraj Rai estates. In the latter it is not creditable that arrears of rent amounting to Rs. 31,420 have accrued during the Court's management. The account of the management of the Chandra Kumar estate is unsatisfactory. In the Chakma estate the authorities have performed a remarkable feat in liquidating debts up to

Miscellaneous.

Rs. 12,700 by means of an annual surplus of only Rs. 4,000, since the Court of Wards took charge on 17th October 1890. The management of the Supur estate in Bankura, released during the year, is a good instance of the benefits which an embarrassed estate may receive from judicious management. In the Silli estate, also released, a settlement had been made with the ryots by Mr. F. A. Slack, C.S., acting as Manager of the Estate: it is unfortunate that the powers conferred upon him did not enable him to carry it out in such a way as to avoid the disputes which are said now to have risen, and to require cautious and conciliatory treatment at the hands of the proprietors. It is very unsatisfactory that during the entire period of Government management only 64 per cent. of the demand was collected in the Satrakhani estate. Here, as in Dhalbhum, Silli, and elsewhere, special difficulties have arisen out of attempts to settle ghatwali tenures.

Managers.

11. The salient point which has struck the Lieutenant-Governor in reviewing this report is the very limited amount of success which the revenue authorities are able to attain in the way of effecting improvements in these estates. It is of course impossible for a Collector to acquire the minute local knowledge which is necessary in order to decide where wells, tanks, *bunds*, roads, markets, model villages, drainage-cuts, or other improvements should be undertaken, but this is all the more reason for insisting that the manager should acquire and utilize such knowledge. Where so much depends upon the managers, it is necessary that they should be chosen with great care, and their responsibility for good work clearly defined and maintained. Next year the names of the managers of all the estates in Part II should be given.

Encumbered estates.

12. His Honour has also noticed the absence from Part II of the report (which describes progress of management in the large estates) of any special mention of the encumbered estates of the Chota Nagpore Division, which are taken charge of under Act VI of 1876. They appear from the Appendix to the report to be very numerous. There is nothing said of them collectively, whereas in His Honour's opinion such an important political matter as the success attained in clearing those estates of debt requires to be reported on distinctly every year. The Board will be requested to devote a separate part of their report to these estates in future.

13. The Lieutenant-Governor desires to acknowledge the attention paid by Mr. Halliday to the important and difficult charge of the Court of Wards throughout the year. The names of the Commissioners, Collectors, and Managers, whose services are commended by the Board, will be duly communicated to the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg Secretary to the Govt. of Bengal.

TOURS OF INSPECTION BY REVENUE OFFICERS AND HEADS OF DEPARTMENTS UNDER THE GOVERNMENT OF BENGAL.

GENERAL DEPARTMENT—MISCELLANEOUS.

Dated Darjeeling, the 17th October 1891.

RESOLUTION—No. 398T—G.

READ again—

The following orders regarding Tours of Inspection of certain officers under the Government of Bengal:—

Letter from the Government of India, Home Department, No. 9—681, dated the 12th February 1868, regarding tours by the Sanitary Commissioner for Bengal.

This Government (General Department) Resolution, dated the 26th February 1872, regarding tours by the Director of Public Instruction.

Letter from the Government of India, Home Department, No. 92, dated the 2nd March 1891, and this Government (Municipal Department) letter to the Inspector-General of Civil Hospitals, Bengal, No. 770, dated the 20th July 1882, regarding tours by that officer.

This Government (Political Department) Resolution, dated the 5th November 1883, paragraph 19, regarding tours by the Inspector-General of Registration.

This Government (General Department) Resolution, dated the 21st April 1888, regarding tours by Sub-divisional Officers.

This Government (General Department) Circular No. 1, dated the 3rd January 1888, regarding tours by District Collectors.

The Revenue Officers' Manual, 1888, Section V(*b*) and Section VI(*b*), regarding tours by Commissioners of Divisions and District Officers respectively.

The Jail Code, Chapter II, paragraph 29, regarding tours by the Inspector-General of Jails.

The Police Manual, Volume I, Chapter I, paragraph 3, regarding tours by the Inspector-General of Police.

The Lieutenant-Governor has recently had occasion to examine the standing orders in force on the subject of the Tours of Inspection to be undertaken by all officers, administrative and executive, serving under this Government. He attaches the greatest importance to personal supervision and communication between the Heads of Departments and the Chief Executive Officers in the administration and their subordinates, and to close and minute inspection by them of all branches of the offices and of the work done by those subordinate officers. His Honour is accordingly pleased to lay down the following orders in supersession of all previous instructions on the subject of the duration and objects of tours.

2. *Members of the Board of Revenue.*—With regard to these high officers no precise rules need be laid down, but the Lieutenant-Governor has lately, in paragraph 36 of the Resolution dated the 6th October 1891, on the Board's Land Revenue Administration Report for the year 1890-91, expressed himself as follows on the subject of the inspections to be made by them:—

"He thinks that some system should be organized, by which the Members should either spend a definite portion of the year on tour, or should visit a specified number of districts in the year. It would be advantageous, both to themselves and to their subordinates, if they were to inspect Commissioners' offices on the revenue side, collectorates in all branches of revenue work, distilleries and survey and settlement operations as far as they are able. Sir Charles Elliott is aware that the Members of the Board have to hear important revenue appeals, and that they are responsible for correspondence in affairs of considerable moment. But he believes that the appeals can be fixed and heard according to arrangement, and he presumes that correspondence can be carried on and disposed of by the Members when on tour. One Member only would ordinarily be absent from Calcutta at a time, so that urgent matters could be disposed of by the Member at the Presidency. At any rate, the Lieutenant-Governor may safely say that he would welcome the co-operation of the Members of the Board in improving the mofussil revenue administration of the Province and assisting in the execution of the orders of Government."

Each opium agency should be visited once a year by the Member in charge of the Miscellaneous Revenue Department of the Board of Revenue.

3. *Commissioners of Divisions.*—All Commissioners should be on tour at least four months in every year, and spend at least a fortnight in each district, inspecting each year every Magistrate's and Collector's office in all its branches, every sub-divisional office, every registration office and dispensary at district or sub-divisional head-quarters, every jail, subsidiary jail or lock-up; also

every settlement mentioned in the settlement report of the Director of Land Records and Agriculture, which is under their orders, and, so far as possible, the summary unprofessional settlements of Government or temporarily-settled estates which are made by the district staff. They should pay special attention to the working of the Court Sub-Inspector's office, the regularity of attendance of Honorary Magistrates, the disposal of criminal cases by stipendiary Magistrates, the frequency of remands, the work of the record-room, the certificate department, the land acquisition department and the tauzi department.

The Commissioners of Orissa and Chota Nagpore should spend more than four months on tour, and should visit each Tributary State under them, if possible, each year, and at any rate once in two years. The tour of the Commissioner of Chittagong should always include a visit to the Lushai Hills. Tours should not be confined to the cold weather, but should be made in the rains also, especially in Eastern and Central Bengal, and wherever water communication is easy.

4. *District Magistrates and Collectors, and Deputy Commissioners.*—These officers, when in charge of large districts with many sub-divisions, should spend four months on tour annually; for small districts three months will suffice. They should inspect each sub-divisional office twice a year, looking especially into the working of the branches of work mentioned above. The rest of their tour time should be devoted to making acquaintance with the chief residents in the district and the state of administration in the mofussil as regards roads, embankments, water communications, markets, ferries, pounds, &c. They should visit each municipality once a year and inspect the municipal office, looking especially into the distribution of work among the Commissioners, the arrangements for registration of births and deaths and for sanitation, the assessment, collection and arrears of municipal taxes. They should inspect their own offices twice a year while at head-quarters, carefully examining the work in every branch. Their tours, like those of the Commissioners, should not be confined to the cold weather, but should be partly made during the rains.

The following is a list of the districts which are to be classed as large:—Burdwan, Midnapur, Nuddea, Jessore, Murshidabad, Rangpur, Dacca, Backerganj, Maimansingh, Patna, Gya, Shahabad, Bhagulpur, Santhal Pergunnahs, Hazaribagh, Lohardaga. The rest fall into the class of small districts for which three months is to be the minimum period of touring required annually In the 24-Pergunnahs the tour should be divided between the Collector and the Joint Magistrate, as it is impossible for the Collector to be absent for three months of the year from his head-quarters.

5 *Sub-divisional Officers.*—These officers should be on tour three months in the year, looking chiefly after the mofussil wants of the sub-division; they also should inspect their own office twice a year in every branch.

6. *Heads of Departments.*—All Heads of Departments should be on tour for at least four months in every year, and as much more as is necessary to carry out their inspection thoroughly and make themselves personally acquainted with their own staff, with the other officials with whom they and their staff come into contact, and with the chief native gentlemen of the province who may be interested in their department. No Head of Department (except the Conservator of Forests, for whom a special rule is framed) should remain at Darjeeling when the Head of the Government is not there, except by special permission and for urgent cause shown.

7. *Inspector-General of Police.*—One of the two Deputy Inspectors-General of Police should be located at Patna with charge of the western and northern districts of Bengal: the other will for the present have his head-quarters in Calcutta with charge of the eastern and southern portions of the Province. They should each be at leat six months on tour, and should each inspect fifteen districts in the year. The Inspector-General should inspect personally from ten to fifteen districts, and should also visit a few (say five) other districts in company with each Deputy Inspector, in order to see how he conducts the work of inspection. He and his Deputies should vary the area of inspection in each year, so that in the course of three or four years the Inspector-General will have personally and minutely inspected every district in the province once, besides making less prolonged visits to most of the districts in the company of the Deputy Inspectors-General. He should visit, beside the head-quarters, as many sub-divi-

sional stations and outlying thanas as he finds possible. But inspection of registers and office work is not the chief part of the Inspector-General's work when on tour. He should spend several days in each district, taking sufficient time to make the acquaintance of people whom it is useful for him to know, and to get a personal knowledge of local affairs of the officials with whom his police officers are in communication, and with the local leaders of native society. He should also acquire much information as to the topographical and racial peculiarities of the district, the criminal tribes, and the local tendency to particular classes of crime.

8. *Inspector-General of Jails.*—This officer should inspect every Central Jail yearly and every District Jail once in two years, and also as many subsidiary jails as possible, arranging his tours so as to visit each subsidiary jail once in three years.

9. *Inspector-General of Registration.*—*Mutatis mutandis*, the same remarks as in the case of the Inspector-General of Police apply to the Inspector-General of Registration, who should divide inspection work with his two Deputies on the same system. He ought also to know enough of the peculiarities of the Mahomedan population in different parts of the province to understand, and make suitable to their wants, the working of their marriage registration law, and to see that sufficient registration offices are created to meet the wants of all classes of the population.

10. *Director of Public Instruction.*—The Director has so many duties in connection with the University of Calcutta, that he has found it difficult to do as much inspection and touring work as he admits to be desirable; but the Lieutenant-Governor hopes that in future he will be able to spend 60 days of the cold weather in short journeys of inspection, besides the two months in the rains, about which it is hoped that there will be no great difficulty. He should inspect every College and Madrassa once a year, and should, as far as possible, spend some time with his different Inspectors and Joint and Assistant Inspectors, watching their work and guiding and teaching them, if necessary, from his own experience. But it is quite as important for him to keep himself *au courant* with the general progress of education throughout the country, and the growth of the desire for it, in order to judge when and where the time has come for Government to retire from the direct charge of instruction, and to make it over to private enterprise. It is necessary also for him, as for other Heads of Departments, to make acquaintance with his own officers and with those who have relations with his Department, to enquire into the working of the different systems of education as prevalent among different classes in different parts of the country, and to settle differences which may arise between his Department and the local authorities.

11. *Director of Land Records and Agriculture.*—This officer should spend six months of each year on tour. He should visit each important settlement in progress under a special officer once during the year, and such specially important ones as those of Orissa and Chittagong twice in the year. He should also inspect, in as many cases as possible, the unprofessional settlements in progress under District Officers in scattered Government estates, and try to teach them some method and order in the work which is now imperfectly done. He should remain about a week or more in company with each of the Settlement Officers of the major settlements, so as thoroughly to understand their views and their difficulties, and how they carry on the work, and to guide them, where necessary, into improved methods.

12. *Conservator of Forests.*—The Conservator should be on tour at least six months in the year, and should visit every Forest Division in the Province during the year. His own office being permanent at Darjeeling, the rule does not apply to him that he must not remain at Darjeeling when the Lieutenant-Governor is absent, but he should manage to spend six weeks during the rains on tour, either visiting the Sunderban Division, which is easily accessible during the rains, or else inspecting the head offices and the office work of his Divisional Officers.

13. *Excise Commissioner.*—The Excise Commissioner should spend five months of the year on tour, and should divide inspections with the Inspectors of Excise at Patna and Dacca, so as to visit himself every central distillery in the course of two years, and to see something of sub-divisional offices, spirit

depôts and licensed outstills or shops when they are within his reach. A part of each year's tour should be made in company with each of the Inspectors, so as to ascertain their method of inspecting and to guide them from his own experience.

14. *Inspector-General of Civil Hospitals.*—This officer should visit every dispensary at the head-quarters of a district at least once in two years, and as many outlying dispensaries as he conveniently can.

15. *Sanitary Commissioner.*—The Sanitary Commissioner should be at least six months on tour, and should visit every part of the Province in turn, directing his inspection chiefly to the sanitation of municipalities and the progress of vaccination work. He should also be ready at any time to visit any place where a severe epidemic of cholera or small-pox may occur.

16. Sir Charles Elliott hopes that these instructions will be strictly observed in future by the officers concerned, and His Honour directs that every Divisional Commissioner and every Head of a Department shall give in his administration report an account of the tours of inspection which he and the officers under him have made in the year, showing what places they have visited and what special matters have engaged their attention.

17. The Board of Revenue are requested to insert the changes required by this Resolution in their Revenue Officers' Manual for ready reference.

ORDER.—Ordered that this Resolution be published in the *Calcutta Gazette* for general information.

Ordered also that a copy be forwarded to the officers concerned for information and guidance; also that a copy be forwarded to the Board of Revenue, and to the Revenue, Judicial and Financial Departments of this Office, for information.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

RESOLUTION ON THE REPORT ON THE ADMINISTRATION OF THE EXCISE DEPARTMENT FOR THE YEAR 1890-91.

FINANCIAL DEPARTMENT—SEPARATE REVENUE.

Darjeeling, the 13th October 1891.

RESOLUTION No. 352T—F.

READ—

The Report of the Commissioner of Excise for 1890-91, with the observation of the Board of Revenue thereon.

Excise Commissioner.

Mr. E. V. Westmacott held the office of Excise Commissioner for the whole year, with the exception of the period from 1st April to 11th June 1890, during which he was absent on privilege leave and Mr. A. Forbes officiated for him. Mr. Westmacott and Mr. Forbes spent between them 111 days on tour, and visited 36 districts and 39 distilleries. This is an improvement on the proceedings of the preceding year, and it is satisfactory to find that by prolonging his tour after the close of the official year, Mr. Westmacott managed to visit all the distilleries except those in the Sonthal Pergunnahs. Two Inspectors of Excise have recently been appointed to assist the Excise Commissioner, and orders have been issued defining more precisely the amount of travelling which will be expected of them. The Lieutenant-Governor hopes that these arrangements will make it possible to effect more regular and systematic inspection during the current year. The record of the work done on tour, annexed to the report, is extremely meagre and conveys no information worth speaking of. It is understood, however, that careful inspection reports were drawn up and communicated to the local officers, and that in future reports an attempt will be made to bring out some of the main facts ascertained and conclusions suggested by the personal observations of the Excise Commissioner while engaged on this important branch of his duties.

2. The report is illustrated by six maps; one shows the incidence per head of the total excise revenue, four the revenue derived from four of the chief exciseable articles, country spirits, toddy, pachwai, and opium, and the sixth shows areas in which the systems of central distilleries and outstills prevail. In order to complete the series, it would be well to add a map illustrating the incidence of the revenue derived from the consumption of ganja.

Subordinate staff.

3. Including the Deputy Collector attached to the office of the Excise Commissioner as the Personal Assistant, 17 Deputy Collectors were employed in the Excise Department out of the 21 whose appointment was sanctioned for that purpose by the Secretary of State. The Excise Commissioner objects to the employment of these officers in the charge of treasures and on judicial work, on the ground that this interferes with the important duty of inspection. The Lieutenant-Governor's own observations while on tour bear out this objection. Constant inspection is the first condition of efficient excise administration, and judicial work must interfere with it seriously, while a Deputy Collector engaged in treasury business can obviously only leave the station on days when the treasury is closed. Nevertheless, as was pointed out in the Resolution on the Excise Report for 1889-90, no hard-and-fast rule can be laid down on the subject. What spare time the Deputy Collector has from excise work may properly be employed in trying criminal cases; and the Government must rely on the discretion of the local officers not to divert the Excise Deputy Collector's services from the special department to which he is attached. In districts where the excise work is not of sufficient importance to justify the appointment of a Deputy Collector, the Excise Commissioner has recently suggested that "smart and active young Sub-Deputy Collectors" might with advantage be appointed for excise purposes to districts which are not important enough to require Special Deputy Collectors, and the Board have the proposal under their consideration. The subordinate establishment of the department, including the officers known as inspectors, sub-inspectors, darogas and mohurirs, was greatly improved during the year by weeding out useless men and introducing a better educated and more respectable class. It is proposed to abolish the vicious system of incremental pay, and to reorganize the entire establishment in regular grades, so that able and industrious men may obtain

promotion according to their merits. In connexion with the working of the detective staff of the department, the Excise Commissioner states that excise officers are unable to make a search without the assistance of a police officer, and complains that the delay caused by this, and in some cases by jealousy and perversity on the part of police officers, has rendered searches ineffectual. He also refers to the inconvenience arising from the fact that excise officers when making an arrest have no power to release an offender on bail. It is understood that this criticism is directed at sections 40 and 44 of the Bengal Excise Act VII of 1878. The questions raised are of importance, and if it is intended to advocate a change in the law, the subject should be brought forward especially, and not touched on casually in the course of an annual report.

4. The following statement shows the excise revenue and expenditure of Bengal for the last five years :—

PERIOD.	Revenue.	Charges.	Net revenue.	Percentage of charges.
	Rs.	Rs.	Rs.	
1886-87	1,01,22,786	3,75,252	97,47,534	3·7
1887-88	1,08,62,037	4,22,608	1,04,39,429	3·8

Financial results.

According to these figures, which represent the actual receipts during each year, the financial results of the year are a decrease of Rs. 12,544 in the gross revenue and an increase of Rs. 97,911 in the charges, showing a decrease in the net revenue of Rs. 1,10,465, which compares favourably with the decrease of Rs. 4,60,521 referred to in the Resolution on last year's report. Of the increase, amounting to Rs. 97,911, in the charges of the past year as compared with those of 1889-90, Rs. 66,564 is directly due to the extension of the distillery system, and most of the balance to the greater liberality in granting rewards for the detection of excise offences and the heavier expenditure in travelling allowance which the present methods of administration involve. The outstill system, as has often been pointed out, established everywhere a self-acting detective agency which tended to keep down illicit distilla Under the central distillery *régime* no one's self-interest is enlisted on the side of the Government, and greater vigilance and activity are demanded from the inspecting and detective staff of the Excise Department. By showing merely the net increase in charges, the Excise Commissioner somewhat under-states the actual cost to Government of the changes that have been introduced, for the sum of Rs. 15,387 which figures as a saving under the head of Excise merely represents the cost of transferring to income-tax duties a number of officers who were formerly employed partly on income-tax and partly on excise duties.

5. The following statement illustrates the fluctuations in the revenue derived from the various exciseable articles during the last five years :—

						Net decrease ... 12,554	

Notwithstanding a loss of Rs. 1,78,870, or 3·79 per cent, during the last two years, on country spirits, which contribute nearly 44 per cent. of the entire

revenue, almost all the other heads show such a rate of increase that the net decline of revenue, which amounted to Rs. 4,15,542 in the preceding year, has fallen to Rs. 12,554. Calculated on the population ascertained in the recent census, the average incidence of the excise revenue is two annas and four pies per head.

Current settlements.

6. The settlements for the current year show an increase in every division except the Presidency and Patna, the net advance on last year's results being Rs. 3,18,180. The decrease in the two divisions referred to, amounting in all to Rs. 48,360, is ascribed to the closing of some superfluous shops and to others remaining unsettled owing to the refusal of the abkars to accept settlement at enhanced rates. The Excise Commissioner anticipates a further increase before the close of the year, but in view of the deficiency of rainfall in many districts of the Province, and of the close sympathy that prevails between agricultural prosperity and excise revenue, the Lieutenant-Governor feels some doubt whether this can be reckoned on with confidence.

Country spirits.

7. Map No. VI, prefixed to the report, gives a clear view of the three different systems under which excise duty is now levied upon country spirits in Bengal. In the central portion of Bengal proper lying mainly between the Ganges and the sea, and including Dacca and Mymensingh on the east and Orissa on the west, all outstills have been abolished and only distilleries are allowed. In Behar, and to some extent in the Hazaribagh district of Chota Nagpore, a mixed or dual system prevails : distilleries have been established at selected stations, and outstills closed within the area which can be reached by distillery liquor ; while in the rest of the district outstills are retained under stringent restrictions as to the amount of liquor the lessees may manufacture. In Northern Bengal, in Chota Nagpore with the exception of Hazaribagh, and in the Chittagong Division, there are no distilleries, and in the last-named area no attempt has as yet been made to restrict the capacities of stills and vats in order to limit the outturn of spirit. On the 1st April 1890 a great extension of the distillery system was effected by abolishing outstills throughout the Burdwan, Presidency, Dacca, and Orissa Divisions. The immediate result of this measure has been a decline in the revenue from country spirits of Rs. 1,78,870.

8. The following statement compares the excise revenue derived from country spirits during the last two years (*a*) in the sixteen districts in which outstills were abolished on 1st April 1890 ; (*b*) in Calcutta, the 24-Pergunnahs and Howrah, where the distillery system has been in force since the 1st April 1889 ; (*c*) in the districts of Behar and Chota Nagpore, where the dual system of administration prevails:—

9. Taking the groups by divisions, it will be seen that in the districts of the Burdwan Division included in group (*a*) the revenue fell off from Rs. 4,09,951 to Rs. 2,90,181, being a loss of Rs. 1,19,770. The Excise Commissioner considers that this is only partially due to decreased consumption caused by the sudden rise in the retail price of spirit. In his opinion much of the decrease must be put down to illicit distillation, and in support of this view he refers to the fact that 65 persons were convicted of this offence in Bankura, 22 in Midnapore and 10 in the Jehanabad sub-division of Hooghly, where it is reported that the zemindars actually levy a tax on illicit distillation and protect it—an allegation which, as the Excise Commissioner observes, is a serious matter and deserves further inquiry. It is observed that the number of persons other than licensed vendors, who were convicted under the Excise Law in these districts, rose from 394 in 1889-90 to 642 in the past year, and it is presumed that this increase has some connection with the introduction of distilleries; but the statement of convictions does not show how many persons were convicted of illicit distillation A classified statement of offences should be included in the next report. In the Presidency Division every district except Khulna shows a decrease, but the total loss of revenue in the four districts affected by the change was only Rs. 25,056. The Excise Commissioner suspects that illicit distillation prevails to a considerable extent in Moorshedabad and Nuddea, but the statistics do not necessarily indicate this conclusion, and few cases have been detected. All the districts of the Dacca Division except Furreedpore show a moderate increase of revenue as compared with 1889-90, but in all, except Dacca, the revenue is less than in 1888-89, when a larger number of outstills was open. No illicit distillation is suspected, but outstill liquor is believed to have been smuggled into Furreedpore from Pubna and into Mymensingh from the Garo Hills. In Orissa, Cuttack shows a substantial increase, Pooree and Balasore a small decline, the net result being a gain to the revenue of Rs. 5,383. The Excise Commissioner says that "the rise in the price of spirits has in some measure driven the people to use ganja and opium in increased quantities," but this opinion is not borne out by the statistics of consumption, which show, in the case of ganja, a falling off from 264 maunds

to 241, and of opium from 303 to 298. In the sixteen districts included in this group, the revenue from country spirits fell from Rs. 7,96,006 to Rs. 6,79,997, and as the former figure does not include two months' outstill fees paid in advance, the decline is considerably greater than this comparison shows.

10. Turning now to the districts of group *b*), it is observed that outstills were abolished in the 24-Pergunnahs, Howrah, and the Serampore sub-division of Hooghly from the 1st April 1889, but before that date the distillery system had been in force in the city and suburbs of Calcutta, and in the riparian municipalities of Howrah and Serampore. The entire area shows an increase of revenue amounting to Rs. 84,181, which is clearly due to the abolition of outstills in the surrounding districts having enhanced the demand for distillery spirit. An attempt is made in the Excise Commissioner's report to demonstrate the effect of the change of system on the consumption of country rum, but the argument is obscurely stated and does not seem to lead to any definite conclusion.

11. In discussing the respective merits of outstills and central distilleries with reference to the results arrived at in groups (*a*) and (*b*, the Excise Commissioner lays too much stress on the sacrifice of revenue, and appears rather to overlook the incidental advantages of the distillery system. It seems to the Lieutenant-Governor that the loss of Rs. 1,16,009 which has taken place in the districts of group (*a*) is nothing more than might have been expected in the first year of a new policy. In some respects, perhaps, the change was too sweeping, and in the wilder tracts of Midnapore and Bankura, where population is sparse, the people addicted to drink, the standard of living low, and illicit distillation easy, it has been found necessary to reintroduce outstills from the 1st April 1891. But in settled tracts where the people are fairly prosperous and the lower castes do not predominate, the Lieutenant-Governor sees no reason why the distillery system should not succeed in raising a moderate revenue, and at the same time in reducing consumption as soon as the disturbing effects of the change have passed away and smuggling has been reduced by improved preventive arrangements.

12. In the districts included in group (*c*), the excise arrangements are worked on a peculiar system which originated in the attempt made by Mr. Quinn, when Collector of Patna in 1885-86, to give effect to the proposal of the Excise Commission to limit the capacity of stills and fermenting vessels used by the lessees of outstills. A description of the present state of things in Patna, as ascertained by recent inspection, will serve to illustrate the practical working of the system. In that district the central distillery, which was opened in 1886, supplies country spirit to only 20 shops (28 in 1890-91) situated within the limits of the Patna Municipality, a tract on the south bank of the Ganges thirteen miles long and from one mile to five miles broad. The rest of the district is supplied by outstills; the capacity of each still and the number and capacity of the fermenting vats being limited according to the estimated consumption of the area served, and the upset price fixed accordingly. The data available for determining these particulars are said to be the following:—(*i*) The number of customers frequenting the shop, as stated by the abkar himself and as ascertained by the excise officers by enquiring among the residents of the village, (*ii*) the abkar's accounts of the raw materials bought by him from the traders who deal in *mahua* and *chhoa* (or molasses), (*iii*) the abkar's accounts of the actual sales made by him during the past year. The local consumption having been estimated from these data, the size of the still and the size and number of the fermenting vats are determined so as to enable the abkar to produce the requisite quantity. The position of the still in relation to the area supplied by the central distillery is not taken into account. Experiments have shown that one maund of materials, viz. 35 seers of *mahua* and five seers of *chhoa*, will yield from 1 89 to 2 gallons of London proof spirit. The rate of duty is Rs. 2 per gallon. In order, therefore, to fix the upset price of the license, an estimate is made of the number of the maunds that the still can work off, and this number multiplied by four gives the amount required. In framing this estimate allowance is made for the number of times that a still can be worked between sunrise and sunset, a point on which the views of the abkar are apt to differ from those of the excise officer. Another fact for which allowance has to be made is the varying rate of fermentation according to the

temperature, so that in order to enable the abkar to work up to his sanctioned outturn, about one-third more vats must be allowed in winter than would be necessary in summer. The liquor manufactured under this system is extremely weak. It will not stand keeping, and the consumers prefer to drink it fresh, if not actully warm, from the still. It is almost always more than 50 degrees below proof, sometimes as low as 90, and it sells generally at from eight annas to one anna per quart bottle, according to its strength.

13. Under whatever names and with whatever slight variations of strength country liquor is distilled in Behar, it is clear that the weakest variety, the popular drink of the masses, contains a very small proportion of alcohol and must be sold cheap. The standard of living is low; the price of country liquor depends upon custom and tradition as much as upon more scientific causes, and any attempt to raise it must be made discreetly and with careful regard to local conditions. If too great pressure is put on the abkars, the producing machinery of the country may be thrown out of gear, illicit distillation stimulated and revenue sacrificed to no purpose. As it is, the results of the past year are far from encouraging. In every district of group (c), except in Hazaribagh, where there was an increase of Rs. 16,531, a marked decline of revenue has taken place, amounting over the whole area to Rs. 2,58,224. Of this loss of revenue, Rs. 2,18,249 occurred under the head of outstills, and the balance under distillery income. The number of outstills was reduced from 1,160 to 830, but there is nothing in the report to show how much of this reduction was advisedly effected by the Excise Commissioner, and how much was due to the refusal of the abkars to take stills which were offered them for settlement on unfavourable terms. In Hazaribagh the number of stills was reduced from 137 to 128, while the outstill revenue rose from Rs. 1,20,887 to Rs. 1,36,620. In Patna, on the other hand, the result of reducing stills from 126 to 110 was a fall of outstill revenue from Rs 2,33,613 to Rs. 1,87,034. A suggestion is thrown out in the Excise Commissioner's report that the season may have had something to do with the reluctance of the abkars to take settlement; but if this had been the case it must equally have affected the settlements in Hazaribagh. Taking the statistics as a whole, they seem to indicate less success in managing excise in Behar than elsewhere. It is admitted that the attempt to raise retail prices of country liquor has at present been a failure, that the abkars have combined to refuse settlements, and that the Excise Department has failed in the attempt to break up these combinations. The main object of course is to effect a gradual and lasting reduction in the consumption of country liquor, and thus to wean the drinking classes from habits of intemperance. If these results are attained, the loss of revenue becomes a secondary consideration. But the first step must be to raise the retail price of liquor and to reform and reorganize the subordinate excise establishments so as to check illicit distillation. Until these measures are carried out, the closing of outstills by raising the upset prices of licenses will merely tend to substitute illicit for licit spirit, and the revenue will suffer while no moral advantages will be gained by the sacrifice. In attempting to raise the customary price of an article in large demand, careful consideration must be given to the local conditions of the trade, the circumstances of the persons by whom it is carried on, and the habits of the customers whom they supply. It looks as if too little attention had been paid to these points, and the upset rates for shops fixed too high for the abkars to be able to recoup themselves by raising the price of liquor. No certain conclusion can be drawn from the fall in the revenue from still-head duty, which amounts to Rs. 33,966. Where every distillery is surrounded by a ring of outstills, and there is nothing but the vigilance of excise subordinates to prevent the sale of outstill liquor within distillery limits, it is difficult to justify the assertion that "the falling off in the quantity of distillery spirit sold shows clearly that the floods and agricultural depression or other causes have injuriously affected the trade in spirit." That the trade in duty-paying spirit has been injuriously affected there can be no doubt, but there is nothing to show that this has been accompanied by reduced consumption, and it is at least as likely to have been caused by an unduly severe excise policy as by agricultural vicissitudes of which no independent evidence is forthcoming.

Country rum.

14. The revenue from country rum declined during the year from Rs. 1,00,659 to Rs. 98,383, and the consumption from 44,535 gallons to 41,117 gallons. The Board have under their consideration the question of equalising the duty on country rum with the varying rates of duty on country spirits, and it is possible that the decision arrived at on this point may lead to very important changes in the excise administration of these provinces. The Lieutenant-Governor hopes that in dealing with this matter the Board will also endeavour to modify the strangely varying rates of duty on country spirits, which were fixed many years ago with reference to the supposed standard of living in the districts concerned, so as to bring about a nearer approach to uniformity in contiguous districts.

Imported liquor.

15. The revenue from imported liquor is derived partly from duty levied on importation, and partly from fees on licenses for wholesale and retail sale. The duty is credited under the head of Customs, and the Excise Department is concerned only with the revenue from fees. Here it is to be observed that the number of licenses has been reduced from 837 in 1889-90 to 816 in the past year, while the proceeds of fees rose from Rs. 2,14,090 to Rs. 2,31,095. Since November 1888 these licenses have been allowed to cover the sale of country rum, and more recently, in consequence of the inability of vendors of country spirit, who pay high fees, to compete with dealers in cheap imported liquor, it has been found advisable to make combined settlements of licenses for the sale of country spirit, imported liquor and country rum. No attempt can therefore be made to distinguish the revenue collected under these three heads. The Excise Commissioner states that cheap and deleterious liquors continue to be imported from Europe, and, notwithstanding the import duty of Rs. 6 per gallon, compete successfully with the more wholesome drink produced in the country. It may be hoped that the development of country rum will put an end to this state of things.

Tari.

16. The revenue from tari rose during 1890-91 from Rs. 8,26,314 to Rs. 8,45,586, and the settlements made during the current year lead the Excise Commissioner to anticipate a revenue of Rs. 9,35,000. Of the amount realized in the past year, Rs. 5,67,185 were collected in the Patna and Bhagulpore Divisions, while Rs. 1,66,257 were levied in the Presidency Division. Hooghly, Howrah and Cuttack raise about Rs. 25,000 apiece under this head, but elsewhere throughout the province the revenue is insignificant. The Excise Commissioner discusses at length the important question of developing the receipts from tari, on the system introduced first in Bombay and afterwards in Madras with excellent result, the duty having produced in the Madras Presidency a revenue of 44 lakhs in the last year for which returns are available, and proposes the introduction of a more precise system under which the license fee would be fixed according to the number of trees tapped for juice. A register of trees is being prepared in Patna, and inspecting officers are collecting statistics. At the same time the rights of the landholders to levy rent on the trees will, as the Board observe, have to be investigated and definitely settled.

Pachwai.

17. The revenue from pachwai or rice-beer, known also as *handia* from the earthen pot (*handi*) in which it is brewed, and including the beer brewed from *marwa* in Darjeeling, rose from Rs. 2,32,682 to Rs. 2,72,288. Pachwai is a wholesome and moderate form of stimulant, and the Lieutenant-Governor agrees with the Excise Commissioner in thinking that its consumption should be encouraged, which is quite compatible with raising a considerable income from it by carefully regulated taxation.

Ganja.

18. The statistics of ganja during the last three years are as follow:—

	Licenses.	Quantity consumed.	Revenue.
	No.	Mds.	Rs.
1888-89	2,922	6,413	23,18,353
1889-90	2,819	6,101	22,59,690
1890-91	2,586	6,095	23,11,713

The rise in revenue concurrently with a falling off in consumption is said to be due partly to the fact that the decrease in consumption affected almost entirely the flat ganja, which is the most lightly taxed kind, and partly to the increase in the tax on *choor* ganja from September 1889. That an increase of revenue from the drug should have been accompanied by reduced consumption is of course satisfactory, but until our knowledge of the subject has been materially enlarged, the Lieutenant-Governor must decline to endorse Mr. Westmacott's sweeping condemnation of ganja as a "most pernicious article." Sir Charles Elliott has known many instances of its steady and regular use by most respectable people who find themselves able to do hard work with its help, and who feel no injurious effects from it. In this respect it resembles opium. After taking a small quantity of either drug, boatmen and dâk-runners can go long distances, and coolies carry heavy loads without requiring much food, so that both articles are, like alcohol, a food of a highly concentrated nature.

Opium.

19. The following statement illustrates the demand for excise opium during the last three years:—

	Number of licenses. No.	Consumption. Mds.	Duty. Rs.
1888-89	2,374	1,925	15,98,455
1889-90	3,397	1,905	15,76,123
1890-91	2,952	1,942	16,00,093

The figures for licenses include permits to licensed druggists authorising the retail sale of opium and its preparations and poppy-heads for medicinal purpose only. The number of these permits varies strangely in different districts. In Noakholly there were 360, in Burdwan 159, in Hooghly 142, in Backergunge 103 (against 271 in the previous year), and in Calcutta 101. In many districts, again, no permits at all have been issued. The subject seems to need further inquiry. It is not enough to say, as the Excise Commissioner says, that it is the duty of excise officers to prevent the sale of opium for ordinary consumption under the cloak of these permits. Since the close of the year under review the price of excise opium has been raised in the districts of Eastern and Northern Bengal which border on Assam, and the Lieutenant-Governor will be prepared to raise it still further should it be found hereafter necessary to do so. In order to combat the trade in contraband opium, arrangements are being made to issue excise opium in the form of ten-tola slabs, so marked and sub-divided as to be easily broken into one-tola tablets, each bearing an impression on both sides.

Offences against the excise laws.

20. The number of arrests for offences against the excise laws rose from 4,441 to 5,054, and the convictions from 3,747 to 4,233, the percentage of convictions to arrests during the past year being 83·7. Out of Rs. 85,795 imposed as fines, Rs. 58,729 were realised, being 68·4 per cent. as against 69·8 in the preceding year. The amount paid in rewards increased from Rs. 52,592 in 1889-90 to Rs. 68,244 in the past year, of which Rs. 30,688 were paid to the police and Rs. 37,556 to excise officers. It would appear from this that no rewards at all were granted to private informers. The Lieutenant-Governor would be glad to know whether this is the case. He understands that one of the chief objects of spending large sums on rewards is to induce people to give information of excise offences, but this object seems likely to be defeated if an official monopoly is set up, such as this report seems to indicate.

21. The Lieutenant-Governor desires to thank Mr. Westmacott for his energetic and on the whole successful administration of excise during the past year. The subject is difficult in itself, and it has been further complicated by the changes of policy which have taken place during recent years, and the effect of which is likely to be felt for some time to come. The names of the officers commended by the Excise Commissioner will be communicated to the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Offg. Secretary to the Govt. of Bengal.

IRRIGATION OPERATIONS FOR RABI, 1890-91.

No. 1476*I*.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

Irrigation.

Dated Calcutta, the 20th October 1891.

RESOLUTION.

READ—

Statements Nos. I, II, and III, showing irrigation operations of canals in Bengal during the *rabi* season of 1890-91.

OBSERVATIONS.—The area irrigated from Bengal canals during the *rabi* season of 1890-91 was 58,655 acres, of which 53,137 acres were irrigated from the Sone Canals. These figures differ but slightly from those of the previous year, and represent the amount of irrigation usually effected in years of favourable rain. The only cause likely to produce any great fluctuation in the *rabi* returns is the occurrence of a very dry season in South Behar, such as that of 1888-89, when, out of 106,883 acres irrigated in Bengal, 97,225 acres were irrigated from the Sone Canals.

2. The details of increase or decrease in the area irrigated by each canal are given in the following comparative statement:—

Canal.		Rabi season. 1889-90.	Rabi season. 1890-91.	More.	Less.
		Acres.	Acres.	Acres.	Acres.
Orissa ...	Taldunda	605	559	......	46
	Kendrapara / High Level, Range I	5,230	3,658	......	1,572
	High Level, Ranges I and II ...	62	33	......	29

	Total ...	59,332	58,655	2,503	3,180
	Net decrease ...	......	......	......	677

ORDER.—Ordered that a copy of this Resolution, and of the statements Nos. I, II, and III, be submitted to the Government of India, in the Public Works Department, for information; also that copies be forwarded to the Commissioners of the Orissa, Burdwan, and Patna Divisions; the Collectors of Cuttack, Midnapore, Patna, Shahabad, Gya, and Sarun; the Superintending Engineers of the Orissa, South-Western, and Sone Circles; and the Examiner of Public Works Accounts, Bengal, for information.

By order of the Lieutenant-Governor of Bengal,

J. M. McNEILE, *Col.*, R.E.,

Secretary to the Government of Bengal.

	Western Districts.		
	Burdwan Divn.		
1	Burdwan Oct. 17, '91 Raneegunge ...	Nil 0·72	Weather—hot and dry; cool in the morning. Sugarcane and *aman* paddy suffering much for want of rain. Sowing of *rabi* and *kalai* has commenced. Prices of common rice:— Srs. Burdwan ... ... 16¼ per rupee. Culna ... ... 14 per rupee. Cutwa ... ... 16 per rupee. Raneegunge ... ... 16 per rupee.
2	Bankoora ,, 17, '91	0·00	Weather—seasonable. Recent rain has done much good to standing crops, but more rain wanted. *Nuan* paddy ripening. Fodder and water plentiful. No cattle-disease reported. Common rice selling at 18¾ seers per rupee.
3	Birbhum ,, 17, '91	Nil	Weather—seasonable. No rain during the week; but crops continue in a flourishing state. More rain needed. Prices of common rice from 16 to 18 seers per rupee.
4	Midnapur ,, 17, '91	Nil	Weather—seasonable and cool in the mornings. Prospects of crops continue fair. Rain wanted. Prices of common rice:— Srs. Sudder ... ... 16 per rupee. Contai ... ... 19 per rupee. Tumluk ... ... 16 per rupee. Ghatal ... ... 16 per rupee.
5	Hooghly ,, 17, '91	Nil	Crops require more rain. Prices of common rice:— Srs. Sudder ... ... 12¼ per rupee. Serampore ... ... 12 per rupee. Jehanabad ... ... 16 per rupee.
6	Howrah ,, 17, '91	Nil	Weather—fine. Prospects of *aman* and sugarcane crops satisfactory. Price of common rice 14 seers per rupee. Health of cattle good. Fodder and watter-supply sufficient.
	Central Districts.		
	Presidency Divn.		
7	24-Perghs. Oct. 20, '91	Nil	Weather—seasonable. Harvesting of *aus* and steeping of jute nearly completed. *Aman* suffering in parts for want of rain. Sugarcane doing well. Cattle-disease reported from Harowa. Fodder and water sufficient. Prices remain unchanged.
8	Nuddea ,, 17, '91	Nil	Weather—seasonable. Prospects of *aman* not good owing to want of rain. Sowing of cold-weather crops continues. Condition of cattle good, and supply of fodder and water sufficient.
9	Khoolna ,, 17, '91	Nil	Weather—fine and clear; days hot, nights cool. Prospect of *aman* fair. More rain wanted. Fodder and water sufficient.
10	Jessore ,, 17, '91	Nil	Weather—mornings and evenings cool, days warm. Rain wanted for *aman*. Cultivation of winter crops going on. Condition of cattle good. Supply of fodder sufficient. Prices of rice stationary.
11	Murshedabad ,, 19, 91	Nil	Weather—nights cool. State of jute and sugarcane appears to be good. Rain badly wanted in high lands for winter rice. Fodder and water sufficient for cattle. Six head of cattle died of small-pox in thana Khargram in Kandi subdivision.
	Rajshahye Divn.		
12	Dinagepur ,, 17, '91	Nil	Weather—hot during the day, mornings and evenings cool and pleasant. Prospects of winter rice unfavourable; plants reported to be withering in places for want of rain; outturn at present estimated to be 6 annas. *Rabi* cultivation in progress. Price of rice both at Sudder and Thakurgaon stationary. Condition of cattle good. Supply of fodder and drinking water sufficient.
13	Rajshahye ,, 17, '91	Nil	Weather—hot days with comparatively cooler nights. Condition of *aman* not favourable. No expectation of rain. Prospects of *rabi* crops fair. Steeping of jute not finished. Ganja plants thriving well. No cattle-disease. Supply of fodder and water plentiful.
14	Rungpur ,, 17, '91	Nil	Weather—mornings and evenings cool; hot during the day. Prospect of *aman* continues the same. Land is being prepared for mustard sowing. Fodder plentiful.

	No	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*					
		Central Districts—concld.			
RAJSHAHYE DIVN.—*concld.*	15	Bogra	Oct. 17, '91	Nil	Weather—fine, dry and cool, with northerly breezes. *Aman* rice on the higher lands will fail altogether. If good rain falls within ten days, most of the crop on the lands of middling height will be saved, but will still be poor. On the lowest lands the crop will be fair. In some places the fields are being irrigated by hand labour: this is unusual in the district. Preparation for the cold-weather crops is going on very vigorously, and the area, especially of mustard, will be very much larger than usual. Potatoes also are being planted much more extensively than formerly. *Til* and sugarcane doing well. Common rice selling at 15 seers per rupee. No lack of fodder and water, and cattle are in excellent condition.
	16	Pubna	„ 17, '91	Nil	Weather—fine and cool. Prospect of *aman* unfavourable. Rivers subsiding again. No cattle-disease.
	17	Darjeeling	...	...	Report not received.
	18	Julpigoree	„ 17, '91	Nil	Weather—hot during day, cold at night. Prospect of *haimanti* paddy not good. Common rice sells at 11 seers per rupee. Fodder and water for cattle sufficient.
		Eastern Districts.			
DACCA DIVN.	19	Dacca	Oct. 17, '91	Figures not given.	Weather—seasonable. Prospect of *aman* paddy fair. *Asvini* paddy being cut. Fodder available. Common rice sold at from 13 to 16 seers per rupee. Condition of cattle good.
	20	Furreedpur	„ 17, '91	Nil	Weather—seasonable. Prospect of standing crops good excepting that of high land paddy which has withered for want of sufficient rain. Sowing of *rabi* crops commenced. Price of rice stationary. No cattle-disease.
	21	Backergunge	„ 17, '91	Nil	Weather—seasonable: days hot, nights cool, mornings somewhat foggy. State and prospects of crops not bad. Rain much wanted. Price of rice stationary. Supply of fodder and water sufficient.
	22	Mymensingh	„ 17, '91	Nil	Weather—hot in day, but cool mornings and evenings. Jute has been harvested. Other crops doing well. Rice is selling at 14 seers per rupee. No cattle-disease. Supply of water and fodder sufficient.
CHITTAGONG DIVN.	23	Chittagong	„ 17, '91	0·05	Weather—dry and clear. Harvesting of *aus* completed; average outturn estimated at 12 annas. More rain wanted for *aman* crop Condition of cattle and fodder good. Prices steady.
	24	Noakhally	„ 17, 91	Nil	Weather—fine and bright. Rain much wanted for rice crop. Prospects unfavourable. Price of rice has risen in Fenny: *aus* rice sells there at 18 and *aman* at 16 seers per rupee; in Sudder at 18½ and 16½ seers respectively. Cattle in good condition. Fodder and water sufficient.
	25	Tipperah	„ 17, '91	Nil	Weather—seasonable. Rain wanted in high lands on which prospect of *aman* is not favourable. Price of rice pretty nearly stationary. Fodder sufficient. No cattle-disease.
	26	Chittagong Hill Tracts.	„ 15, '91	Nil	Weather—hot with foggy mornings throughout the week. Harvesting of *jum* paddy continues. Cotton in pods in some places. Lands are being ploughed for mustard and other cold-weather crops. Common rice is being sold at 12½ seers per rupee.
BEHAR.					
PATNA DIVN.	27	Patna	„ 17, '91	Nil	Weather—hot; cool at night. Westerly wind. Paddy dying for want of rain. More rain required. Westerly wind drying up moisture and tanks. Land being prepared for *rabi*.
	28	Gya	„ 17, '91	Nil	Weather—mornings cool and days hot. Paddy dying for want of rain. Rain badly wanted everywhere. Prices of food-grains almost stationary. Supply of fodder and water for cattle sufficient.
	29	Shahabad	„ 17, '91	Nil	Temperature has risen. Weather fine. *Bhadoi* harvest nearly over. Lands being prepared for *rabi* everywhere. Some *rabi* seed has been sown and is germinating. Rice in unirrigated areas has been damaged by drought. Rain is much wanted both for rice and *rabi*. Prices have slightly fallen at Arrah, risen at Sasseram, elsewhere stationary. Fodder insufficient in a small part of Buxar subdivision.
	30	Durbhunga	„ 17, '91	Nil	Weather—bright with west wind. Up land rice withering for want of rain. *Rabi* sowings commenced. Prices of food-grains stationary. Water and fodder for cattle sufficient.

	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR—*concld.*					
PATNA DIVN—*concld.*	31	Mozufferpur	Oct. 17, '91	Nil	Weather—mornings and nights cool; days hot. Want of rain is beginning to cause anxiety in many places. Rain urgently wanted for *rabi* sowings and for winter rice. In Sitamarhi subdivision fields near the river have been artificially irrigated for about two miles on either side; lands are being prepared for *rabi* sowings. Fodder and water for cattle plentiful. Cattle in good condition. Prices not high for this season.
	32	Sarun	„ 17, '91	Nil	Weather—seasonable. In Gopalgunge subdivision paddy doing well, but in Sewan and Sudder it is suffering for want of rain. Supply of fodder and water for cattle sufficient.
	33	Chumparun	„ 17, '91	Nil	Weather—seasonable. *Bhadoi* harvest nearly finished. Prospect of *aghani* rice generally good. Lands are being prepared for *rabi* crops. Fodder and water for cattle sufficient.
BHAGULPORE DIVN.	34	Monghyr	„ 17, '91	Nil	Weather—rainless; hot in the day, but nights getting cool. Rain urgently required for winter rice which is suffering much. Preparation for *rab* sowings retarded for want of moisture in Lukhiserai outpost. Fodder and water-supply sufficient. Condition of cattle good.
	35	Bhagulpore	„ 17, '91	Nil	Weather—seasonable: days hot, nights cool. Rain wanted throughout the district. Prospects of crops very unfavourable in Banka and Soopool subdivisions. Rice on high lands dying for want of rain. No cattle-disease. Supply of fodder sufficient.
	36	Purneah	„ 17, '91	Nil	No rain. Signs of cold weather in mornings and evenings. Standing paddy doing well in Arrareah, but more rain still wanted in Kishengunge. In Sudder *aghani* suffering for want of rain. In Arrareah and parts of Sudder sowings of *rabi* going on, but elsewhere land is being prepared for this crop. Fodder and water for cattle plentiful everywhere. No cattle-disease.
	37	Maldah	„ 17, '91	Nil	Weather—seasonable. Winter rice suffering for want of rain. Prospects of *kalai* favourable. Sowing of peas and mustard going on. Lands are being prepared for wheat and other crops. Wheat sown to the extent of four annas in thana English Bazar. Condition of cattle good. Fodder and water-supply sufficient. Price of rice stationary.
	38	Sonthal Perghs.	„ 17, 91	Nil	Weather—cool. Wind westerly. Rice coming into ear. Prospects good, but more rain wanted. Minor crops doing well. Water and fodder sufficient.
ORISSA.					
ORISSA DIVN.	39	Cuttack	„ 17, '91	1·75	Weather—seasonable. *Beali* harvest over; outturn estimated at 12 annas. General condition of people, crop and cattle is good except that in parts fodder-supply is insufficient and the *sarad* crop on low lands has been damaged, the cause being the late floods.
	40	Pooree	„ 15, '91	0·62	Weather—seasonable. Re-weeding of winter rice (*sarad*) going on. Harvesting of early rice completed. Price of common rice varying from 23 seers 10 chittacks to 26 seers 4 chittacks per rupee.
		Gope	...	0·25	
		Khurda	...	0·35	
		Banpur	...	Nil	
	41	Balasore	„ 17, '91	0·62	Weather—too dry. Outturn of *beali* or early rice crop has been not much below the average. Winter rice promises to yield an average outturn if good rain falls within the curent month.
CHOTA NAGPORE					
South-West Frontier Agency.					
CHOTA NAGPORE DIVN.	42	Hazaribagh	Oct. 17, '91	Nil	Weather.—bright; cool in mornings and evenings. Prospects of crops fair, but rain needed.
	43	Lohardugga	„ 17, '91	0·03	Weather—warm. Harvesting of *gora* rice continues. Rain wanted for winter rice. Fodder and water plentiful.
	44	Singbhoom	„ 17, '91	0·16	Weather—seasonable. Cold weather has set in. *Gora* and *bera dhan* being cut and cotton being gathered. Prospects everywhere excellent. Prices stationary.
	45	Manbhoom	„ 17, '91	Nil	Cold weather setting in. Rain much wanted, particularly for high lands. Fodder and water-supply sufficient. Rice selling at from 14 to 20 seers per rupee.

Published for general information.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF SEPTEMBER 1891.

THE most notable peculiarities observable in the weather conditions of September, are :—

1. The numerous shallow depressions which formed during the early part of the month in the north-west angle of the Bay, and moved in a north-westerly direction along the trough of low pressure, which extending from the head of the Bay over part of the Central and North-Western Provinces remained, more or less, distinctly defined till nearly the end of the third week. The influence of these depressions was very limited, and the rainfall caused by them, though generally heavy near the centre, was almost entirely confined to the south-west corner of the province. The wind circulation was distinctly cyclonic but always light.

2. The high temperature which owing to the absence of rainfall has obtained in the northern districts, and the low readings in Orissa, where heavy rainfall occurred during the passage of the depressions.

3. The scanty rainfall in all districts except Orissa and Chutia Nagpur, defect varying from 2·59 inches in South-West Bengal to 8·46 inches in North Bengal.

Meteorology of the month.—At the beginning of the month a centre of low pressure existed off the Orissa coast with north-easterly winds at the Orissa stations, and a steady easterly current elsewhere. During the next two days it gradually filled up, and became merged in the trough of low pressure which was then very distinct lying in a north-westerly direction from the head of the Bay The wind circulation on the 3rd was of ordinary monsoon character. The rain caused by the depression was light, and on the 1st extended over Orissa, South-West Bengal, East and North Bengal, and part of Chutia Nagpur. On the 2nd it was more scattered, but on the 3rd was general over the whole province.

On the 4th the second low-pressure area began to form in the north-west angle of the Bay, and wind directions showed a slight indraught towards a point between Saugor Island and False Point Rain was less general and lighter at inland stations, but on both the 4th and 5th very heavy falls occurred in the north-west of the Bay and the neighbouring parts of South-West Bengal and Orissa. This heavy rainfall caused a deepening in the depression, and on the morning of the 5th a very distinct but small and feeble storm existed near the Sandheads, accompanied by a light cyclonic circulation of winds On the 6th it passed between Balasore and Cuttack in a north-westerly direction, giving heavy rain to Orissa and moderate rain to some parts of South-West Bengal and Chutia Nagpur, but Behar, North Bengal, and a considerable portion of East Bengal were almost rainless. Though the storm was accompanied by very heavy rain when passing over Orissa, and gave fairly heavy rain in the Central and North-West Provinces, yet the monsoon current which flowed over Bengal in its rear, was very feeble and mainly confined to the south-western districts.

Very light monsoon weather prevailed over the whole province till the 11th, when a distinct depression formed to the south-east of Saugor Island, and, as in the case of the previous two, moved to the north-west, passing between Balasore and Chyebassa on the 12th. Heavy rain again fell in Orissa, Cuttack reporting 9·81 inches on the 12th, Kendrapara 6·77 inches, and False Point 4·19 inches. On the 13th the depression, which was filling up and becoming more diffused, lay well to the west, and the light rainfall caused by the feeble inrush of monsoon winds after the passage of the depression was fairly general over Bengal. Light monsoon weather prevailed till the 16th, when westerly winds began at the western stations and, owing to the consequent interaction, heavy rain fell in the western districts and at some of the northern stations on the 16th and 17th. On the 18th a feeble low-pressure area passed over Ganjam, causing further heavy rain in Orissa

Conditions then began to change, pressure rose rapidly in Orissa and along the west coast of the Bay, while it fell rapidly at Rangoon and Moulmein, winds becoming northerly in Lower Burmah. On the morning of the 20th a depression showed in the Gulf of Martaban with its centre south of Rangoon. It then advanced in an almost westerly direction, and though of very slight intensity, its rate of motion was so rapid that by the evening of the 22nd it had crossed the Orissa Coast close to False Point. The lowest pressure registered was 29·436″ at False Point, but though pressure fell rapidly as the centre approached, and steep baric gradients followed, still the wind velocities registered were never more than moderate in amount. Hard squalls were reported at False Point, and generally squally weather at the coast stations. On the morning of the 23rd the depression was well inland, moving in the direction of Raipore in the Central Provinces, and on the 24th the centre was between Seoni and Raipore. Till the 26th the westerly motion continued, after which the depression began to fill up and moved more to the north, and ultimately in a north easterly direction till it was near Allahabad, where it practically disappeared about the end of the month. Throughout the existence of the depression, the wind circulation over Bengal was under its influence, and moderately strong winds blew at some distance from its centre. Rain commenced to fall on the 21st in the southern districts, and on the 23rd or 24th in the north of the province. As the depression approached Behar from the west towards the end of the month, rainfall, which had become very scattered after the 27th, again became general in the northern districts from 1st to 3rd October

Pressure.—In consequence of the formation of the frequent shallow depressions in the first half of the month, pressure changes were very variable. As a depression began to form, slow downward changes prevailed over the whole province, generally followed by a brisk fall on the following day. A brisk to rapid rise then set in, and the cycle was generally completed in three or four days. During the latter half of the month when the small cyclonic

storm was crossing the Bay, pressure in Bengal fell steadily from the 20th to the 23rd and then rose till the 26th, after which irregular small oscillations prevailed till the end of the month.

The low pressure which had existed in the north-west angle of the Bay almost continuously for many weeks, remained during the first half of September, and readings were generally below the normal at inland stations. At the end of the first week defect in mean pressure varied from ·02″ in the northern and eastern districts to ·06″ at some of the coast stations. Some rapid changes occurred during the second week, but means were in almost all cases below the normal, and defect from being practically nil in the north of the province, increased to ·07″ at the head of the Bay. The steady rise which prevailed from the 17th to the 19th brought the distribution above the normal, and for the third week means were in excess by amounts ranging from ·01″ to ·04″. Unimportant changes prevailed till the 20th, when a general fall commenced, and though moderately large changes continued for some days, the means for the latter part of the month were generally only slightly above the normal, excess varying from ·05″ in the north to ·03″ in the south. In Orissa and Assam excess was less than ·02″.

Means for the whole month are very nearly normal in South-West Bengal and Assam, below the normal in Orissa, Chutia Nagpur and the west of Behar by less than ·02″, and above elsewhere by variable amounts ranging up to ·03″.

Temperature.—Owing to the very scanty rainfall in all districts except Orissa and the adjacent parts of South-West Bengal and Chutia Nagpur, temperature has been almost without a break above the normal, while in these districts in the south-west corner of the province readings have been steadily largely below the normal. During the first week the mean for Orissa was almost normal, and about 1·5° above in the rest of Bengal and Assam. During the second week the contrast became stronger, excess in the northern districts increasing to between 2° and 3°, while in Orissa the heavy rainfall lowered the temperature to 1·3° below the normal. Between the 12th and the 19th changes were moderately large, but the means were more normal, the only districts where the difference was greater than ·05° being North and South Behar. From being between 1° and 2° above the normal in Assam during the first half of the month, temperature fell there also, and about the middle of the month was practically normal. During the week ending on the 26th rainfall was again heavy in the south-west corner, and the mean temperature was below the normal in Orissa, Chutia Nagpur, and South-West Bengal. In Behar and North Bengal excess was between 1° and 2°, and in Orissa defect amounted to 1·7°. Till the end of the month there was very little change, as, notwithstanding a slight upward tendency, differences from the normal continued fairly large.

The means for the month are very high in Assam, North Bengal, and Behar, and low in Orissa, while there is a small defect in Chutia Nagpur, and a small excess in South-West and East Bengal.

Rainfall.—As stated above, very heavy rain has fallen in Orissa, and about normal amounts in Chutia Nagpur; but probably owing to the small influence of the numerous depressions in the early part of the month, the monsoon current which has flowed over the eastern and northern districts has been unusually weak. Almost the whole of Orissa has received excessive rainfall, and in the Midnapore district and part of the 24-Pergunnahs, there was excess of between 2 inches and 3 inches. The only stations in Chutia Nagpur where falls were below the normal are all in the Hazaribagh district, except the station of Hazaribagh and Gobindpore in the Manbhoom district. Excess at Cuttack is 20·88 inches, at Kendrapara 14·57 inches, and at Jagatsingpore, Chandbally, and Jellasore more than 10 inches. Over the whole of the rest of the province falls were below the normal, defect increasing towards the north-east. Defect is greater than 8 inches in the greater part of North Bengal and part of North Behar, including Purneah, Bhagulpore, and the northern halves of Durbhunga and Mozufferpore. In the rest of Behar and in South-West and East Bengal defect varies from 3 inches to 8 inches.

The comparison of the actual rainfall of the various large divisions of the province during the month is most accurately shown in the form of a percentage. The figures representing the rainfall for the month calculated in this way, are included in the following table under the heading of September. This table really gives a condensed summary of the rainfall statistics of the present year up to date for each meteorological division, the first nine columns giving the actual average falls in each division for each month expressed as a percentage of the normal, while the tenth column gives the actual rainfall of the first nine months as a percentage of the normal rainfall for that period:—

METEOROLOGICAL DIVISIONS.	January.	February.	March.	April.	May.	June.	July.	August.	September.	Actual rainfall of first nine months of 1891 expressed as a percentage of the normal fall for the period.
Orissa	11	167	424	36	134	28	74	139	180	116
South-West Bengal ...	53	193	308	60	170	61	94	84	71	95
East Bengal ...	2	811	98	130	151	71	100	65	51	88
North Bengal ...	78	377	239	77	140	53	117	46	37	78
North Behar ...	171	283	590	19	172	94	83	65	35	82
South Behar ...	258	159	734	30	165	88	85	83	56	92
Chutia Nagpur ...	163	91	506	30	148	47	97	93	102	99

It will be seen that the percentage for the month of September for North Behar is only 35, for North Bengal 37, East Bengal 51, and South Behar 56. The total rainfall in Chutia Nagpur for the year is practically normal, and in Orissa 15 per cent. in excess The defect is not large in either South Behar or South-West Bengal, but in North Bengal the total fall is 78 per cent., and in North Behar 82 per cent. of the normal.

The actual falls are over 20 inches in the Cuttack district, part of Balasore, and in parts of the Julpigoree Dooars and the Dargeeling Terai, but these heavy falls in North Bengal are very local, and, in fact, in Julpigoree, Cooch Behar, and the Dargeeling Hill districts nearly half the stations have received less than 10 inches. Falls are generally over 15 inches in Orissa, and over 10 inches in Chutia Nagpur, but towards the north and east amounts diminish very rapidly, and it is only in a rather narrow strip of country running from the Sunderbuns in a north-westerly direction that falls are generally between five and ten inches. The only falls over 5 inches in North Behar are in Purneah and Chumparun, and in South Behar at a few scattered stations in Shahabad, Patna, South Bhagulpore, and the Sonthal Pergunnahs. The districts where rain has been most scanty are North Bhagulpore, Durbhunga, and Mozufferpore, falls being frequently less than 3 inches. No rain has been registered during the month at Siuhar, in Mozufferpore, the falls at this station during the two previous months having been 11 inches and 7 inches respectively. The stations in North Bengal which have received less than 3 inches are Pubna, Beauleah, Dinagepore, Baloorghat, Kurigram, and Bagdogra, and more than half the stations have received less than 5 inches. In East and South-West Bengal falls are generally between 5 and 10 inches.

Percentage Table for September 1891.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 17th of October 1891.

Explanation.—......indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 20th October* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING SATURDAY, THE 17TH OF OCTOBER 1891.

FINE settled weather has prevailed throughout the week, with clear skies, low temperature especially at night, and an almost total absence of rain. At the commencement of the week the pressure distribution was very favourable for the continuance of northerly winds and clear dry weather, as readings were lowest in the south of Madras and gradually increased to the foot of the Himalayas, and from being slightly below the normal in the south they were more than a tenth of an inch in excess in Behar. The wind circulation was very light, but there was a decided northerly element in all districts except Behar, where calms or light variable airs prevailed. In Lower Bengal the easterly element was most pronounced; this, however, disappeared after a day or two and north or north-westerly winds prevailed. Pressure slowly fell and gradients became steadily more slight towards the end of the week, but the general character of the distribution remained unchanged, readings being highest in the north and lowest in the extreme south of Madras. While this arrangement of pressure and winds obtained, the air became drier, only very light cloud appeared, and temperature, though normal or slightly above during the day, was considerably below the normal during the night. Oscillations in both temperature and pressure during the week were very unimportant and, in fact, all meteorological conditions have been unusually settled.

Pressure.—As stated above, pressure oscillated very slightly during the week. There being a large excess at the beginning, readings were never below the normal, but as there was a general downward tendency, the difference from the normal was smaller at the end of the week, and nowhere above a twentieth of an inch. From the 11th till the 13th there was a very slow rise, a moderate fall prevailed on the 14th, a slow fall on the 15th, and on the 16th and 17th small irregular changes. Means for the week are above the normal by about ·08 inch in all districts except Assam, where excess is small in the extreme east and about ·05 inch in the western half.

Temperature—Changed irregularly during the first half of the week, rising and falling in the northern and southern districts on alternate days. Then an almost general fall prevailed of between 1° and 2°, continuing on the 15th especially in Lower Bengal, after which irregular changes began again and continued till the end of the month. Lowest readings were recorded in Lower Bengal and Assam on the 17th and in the northern districts on the 11th or the 13th. On the 17th defect in mean temperature in all districts except Behar was nearly 3°, and this was almost entirely due to low temperature at night, defect in minimum readings being in some places as much as 8°. Means for the larger divisions are all below the normal, 2·6° in North Bengal, 2° in North Behar, 1·9° in East Bengal, and 1° or more in all the other districts except South-West Bengal, where defect is ·8°.

Rainfall.—No rain has fallen in North Bengal or North Behar, and only a few light showers in the other districts except Orissa, where an average of nearly half an inch has been received. In South-West Bengal the mean fall is ·08 inch, in South Behar ·05 inch, and in East Bengal and Chutia Nagpur ·02 inch. Thus the greater part of the province has been practically rainless, and the larger fall in Orissa is due to thunderstorms which were fairly general in the Cuttack and Balasore districts on the 15th.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 17th of October 1891:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th Oct. 1891.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

△ dew.

FINANCIAL RESOLUTION 1891-92.

FINANCIAL DEPARTMENT—FINANCE.

No. 4501.

Darjeeling, the 26th October 1891.

RESOLUTION.

IN a Resolution dated the 17th April 1891, immediately after receiving the orders of the Government of India on the Budget Estimates for the currrent year, the Lieutenant-Governor reviewed the financial results of the quinquennial period covered by the contract of 1887, which expires with the present year. The Accountant-General's figures for March 1891 had not then been issued, and the estimates for 1891-92 were therefore framed with reference to the preliminary figures for ten, and in some cases eleven, months of the preceding year. The Accountant-General's Appropriation Report on the accounts of 1890-91 has now been received, and his unadjusted figures for the first five months of the current year are sufficient to form the basis of a review of the Revised Estimate for 1890-91 and the Budget Estimate for the current year. The usual examination of the general financial position of the Province need not therefore be postponed.

REVISED ESTIMATES, 1890-91.

2. The following statement shows the revised estimates as adopted in the Resolution of the 17th April and the estimates now passed with reference to the approximate actuals of the year :—

Receipts.	Revised Estimate—	
	Passed by the Government of India and adopted in the Resolution of 17th April 1891.	Now passed.
	Rs.	Rs.
Opening balance	36,76,000	36,77,000
Principal Heads of Revenue—		
I.—Land Revenue { Proper .	99,18,000	99,95,000

Provincial surplus (+) or deficit (—).	—4,15,000	—3,00,000

RECEIPTS.

3. *Land Revenue.*—The latest return from the Accountant-General shows that the total collections during 1890-91 amounted to Rs. 3,88,20,000, against Rs. 3,84,74,000 passed by the Government of India as the revised estimates for the year. The 10 per cent. collections from Government estates aggregated Rs. 3,87,000, and the Provincial share of land revenue is therefore one-fourth of (Rs. 3,88,20,000 — Rs. 3,87,000) *plus* Rs. 3,87.000, or Rs. 99,95,000. The adjustments between Imperial and Provincial will probably result in a net deduction of Rs. 21,80,000, as shown below—

	Revised estimate of the Government of India.	Revised estimate now adopted.
	Rs.	Rs.
Fixed contribution to Imperial	—6,90,000	—6,90,000
Special benevolence to Imperial	—10,00,000	—10,00,000
Hidgellee Tidal Canal	+1.52,000	+1.53,000
Interest on exchange, State Railways	+93,000	+93,000
Inter-Provincial adjustments	+73,000	+1,29,000
Adjustment for Shahjehanpore rum	+35.000	......
Duty on Bengal-made rum	—9,000	—11,000
Half the cost of the Special Branch of the Police Office	+5,000	+5,000
Adjustment for ganja exported	—21,000	......
Custom House Appraisers	+8,000	+8,000
Conservation of ancient monuments	+1,000	+1,000
Petroleum wharf establishment at Budge-Budge ...	+4 000	+4,000
Eastern Bengal Railway Police	+41,000	+41,000
Political charges	+21,000	+21,000
Calcutta Police	+2,00,000	+2,00.000
Forest survey charges	—3,000	—3,000
New method of testing distillation of imported spirits	+3,000	+3 000
Duty levied under Succession Act VII of 1889 on probates, letters-of-administration, and certificates under Act XXVII of 1886 during 1890-91	......	—1,71.000
Adjustment on account of the new classification of rewards out of criminal fines in excise and stamp cases	—30,000	—33,000
Up-keep of the *Rhotas*	+9 000	+9,000
Interest on Hidgellee Tidal Canal	—6,000	—6,000
Net earnings of the Bengal and North-Western Railway	—4,00,000	—9,39,000
Adjustment of the loss in rents from the Burrakur Iron Works	......	+6,000
Total ...	—15,14,000	—21,80,000

4. The only new credit which has been taken under this head under the orders of the Government of India, Public Works Department, No. 4387A., dated 19th December 1890, is on account of the receipts and charges connected with the land pertaining to the Burrakur Iron Works' property, which has been leased to the Bengal Iron and Steel Company, Limited. The rents realized from the Company during 1890-91 amounted to Rs. 281, and the rent paid Rs. 6,626, showing a loss of Rs. 6,345 to the Provincial revenues. But against this credit there has been a debit of Rs. 1,71,000, on account of the duty levied in stamps under the Succession Act VII of 1889 on probates, letters-of-administration, and certificates under Act XXVII of 1886; and the debit of Rs. 4,00,000, which was allowed for in the estimate of the Government of India on account of the net profits of the Bengal and North-Western Railway Company for the last quarter of 1890-91, has been raised to Rs. 9,39,000, as the Company's share of the profits for the preceding half-year ending 31st December 1890, amounting to Rs. 5,39,000, was not paid until May of the current year.

5. *Stamps.*—The Provincial receipts from stamps amounted to Rs. 1,06,86,000, against Rs. 1,07,63,000, the revised estimate of the Government of India. The decrease was under "court-fee stamps," and was due to the fall in the number and value of suits instituted.

6. *Assessed Taxes.*—The revised estimate under this head was placed at Rs. 42,00,000, against Rs. 41,67,000, the actuals of 1889-90. The percentage of collection on the final demand for the income-tax rose from 92·5 in 1889-90 to 93·3 in 1890-91, and the actuals in the latter year amounted to Rs. 42,39,000. The revised estimate of the Provincial share has accordingly been placed at Rs. 21,19,000.

7. *Jails.*—The final accounts of 1889-90 show that the receipts from Jails in that year amounted to Rs. 8,60,000, against Rs. 5,60,000 exhibited in the preliminary accounts of March 1890. The preliminary account of March 1891 shows that the receipts for the last year were only Rs. 4,90,000. The adjustment made up to August shows that the total amounted to Rs. 7,67,000. The bills of the Jail Departments for manufactures supplied to other departments during 1890-91 have not probably been yet all adjusted; but looking to all circumstances, the Lieutenant-Governor does not think that it will be safe to take more than Rs. 8,50,000 as the approximate figure for the year.

8. *Stationery and Printing.*—The receipts under this head amounted to Rs. 2,94,000, against Rs. 1,37,000, the revised estimate passed by the Government of India. The increase was under "Other Press receipts," and was due to the sale of census forms to other Provinces and Administrations.

9. *Railways.*—The following statement compares the revised estimates as passed by the Government of India and those now adopted :—

	Revised estimate passed by the Government of India.	Approximate actuals.
	Rs.	Rs.

Total Provincial net receipts ...	70,18,000	74,97,455

10. The fourteenth report of the Directors of the Bengal and North-Western Railway Company contains the Capital and Revenue Accounts of the Tirhoot and Bengal and North-Western Railway for the half-year ending 31st December 1890, and shows the first half-year's working since the Tirhoot State Railway was made over to the Company. The gross earnings of the combined undertaking for the half-year amounted to Rs. 19,75,209 against Rs. 18,65,683, the earnings of the corresponding period of 1889, showing an increase of Rs. 1,09,526, of which Rs. 1,05,623 has been contributed by the Tirhoot State Railway, and the balance, Rs. 3,903, by the Company's line. The increase is attributable to the opening of the Sitamarhi branch and Kosi extension of the Tirhoot Railway. The working expenses of the combined undertaking amounted to Rs. 9,75,394 against Rs. 10,04,730 for the half-year ended 31st December 1889, and were 49·38 per cent. of the gross earnings against 46·40, the percentage for the Tirhoot line, and 61·86 for the Bengal and North-Western Railway, or an average of 53·85 for the two railways in the corresponding period of 1889. The net profits for the half-year amounted to Rs. 9,99,815, and this has been divided under the terms of the contract with the Company, the share of the Tirhoot line, amounting to Rs. 4,60,653 and that of the Company's Rs. 5,39,162, against Rs. 5,17,787 and Rs. 3,43,166 respectively, the net earnings of the two lines for the corresponding period of 1889. This result has been obtained notwithstanding that the additional length of line opened was on the Tirhoot side. The total mean mileage worked during the half-year was 692·62, of which 376 belonged to the Company's line and 316·62 to the Tirhoot line. Dividing the total gross working expenses in proportion to the mileage worked for the two lines, the share of the working expenses of the Tirhoot line amounts to Rs. 4,45,886, and deducting this from the gross earnings of the line, the net profits come to Rs. 6,25,711. The difference between this amount and Rs. 4,60,653 actually credited, or Rs. 1,65,058, represents the loss to the Provincial revenue for the half-year by the transfer of the management of the Tirhoot line to the Company. Calculated on this principle, the working expenses of the Bengal and North-Western Railway during the last quarter of 1890-91 would amount to Rs. $\frac{376}{698\cdot 62}$ × 4,77,973 (joint working expenses) = 2,57,247, and the net profits to Rs. 5,97,724 — 2,57,247 = 3,40,724. But as the share of the Company's net receipts under the contract has been estimated by the Government of India at Rs. 4,00,000, and a deduction of this amount has already been made from the Provincial share of Land Revenue, the Provincial revenues are entitled to recoupment of the loss for the last quarter, amounting to Rs. 4,00,000—3,40,724=59,276. A credit for Rs. 1,65,058+59,276= 2,24,334 has accordingly been provisionally taken under this head, subject to final

adjustment under the orders of the Government of India who have been separately addressed on the subject in letter No. 382T.—F., dated 26th October 1891.

The total Provincial receipts would amount to Rs. 1,49,24,000, thus—

	Rs.
Eastern Bengal	76,72,503
Less excess over the contract assignment ...	15,59,448
	61,13,055
Other sections of the Eastern Bengal System ...	45,28,613
Nalhati	1,00,084
Tirhoot	6,19,828
Tirhoot and Bengal and North-Western Railway ...	33,37,719
Credit for loss to Provincial by the transfer of Tirhoot line to the Bengal and North-Western Railway Company	2,24,334
Total ...	1,49,23,633
or in round numbers ...	1,49,24,000

11. *Civil Works.*—The original estimate of the Public Works Department under this head for 1890-91 was Rs. 1,50,000. Subsequently a plot of land on the north-west corner of the Custom House premises in Calcutta was made over to the East Indian Railway Company for the extension of their office buildings on payment of Rs. 3,17,041. The revised estimate was therefore placed at Rs. 4,67,000. The actual receipts have, however, amounted to Rs. 4,72,000.

EXPENDITURE.

12. *Land Revenue.*—The Accountant-General's preliminary account shows that the total expenditure under this head amounted to Rs. 33,96,000, against the revised estimate of Rs. 37,16,000, the charges for the survey and settlement amounting to Rs. 1,83,000 only, against Rs. 4,90,000, the revised estimate passed by the Government of India. As the adjustments between the Imperial and Provincial accounts on account of the professional surveys have not yet been completed, the estimate passed by the Government of India has been retained.

13. *Salt.*—The original estimate under this head, amounting to Rs. 30,000, was raised to Rs. 93,000 in the Financial Resolution, dated the 19th October 1890, to provide for the cost of a shunting line directly connecting the golahs with the East Indian Railway, and for the regrant of Rs. 51,425 for the purchase of Mr. Kilby's patent scales for the weighment of salt. But the total expenditure amounted to Rs. 68,000, the decrease being due to Rs. 29,431 only having been spent in the purchase of new scales.

14. *Provincial Rates.*—The total expenditure under this head exceeded the estimate by Rs. 26,000. The revised estimate now amounts to Rs. 4,06,000.

15. *Police.*—The revised estimate of the Government of India under this head is Rs. 52,58,000, but the total expenditure amounted to Rs. 58,42,155. The increase is due to the inclusion of the charge, amounting to about 5⅛ lakhs, connected with the Chin Lushai expedition incident to the formation of the South Lushai Hills district. The question of final adjustment of these charges is under consideration, and pending its settlement the charges have been eliminated from the Provincial account.

16. *Marine.*—The total expenditure under this head amounted to Rs. 9,40,000, against Rs. 9,16,000, the revised estimate accepted by the Government of India. The increase was under "Pilotage, Pilot establishments and vessels, and Marine establishments."

17. *Education.*—There has been an increase of expenditure under "Government Colleges—both General and Professional" and "Grants-in-aid." The total charges amounted to Rs. 25,25,000, against the estimate of Rs. 24,86,000.

18. *Stationery and Printing.*—The cost of stationery supplied from Central Stores in 1890-91 amounted to Rs. 6,52,000, against Rs. 5,35,000 provided for in the budget, and the total expenditure, Rs. 11,51,000, against Rs. 10,50,000, the estimate passed by the Government of India.

19. *Civil Works in charge of Civil Officers.*—The expenditure under Ferries amounted to Rs. 8,000, against a provision of Rs. 29,000, and the total revised

estimate now stands at Rs. 64,000, against Rs. 94,000, the amount provided in the estimate.

20. *Closing Balance.*—According to the revised estimates now adopted, the closing balance will stand at Rs. 33,77,000, against Rs. 32,61,000 anticipated by the Government of India when passing the estimates for the current year.

BUDGET ESTIMATE, 1891-92.

21. Turning now to the estimates of the current year, as modified by the latest information, the following table shows the estimates of the Government of Bengal as originally framed, the figures accepted by the Government of India, and the estimates which the Lieutenant-Governor has finally resolved to adopt:—

RECEIPTS.	Original estimate of the Government of Bengal.	Estimate passed by the Government of India.	Estimate now adopted.

RECEIPTS.

22. *Land Revenue.*—The Government of India have accepted the estimate of total collections under this head as passed by the Local Government for 1891-92, amounting to Rs. 3,82,50,000, against Rs. 3,88,20,000, the actuals of 1890 91. The collections in the first five months of the current year amounted to Rs. 70,38,000, against Rs. 74,67,000 in the corresponding period of last year. The falling off is due to the arrear demand collected in the first quarter of 1891-92, being Rs. 17,85,164 against Rs. 22,46,426 in the corresponding period of 1890-91. Full allowance had been made for this short collection in the original estimate, which is the same as the contract figure, and will be retained.

	Rs.
*1887-88 ..	3,80.01.000
1888 89 ...	3.73.73,000
1889-90 ...	3,88.82,000
1890-91 ...	3,88.20,000
1891-92 ...	3,82,50,000
Total of 5 years	19,13,26,000
Average per year	3,82,65,000

The average receipts during the quinquennial period covered by the present contract have amounted to Rs. 3,82,65,000,* and for the purpose of the next contract it will not be safe to take a higher figure in fixing the assignment under this head. The percentage on collections from Government estates for their management and improvement has been raised from 10 to 12 under orders of the Government of India, Home Department, No. 196, dated the 29th May 1891, in order to provide for sanitary improvements in villages, and the estimate under this head has accordingly been raised from Rs. 3,90,000 to Rs. 4,68,000. The Provincial share of Land Revenue (proper) will therefore amount to one-fourth of (Rs. 3,82,50,000 - 4,68,000) + Rs. 4,68,000, or Rs. 99,14,000 against Rs. 98,55,000, the original estimate. The adjustments between Provincial and Imperial according to the estimate of the Government of India will afford a net credit for Rs. 31,000 to the former, and in the absence of any later information, this figure will be retained. The details are as follows:—

Transfers—	Rs.
From Imperial to Provincial—	
Interest on exchange added to Capital Account	93,000
For Shahjehanpore rum	36,000
For Hidgellee Canal	3,07,000
Inter-provincial adjustment	82,000
Half of the costs of the special branch of the Police Office	5,000
For two Custom House Appraisers	8,000
Conservation of ancient monuments	1,000
Additional assignment for carrying out provision of the Petroleum Act II of 1880	4,000
Additional grant for the Eastern Bengal Railway Police	41,000
On account of all ordinary political charges	21,000
Assignment for Calcutta Police	2,00,000
For new method of testing the strength of imported spirits	3,000
For up-keep of the *Rhotas*	9,000
	+8,09,000
From Provincial to Imperial —	
Adjustment under the Contract	6,90,000
Adjustment for ganja exported	21,000
For Forest Survey charges	8,000
For duty on rum exported to Assam...	10,000
On account of the new classification of rewards out of criminal fines in Excise and Stamps cases	40,000
Interest on Hidgellee Canal	14,000
	(—) 7,78,000
Net Transfers ...	+31,000

23. In addition to these adjustments, an application has been made to the Government of India for an assignment of Rs. 11,000 on account of additional remuneration paid to Mr. J. C. Macgregor, Receiver of the High Court, equal to three-tenths of the net profits derived by Government from the receipts of his office. Additional grants have also been asked for to meet the increase of charges under survey and settlements over the contract allotment for five years from 1887-88 to 1891-92, and for improvements in the Judicial Service effected by increasing the number of Subordinate Judges and Munsifs. Pending the orders of that Government, no credit has been taken for these sums.

24. *Salt.*—The receipts during the first five months of 1891-92 amounted to Rs. 49,387, against Rs. 50,633 obtained in the corresponding period of 1890-91. The total receipts in last year amounted to Rs. 1,28,000, and although some increase is anticipated from the improvements in the Sulkea Golah when com-

pleted, the Lieutenant-Governor does not think that it will be safe to place the estimate for the current year at a higher figure than Rs. 1,35,000, which has accordingly been adopted, against Rs. 1,50,000 originally estimated.

25. *Stamps.*—The total revenue from stamps has been estimated at Rs. 1,45,00,000, showing an increase of Rs. 2,52,000 over the approximate actuals of last year which amounted to Rs. 1,42,48,000. The Comptroller-General's latest statement shows that the receipts during the first five months of the current year have exceeded those of the corresponding period of last year by Rs. 4,42,000, and the increase is almost entirely under court-fees; but looking to the prospects of the season, the Lieutenant-Governor does not think it safe to provide for a larger increase than has already been allowed for in the estimate of the Government of India, which will accordingly be retained. The Provincial share will amount to Rs. 1,08,75,000.

26. *Excise.*—The original estimate of receipts under this head for 1891-92 amounts to Rs. 1,05,00,000, against Rs. 1,04,65,000, the revised figure for 1890-91, as it now stands. The result of the recent settlement of excise shops for 1891-92 shows an increase of more than two lakhs in "License fees" as compared with that of the last year. The estimate will be raised to Rs. 1,06,00,000, and the Provincial share to Rs. 26,50,000.

27. *Provincial rates.*—The following statement compares the receipts under his head in past years :—

	1887-88.	1888-89.	1889-90.	1890-91.	Estimate, 1891-92.
	Rs.	Rs.	Rs.	Rs.	Rs.
(1) Public Works cess ...	38,20,000	37,98,000	39,12,000	38,94,000	40,00,000
(2) General management of Wards' Estates	1,03,000	90,000	82,000	71,000	82,000
(3) Recoveries from District Funds of the proportionate cost of establishment for collecting cess ..	3,14,000	2,68,000	3,12,000	3,55,000	3,20,000
Total ...	42,37,000	41,56,000	43,06,000	43,20,000	44,02,000

28. The latest returns submitted by district officers show an increase of about Rs. 16,000 under "Public Works Cess" collections in the first five months of the current year as compared with those of the corresponding period of last year. The actuals in 1890-91 amounted to Rs. 38,94,000. The estimate of Public Works cess for the current year will be placed at Rs. 39,25,000, and the total at Rs. 43,27,000. The recoveries from District Funds of the cost of collecting Road cess amounted to Rs. 3,55,000 in 1890-91, but as these erroneously included in some cases arrear contributions for pensions of Government officers transferred to District Boards, the original estimate of Rs. 3,20,000 for the current year has been retained.

29. *Customs.*—The estimate under this head amounts to Rs. 56,000, against Rs. 58,000, the latest estimate for 1890-91. The average of the past four years amounts to Rs. 55,000. The estimate will be retained.

30. *Assessed Taxes.*—Both the revised estimate for 1890-91 and the estimate for 1891-92, as passed by the Government of India, amount to Rs. 42,00,000. The actual receipts in 1890-91 amounted to Rs. 42,39,000, but the collections in the first five months of the current year show a decrease of Rs. 2,02,000 as compared with those of the corresponding period of last year. The decrease is mainly in Calcutta and in the Dacca Division. It would perhaps be premature to assume that the collections will not come up to the estimate of the Government of India, though it is unlikely that the amount realized last year will be obtained. The estimate of the Provincial share will accordingly stand at Rs. 21,00,000.

31. *Forests.*—The Conservator of Forests anticipates an increase of Rs. 35,000 over the sanctioned estimate in consequence of 3,000 standing sâl trees supplied to the Bengal-Nagpore Railway. The Provincial share has accordingly been raised from Rs. 3,90,000 to Rs. 4,07,000.

32. *Registration.*—The estimate under this head amounts to Rs 12,50,000, against Rs. 12,39,000, the approximate actuals of 1890-91. The actuals in the first five months of the current year show an increase of Rs. 31,000 over those of the corresponding period of last year; but looking to the prospects of the season, the Lieutenant-Governor is not sure that this rate of increase will be maintained throughout the year. The estimate will, however, be raised to Rs. 12,70,000 and the Provincial share will stand at Rs. 6,35,000.

33. *Law and Justice.—Courts of Law.*—The Government of India placed both the revised estimate for 1890-91 and the estimate for 1891-92 at Rs. 8,50,000. The receipts in 1890-91 were Rs. 8,96,000, but these included a special credit of Rs. 58,000, paid into the Purneah treasury on account of the value of Court-fee stamps. The receipts in the first five months of the current year show a decrease of Rs. 20,000 as compared with those of the corresponding period of last year. Looking to all the circumstances, the Lieutenant-Governor would place the estimate at Rs. 8,20,000.

33. *Jails.*—The original estimate under this head amounts to Rs. 11,05,000 against Rs. 8,50,000, the latest estimate for 1890-91. The receipts in the first five months of the current year show an increase of Rs. 41,000 only over those of the corresponding period of last year; and although the recent orders of the Secretary of State will lead to a larger supply of the requirements of the public consuming departments by the Jail Department, the experience of past years does not justify a provision for a larger increase than a lakh and a half over the receipts for the current year. The estimate will be placed at Rs. 10,00,000.

34. *Police.*—The latest revised estimate for 1890-91 stands at Rs. 4,56,000. The receipts during the first five months of the current year show a decrease of Rs. 31,000 as compared with those of the corresponding period of last year. The estimate of the Government of India, amounting to Rs. 4,30,000, will be retained.

35. *Medical.*—The receipts under this head in 1890-91 amounted to Rs. 1,43,000. The same figure will stand as the estimate for the current year.

36. *Scientific and other Minor Departments.*—The receipts under this head in 1890-91 amounted to Rs. 1,77,000, and in the first five months of the current year show an increase of Rs. 38,000 over those of the corresponding period of last year. Some slight increase is also anticipated from the extension of the supply of quinine from Government factory to municipal and other local dispensaries, which at present buy the drug at a higher price than is charged for the Government preparation. The estimate will be raised from Rs. 1,54,000 to Rs 1,80,000.

37. *Superannuations.*—The estimate of receipts under this head for 1891-92 amounts to Rs. 68,000, against Rs. 1,26,000, the revised estimate for 1890-91 as it now stands. The receipts of last year comprised arrear contributions received on account of the employés of District Boards whose services had been declared to be qualifying for pension. But these contributions are subject to refunds in consequence of the recent orders of the Government of India, under which no contributions are payable by the officers of the Education Department who have been transferred to District Boards along with the schools to which they were attached. The original estimate will be retained.

38. *Miscellaneous.*—The estimate of receipts amounts to Rs. 7,97,000, against Rs. 7,69,000, the approximate actuals of 1890-91. The receipts in the first five months of the current year show a decrease of nearly Rs. 45,000 as compared with those of the corresponding period of last year. Judged by this standard, the estimate might be reduced to Rs. 7,50,000. But as a sum of Rs. 30,000 has just been paid by Baboo Shew Bux Bogla in aid of the proposed establishment of a veterinary school and hospital for cattle in the vicinity of Calcutta, the estimate will be placed at Rs. 7,80,000.

39. *Railways.*—The following statement compares the estimate of the Government of India with the latest estimate for 1890-91:—

	1890-91. Latest estimate.	1891-92. Estimate passed by the Government of India.

Add—		
For loss to Provincial revenues by the transfer of the Tirhoot line to the Bengal and North-Western Railway ...	2,24,334	......
Total Provincial Receipts ...	67,82,627	67,59,000

* This share for nine months has been adjusted under Land Revenue in the accounts of 1890-91.

The high receipts of 1890-91 were due to the influx of coaching traffic on the occasion of the Ardhodoya Joga bathing festival in the latter part of the year, which is not expected to occur in the current year. The returns from the Examiners of Accounts show but a small increase in the receipts of the Eastern Bengal System, but present more favourable results on the Tirhoot and Bengal and North-Western Railways. There are, however, no sufficient materials to justify any alteration of the estimates so as to affect the Provincial share of net receipts; but a credit for three lakhs will be taken provisionally under this head for the loss to the Provincial revenues caused by the transfer of the management of the Tirhoot line to the Bengal and North-Western Railway Company for which no provision was made in the original estimate. As has been stated in paragraph 10 above, the Government of India have been specially addressed on this point, and the Lieutenant-Governor has expressed his readiness to accept their decision as to the method in which the loss to Provincial revenues should be calculated. For the purposes of the estimate dealt with in this Resolution, it is, however, necessary to assume a definite figure, and the estimate of Provincial gross receipts has accordingly been taken, subject to the results of the reference which has been made to the Government of India, at Rs. 1,67,00,000+3,00,000—11,80,000=Rs. 1,58,20,000.

40. *Irrigation, Major Works.*—The latest revised estimate for 1890-91 amounts to Rs. 13,47,000, and the estimate for the current year Rs. 14,19,000.

The receipts in the first three months of the current year show an improvement of Rs. 33,000 over those of the corresponding period of last year. The estimate will be retained.

41. *Civil Works.*—The average ordinary receipts of the Public Works Department amount to Rs. 1,50,000. A special credit for Rs. 80,000 has been allowed under this head on account of the contribution payable by the Darjeeling-Himalayan Railway Company towards the maintenance of the Hill Cart Road out of their surplus profits for the two years ending 30th June 1891. The estimate for 1891-92 therefore stands at Rs. 2,30,000.

EXPENDITURE.

42. *Land Revenue.*—The original estimate of the Local Government amounts to Rs. 38,36,000, which has been raised by the Government of India by Rs. 72,000 to provide for increased expenditure under survey and settlement charges. The estimate has further been raised by Rs. 78,000, being the 2 per cent. on collections from Government estates for sanitary improvements. The estimate now stands at Rs. 39,86,000.

43. *Salt.*—The estimate under this head, amounting to Rs. 31,000, has been raised by Rs. 21,994, being the amount of regrant of the unspent allotment sanctioned last year for the purchase of Kilby's salt-weighing scales in Calcutta. The total grant will stand at Rs. 52,000.

44. *Excise.*—The Government of India have adopted the estimate under this head as passed by the Local Government, amounting to Rs. 6,81,000. The estimate includes the necessary provision for the salary of 21 Deputy Collectors now employed on special Excise duty in Bengal. There is, however, no provision for the travelling allowance and other charges of the two Deputy Collectors employed as Inspectors of Excise, and for other small increases of establishments sanctioned in the several districts. The establishment of the Excise Department is under revision, but pending final orders the estimate will be placed at Rs. 6,88,000 to meet the new charges mentioned above. The Provincial share will stand at Rs. 1,72,000.

45. *Assessed Taxes.*—The estimate under this head provides for the salary of a separate Collector of Income-tax in Calcutta. As there is no probability of the new appointment being made during the current year, the estimate will be reduced from Rs. 1,98,000 to Rs. 1,93,000. The Provincial share will stand at Rs. 97,000.

46. *Forests.*—The Government of India have raised the original estimate under this head by Rs. 15,000 to provide for changes in the staff sanctioned by the Secretary of State. The total grant stands at Rs. 4,69,000. The Conservator has asked for the regrant of Rs. 14,000 for the cost of a steamer for the Sunderbuns Division, which was provided for in last year's budget, but which could not be utilized in that year, as the Marine Department could not comply with the requisition. The Provincial grant will be raised from Rs. 2,35,000 to Rs. 2,41,000

47. *Interest on Ordinary Debt.*—The estimate of loans and advances sanctioned by the Government of India places Rs. 25,06,000 at the disposal of the Local Government, including the opening balance of 1890-91, and provides for net outgoings of Rs. 7,79,000. The closing balance at the end of the year is thus estimated at Rs. 32,85,000, and the mean balance at Rs. 28,95,000. Interest at 4 per cent. on this amounts to Rs. 1,15,800, and Rs. 1,16,000 has been taken as the amount payable to the Government of India during the current year. Pending the submission of revised estimates for the current year which are under preparation, the original estimate will be retained.

48. *Law and Justice, Courts of Law.*—The estimate passed by the Government of India amounts to Rs. 85,05,000, against Rs. 82,39,000, the latest estimate for 1890-91. The estimate for the current year includes the following provisions:—

	Rs.
6 Additional Subordinate Judges, 2 on Rs. 800 and 4 on Rs. 600	48,000
55 Additional Munsifs (5 on Rs 400, 10 on Rs. 300, 15 on Rs. 250 and 25 on Rs. 200)	1,65,000
Establishment of Additional Subordinate Judges	6,000
Ditto ditto Munsifs	36,000
Contract contingencies of ditto	5,000
For improvement of the ministerial establishment of Civil Courts	50,000
Fifth Judge of the Calcutta Small Cause Court	12,000

It has been decided to sanction four extra Subordinate Judges, or one in addition to the three now temporarily employed, of which one officer will be in the second grade on Rs. 800, and the other three in the third grade on Rs. 600 each per mensem. The annual cost will be Rs. 31,200. A reduction of Rs. 16,800 will therefore be made under this sub-head. A reduction of Rs. 4,000 will also be made on account of establishment of the two Additional Subordinate Judges not sanctioned by the Government of India. As regards additional Munsifs, the Government of India have decided to sanction the full number but to place them in the following grades:—

			Now employed.	New appointments sanctioned.
First grade	...	...	(400)—75	...
Second "	...	...	(300)—70	5
Third "	...	...	(250)—65	10
Fourth "	...	...	(200)—20	40
	Total	...	235	55

The salary of the 55 officers sanctioned by the Government of India amounts to Rs. 1,44,000, against Rs. 1,65,000 provided for in the budget. A reduction of Rs. 21,000 will be made on this account. The Extra Small Cause Court Judge, Calcutta, temporarily sanctioned, is still employed in the Court, and no saving can be expected on this account. Final orders have since been passed regarding the improvement of the ministerial establishment of the Civil Courts recommended by Messrs. Stevens and Toynbee, and it has been decided that Rs. 5,000 will be sufficient provision to make on this account during the current year. Taking these reductions into account, the Lieutenant-Governor considers that Rs. 84,20,000 may fairly be taken as the revised estimate for the current year.

49. *Jails.*—The estimate passed by the Government of India amounts to Rs. 21,96,000, against Rs. 20,40,000, the latest estimate for 1890-91. The estimates of receipts and expenditure under this head are compared below with the actuals of the preceding years—

		1887-88.	1888-89.	1889-90.	Latest Estimate. 1890-91.	Budget Estimate. 1891-92.	Estimate now proposed. 1891-92.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Jails ...	Receipts ...	4,000	8,000	2,000	3,000	5,000	5,000
	Expenditure ...	10,02,000	11,47,000	13,15,000	12,52,000	12,96,000	13,80,000
	Net Expenditure ...	9,98,000	11,39,000	13,13,000	12,49,000	12,91,000	13,75 000
Manufactures..	Receipts ...	7,06,000	7,67,000	8,57,000	8,47,000	11,00,000	9,95,000
	Expenditure ...	5,29,000	6,49,000	5,84,000	7,88,000	9,00,000	8,30,000
	Net Receipts ...	1,77,000	1,18,000	2,73,000	59,000	2,00,000	1,65,000

The estimate provides for a net expenditure of Rs. 12,91,000 under Jails and for net receipts of Rs. 2,00,000 from Jail manufactures. Looking, however, to the great increase of jail population that has taken place during the last six months, the Lieutenant-Governor thinks it will be necessary to raise the net grant for Jails to Rs. 13,75,000, a net credit for Rs. 1,65,000 being taken on account of the proceeds of Jail manufactures as shown in the last column of the table above. The estimate of expenditure on Jails and Manufactures together will thus amount to Rs. (13,80,000 + 8,30,000 =) 22,10,000. But this will be raised by Rs. 700 to meet the cost of constructing a latrine for the convicts employed at the Presidency Jail Press, and reduced by Rs. 3,757, the amount made over to the Public Works Department for the construction of a corrugated iron shed at that Jail. The grant for the year will stand at Rs. 22,07,000.

50. *Police.*—The estimate of the Government of India, amounting to Rs. 53,33,000, has been raised by Rs. 1,30,000 to provide for the following

charges recently sanctioned for the improvement of the police on the recommendation of the Police Commission:—

(a) Raising the pay of the constables in the Presidency, Burdwan, Rajshahye, Dacca, and Chittagong Divisions from Rs. 6 to Rs. 7 each per mensem.
(b) Granting a free kit and increasing the clothing allowance.
(c) Abolishing deductions for superannuation fund.

The grant will stand at Rs. 54,63,000, which will be exclusive of any new charges for the Lushai country to be met from any special allotment for the purpose. An estimate of these charges is under consideration.

51. *Marine.*—The latest estimate under this head for 1890-91, amounting to Rs. 9,40,000, includes grants of Rs. 20,000 to each of the Balasore and Cuttack and Pooree Port Funds. The original estimate for the current year is Rs. 8,78,000, and includes a grant of Rs. 10,000 to the Port Funds. This estimate will be raised by Rs. 12,000 to meet the cost of the repairs of the yacht *Rhotas* which have not been fully provided for in the budget. The revised estimate will then stand at Rs. 8,90,000.

52. *Education.*—The estimate under this head, amounting to Rs. 24,94,000, has been reduced by Rs. 6,684, and a corresponding grant has been made to the Public Works Department for additions and alterations to the Darjeeling, Dumka, and Khulna Zillah School buildings, and for the repairs to the Goluckpore house at Bankipore for the Patna Survey School. Against this reduction an additional grant of about Rs. 8,000 has been made for regrants of undrawn building grants for 1890-91. The total grant now stands at Rs. 24,95,000.

53. *Medical.*—The estimate passed by the Government of India will be raised by Rs. 2,000 for the establishment of an out-door dispensary for the Campbell Medical Hospital. The revised estimate will stand at Rs. 15,53,000.

54. *Scientific and other Minor Departments.*—The estimate under this head has been reduced by Rs. 4,789, and a corresponding grant has been sanctioned to the Public Works Department for the completion of the quarters of the Curator of the Herbarium in the Royal Botanic Garden at Sibpur. On the other hand, the Government of India having discontinued their grant of Rs. 2,500 on account of sericultural experiments in Bengal, the amount has been made good by a corresponding grant from the Provincial revenues. A special grant of Rs. 5,000 will also be made for the improvement of the roads and walks in the Botanic Garden. The estimate now stands at Rs. 3,10,000.

55. *Superannuations.*—The estimate under this head amounts to Rs. 15,43,000. The actual charges in past years amounted to—

		Increase.	
	Rs.	Rs.	Rs.
1886-87	12,68,000	... .	
1887-88	12,80,000	12,000	
1888-89	13,70,000	90,000	
1889-90	14,36,000	66,000	
1890-91	15,14,000	78,000	
1891-92 ... ... (estimate)	15,43,000	———	2,46,000

The increase in the last four years amounted to Rs. 2,46,000, or an average of Rs. 61,000 a year. The actuals in the first five months of the current year show an increase of Rs. 41,000 over those of the corresponding period of last year, and justify the estimate being raised to (Rs. 15,14,000 + 61,000=) Rs. 15,75,000.

56. *Construction of Railways.*—An additional grant of Rs. 6,856 has been sanctioned for the erection of certain bridges and embankments for the safety of the Kaunia-Dhurla State Railway line, which has raised the estimate from Rs. 5,000 to Rs. 12,000.

57. *Minor Works and Navigation by Public Works Department.*—An additional grant of Rs. 80,000 has been sanctioned to the Public Works Department to meet the cost of the following urgent works—(1) Godagari road embankment; (2) removing embankments on the right bank of the Damuda; (3) tug for the Midnapore Canal; (4) survey of Gogra river; and (5) construction of a retired line for the safety of the Chumparun embankment. A transfer of Rs. 14,000 has also been made from Major to Minor Works, and the estimate now stands at Rs. 17,87,000.

58. *Civil Works.*—The grant for Provincial Civil Works for the current year was originally fixed at Rs. 37,00,000, and the preliminary budget was prepared for that sum, but subsequently in a letter from the Public Works Department of this Government, No. 540A., dated the 20th February 1891, the Public Works Department of the Government of India were requested to raise the estimate by Rs. 3,17,000, being the proceeds of a portion of the site of the Custom House buildings sold to the East Indian Railway Company and credited to Provincial revenues in the accounts of 1890-91, on the distinct understanding that the amount would be spent on the erection of a new building for the Calcutta Collectorate and for the improvement of the Custom House. The amount was also included in the statement of alterations in the estimates submitted to the Finance and Commerce Department in this Department letter No. 1299, dated the 9th March 1891. The works have already been taken in hand, and the amount will be placed at the disposal of the Public Works Department. A further grant of Rs. 2,00,000 will be required for the extension of the Park Street cemetery in Calcutta, the construction of a Veterinary School and Hospital, the building of a combined zillah and Bhutea school at Darjeeling and other urgent unforeseen charges not provided for in the estimate. This and other small additions already made have raised the grant to Rs. 43,00,000, thus—

	Rs.	Rs.
As provided in the estimate of the Government of India		37,00,000
Add—		
For the construction of a subsidiary jail at Thakoorgaon in Dinagepore	5,000	
For the completion of the quarters of the Curator of the Botanic Garden, Sibpur	4,789	
For additions and alterations to the Darjeeling zillah school building ...	1,448	
For additions and alterations to the Dumka zillah school building	276	
For the construction of a new building for Khulna zillah school	3,360	
For the repairs to the Goluckpore House at Bankipore for the accommodation of the Patna Survey school	1,600	
For the construction of a corrugated iron shed in the Alipore Jail	3,757	
For the purchase of a building for the accommodation of the Deputy Superintendent, Lock Hospital, Alipore	2,000	
For the construction of the Calcutta Collectorate, &c.	3,17,000	
For construction of Lebong Road	25,000	
For Terai Section of Hill Cart Road, Darjeeling ...	10,000	
For Durbar Hall, Darjeeling	15,000	
For increase to stock	5,000	
For minor works, Jails	10,000	
For the extension of Park Street cemetery and other works	2,00,000	
		6,04,230
	Total	43,04,230
Deduct—		
Amount transferred to the District Board of Hooghly for the completion of the bridge over the Kunti Khall on the Grand Trunk road at Mugrah	...	3,800
Total	...	43,00,430
or in round numbers ...		43,00,000

59. *Contributions.*—The grants made to several District Boards to establish equilibrium between the receipts and charges transferred to their management amount to Rs. 4,44,735, and the special grants made to certain Boards for the

maintenance of roads transferred to their charge amount to Rs. 2,45,720. The following further grants have also been sanctioned for the current year:—

	Rs.	Rs.
District Board, Hooghly, for a bridge ...	3,800	
Ditto, Julpigoree, for roads ...	14,000	
Ditto, Balasore, for roads	8,200	
Ditto, Gya, for the support of the Arwal dispensary	600	
District Board, 24-Pergunnahs, for the erection of the Diamond Harbour dispensary ...	3,500	
District Board, Jessore, for arrears of contribution not drawn	21,494	
District Board, Shahabad, for Government share of the cost of cess revaluations	851	
District Board, Moorshedabad, for Government share of the cost of cess revaluations ...	1,853	
District Board, 24-Pergunnahs, for the Diamond Harbour Road subject to reduction of Rs. 6,000 a year from the fixed grant for the next 5 years	30,000	
		84,298

The grants to the District Road Funds amount to Rs. 8,148 and to the non-cess districts Rs. 59,000. These make a total of Rs. 8,41,901; and as some provision is necessary to meet unforeseen demands, such as the payment of arrears of contribution, the estimate under this head has been raised from Rs. 8,30,000 to Rs. 8,67,000.

60. *Closing balance.*—According to the estimate passed by the Government of India, it was expected that the year would close with a credit balance of Rs. 31,47,600. According to the estimate now adopted, the closing balance will be Rs. 25,16,000, against an opening balance of the year amounting to Rs. 33,77,000.

61. The following statement shows in a compact form the result of the operations of the five years' contract which expires with the current year, and their effect on the Provincial revenues of Bengal:—

Receipts in thousands of rupees.									Outgoings in thousands of rupees.							
Contract assignments.			Actuals of three years, 1887-88 to 1889-90.	Latest estimate, 1890-91.	Estimate, 1891-92.	Total of five years.	Net result, more (+) or less (−).	Budget heads. ......	......	......	......	......	......	......	......	Surplus (+) or deficit (−).	......	......	......	(+)16,77	(−)3,00	(−)8,61	(+)5,16	......

62. The result of the first three years, of which the accounts have been finally closed, shows a net improvement of Rs. 37,06,000 under Railways (Revenue Account), of Rs. 18,05,000 under Revenue Heads, and of Rs. 2,70,000 under Miscellaneous; while the net expenditure on Civil Works and Irrigation exceeded the contract assignment by Rs. 15,97,000 and Rs. 19,85,000 respectively, exclusive of the grants made to District Boards amounting to Rs. 3,59,000 for maintenance of provincial roads transferred to their management. In Civil Departments the net increase of expenditure on General administration was Rs. 49,000; on Judicial Courts, Rs. 1,02,000; Jails, Rs. 2,35,000; Police, Rs. 17,08,000; Marine, Rs. 6,04,000; and Medical, Rs. 1,01,000. Against these increases there has been a net decrease of Rs. 26,64,000 under Education, of which about Rs. 3,00,000 represent a real improvement in receipts, and the

balance, Rs. 23,64,000, is more than counterbalanced by grants to the District Boards concerned.

Against the large increase under Irrigation, Police and Marine, the Government of Bengal received grants-in-aid of Rs. 5,40,000, Rs. 3,23,000 and Rs. 1,91,000 respectively from Imperial Revenues, while a sum of Rs. 1,89,000 was spent on Famine relief without any assignment. The net result of the three years was an improvement of Rs. 16,77,000 over the contract assignment, and the balance at the disposal of the Provincial Government rose from Rs. 20,00,000 on 1st April 1888 to Rs. 36,77,000 on the 31st March 1890.

63. The accounts of the last two years have been unduly swollen by the inclusion of the transactions of the Bengal and North-Western Railway from 1st July 1890, and the provision for the payment of its net receipts to the Directors of that railway. The net gain to the Provincial Government from Railways in these two years amounted to Rs. 48,26,000—Rs. 9,39,000 – Rs. 38,87,000, over the contract assignment; and of Rs. 16,06,000 in revenue heads. But the excess expenditure on Civil heads amounted to Rs. 15,41,000; on Irrigation Works Rs. 16,33,000; on Civil Works Rs. 20,48,000; and Miscellaneous Rs. 36,000. The grants to local funds amounted to Rs. 14,43,000 in excess of the assignment provided for in the contract between Imperial and Provincial, and the net result of the two years' transactions is a reduction of the Provincial balance by Rs. 11,61,000. The net improvement in five years amounts to Rs 5,16,000.

ORDER.—Ordered that a copy of this Resolution be submitted to the Government of India, Department of Finance and Commerce, for information.

Ordered also that a copy of the above Resolution be forwarded to the Board of Revenue; to all Commissioners of Divisions; to the Accountant-General; to the Inspectors-General of Civil Hospitals, Police, Jails, and Registration; to the Directors of Public Instruction and Land Records and Agriculture; to the Conservator of Forests; to the Port Officer, Calcutta; to the Superintendents of Royal Botanic Garden, Calcutta, and Government Printing, Bengal, and to all Departments of this Government, for information.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Offg. Secy. to the Govt. of Bengal.

DISTRICT ROAD FUND.

No. 3006R.C.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

Road Cess.

Dated Calcutta, the 20th October 1891.

RESOLUTION.

READ—

Letter from the Accountant-General, Bengal, No. 580L F., dated the 28th September 1891 submitting an abstract of receipts and expenditure of the several District Road Committees in Bengal for the quarter ending 30th June 1891.

RESOLUTION.—The Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees in Bengal for the first quarter of the year 1891-92 be published in the *Calcutta Gazette* and circulated to the officers concerned.

ORDER.—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette.*

Ordered also that a copy of this Resolution, and of the abstract referred to, be forwarded to the Commissioners of the Rajshahye, Bhagulpore, Chittagong, and Chota Nagpore Divisions; to the Superintending Engineers of the Eastern and Western Circles; and to the Financial Department of this Government for information.

By order of the Lieutenant-Governor of Bengal,

F. J. JOHNSTONE,

Joint-Secretary to the Govt. of Bengal.

O. T. BARROW,

Accountant-General, Bengal.

EXHIBITITION OF METAL WARE AND POTTERY TO BE HELD AT THE OPENING OF THE IMPERIAL INSTITUTE IN LONDON.

REVENUE DEPARTMENT.

RESOLUTION No. 3:6Mis. (F.)

Darjeeling, the 22nd October 1891.

READ—

A circular letter No. 21—23M & E., dated 26th September 1891, from the Secretary to the Government of India, Revenue and Agricultural Department, with enclosures, on the subject of an exhibition of metal work and pottery to be held at the opening of the Imperial Institute in the summer of 1892.

IT is proposed by the Governing Body of the Imperial Institute, Exhibition Road, London, to hold a special exhibition of metal work and pottery at the official opening of that Institute by Her Majesty the Queen-Empress in the summer of 1892.

The Secretary to the Imperial Institute has drawn up the annexed memorandum* relating to this subject, and Her Majesty's Secretary of State for India has been requested by the President and Council of the Institute to make the contents of that memorandum known to the Local Governments and Administrations, and Political Agencies in India, with a view of obtaining from the several Indian provinces contributions to the proposed exhibition. It is suggested that any contributions suitable for permanent display in the collections which are to illustrate the industrial resources of India, received through the Local Governments and Administrations should be assigned to the permanent collections to be represented at the Imperial Institute; and it is expressly stated that the specimens should be useful rather than ornamental, and should be small in size; any consignments of Indian metal work and pottery that are contributed should be restricted to purely commercial exhibits. The Government of India have forwarded a copy of the correspondence on the subject to this Government for such action as may be considered desirable.

* Dated 13th July 1891.

2. The Lieutenant-Governor desires to co-operate, as far as it lies in his power to do so, with a view to securing suitable contributions from Bengal to the proposed exhibition. This Government will bear the cost of carriage to Calcutta of any articles that may be sent from any part of this Province, and of their freight from Calcutta to England. For the exhibits themselves, Sir Charles Elliott will look to the public spirit of local bodies and to the liberality of private persons. Any local bodies or private persons who may be willing to contribute specimens are requested to communicate with the Under Secretary to the Government of Bengal in the Revenue Department, informing him of the number, nature, and size of what they propose to send. If he decides that the articles referred to come within the scope of the exhibition, he will ask the parties concerned to forward them to Mr. Troilokhya Nath Mukharji, Assistant Curator, Economic and Art section of the Indian Museum, Calcutta, who will be supplied with funds to pay for their carriage, and will arrange for their despatch to England.

ORDER.—Ordered that the foregoing Resolution be published in the *Calcutta Gazette* for general information.

Ordered also that a copy be forwarded to Mr. Troilokya Nath Mukharji, for information and guidance.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

MEMORANDUM.

IT is proposed to hold, upon the occasion of the opening of the Imperial Institute, an exhibition of metal-work (including jewellery) and of pottery and porcelain.

Such of the articles exhibited as are suitable for permanent display in the collections which are to illustrate the industrial resources of the Empire might be retained in the Institute: the remainder might be returned or sold, and contributors to the Exhibition would be invited to regard the permanent exhibits as loans, which could be replaced from time to time as fashion or improved production might require.

As space is limited, the exhibits should not include objects of large size.

Rare specimens of very special artwork would not be suitable for retention as permanent exhibits, which should include only such articles as are likely to be in demand by the "Trade."

Metal-work is understood to include the application of metals to the enrichment of fabrics, leather, &c., in such proportions as materially enhance the value and change the character of the objects.

Pottery includes porcelain.

The materials used in the different manufactures illustrated might be included ; also small models showing the various processes employed.

The following is a rough list of exhibits which might be furnished from North India (chiefly Native States) ; it includes an indication of the nature of such representations of the mineral resources of North India as are connected with metal-work, and should be contributed to the permanent collections.

Rajputana.—Metals and ores found in the State.

Jeypore.—(1) Enamel in gold, silver, and copper.
(2) Ornamental brass work, salvers, vases, boxes, shields, &c., "eurepousse" and engraved, chased or perforated.
(3) Damascening in gold and silver on steel of vessels, arms and armour.
(4) Arms and armour suitable for trophies and decorative purposes.
(5) Ornaments in base metal, with models showing native methods of casting them.
(6) Brocades.
(7) Gold and silver lace and wire with spangles.
(8) Models showing the native methods of preparing lace wire, &c., and of making salvers and vessels.
(9) Ores found in the State.

Jodhpore.—(1) Chaguls or water-bottles with silver mouthpieces from Kuchawan.
(2) Ores of copper, iron, &c.

Odeypore.—(1) White metal-ware from Blulwara.
(2) Elephant goads from Odeypore.
(3) Ores of zinc, ochres, &c.

Ajmere.—(1) Ores of lead, &c.

Sirohi.—(1) True Damascening in gold, of swords, daggers and sword-sticks.

Tonk.—(In Rajputana and Central India.)
(1) Parcel gilt salvers and plate.
(2) Pottery.

Jeypore.—(1) Semi-transparent pottery, blue and white, vessels, tiles, plates, &c.
(2) Plain white pottery.

Ulwar.—Brown ware.

Indargarh (through Boondi).—Lacquered pottery. Specimens of materials from all parts.

It would be desirable that exact copies of all exhibits which are likely to form portion of the permanent collection should be kept in the local museum or store, the originals and duplicates having corresponding numbers, so as to facilitate the revision of the collections from time to time.

F. A. ABEL,
Secretary, Imperial Institute.

The 13th July, 1891.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 24th October 1891.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
		Western Districts.		
Burdwan Divn.	1	Burdwan Oct. 24, '91	Nil	Weather—cool in the morning and hot in the day. Winter rice crop is suff[ering] very much for want of rain. Sowing of *rabi* crops commenced. Fod[der] and water sufficient. Prices of common rice:— Srs. Burdwan ... ... 16; Culna ... ... 14; Cutwa ... ... 15$\frac{11}{16}$; Raneegunge ... ... 16 } per rupee.
		Culna ...	Nil	
		Cutwa ...	Nil	
		Raneegunge ...	Nil	
	2	Bankoora .. 24 '91	Nil	Weather—seasonable. *Aman* suffering badly for want of rain both in Sud[der] and Bishenpur subdivisions. Sowing of *rabi* commenced in places. Fo[dder] and water plentiful. No cattle-disease. Rice selling at 18 seers per ru[pee] at Sudder and 17½ seers at Bishnupur.
	3	Birbhum .. 24. '91	Nil	Weather—bright and dry but cool. Sugarcane sufferin[g] for want of rain, [the] rice on high lands also suffering a great deal. The rest of the rice cro[p] in good order and will be very good if rain falls; at any rate the low l[and] yield may be expected to be fair, for Birbhum is most exceptionally [well] provided with irrigation tanks which are all well filled now with wa[ter]. Fodder and water plentiful. State of cattle normal. Prices of rice f[rom] 16 to 18 seers per rupee
		Rampore Haut ...	Nil	
	4	Midnapur „ 24, '91	Nil	Weather—fair and cool. *Aus* crop reaped. Much anxiety for *aman* crop [on] account of want of rain. Condition of cattle generally good. Price[s of] common rice:— Srs. Sudder ... ... 16; Contai ... ... 19; Tamluk ... ... (nearly) 13; Ghatal ... . 16 } per rupee.
	5	Hooghly . 24 '91	Nil	Weather—cooler at night, but still warm by day. Rain is much wanted, water is getting scarce. No cattle-disease reported. Prices of com[mon] rice:— Srs. Sudder ... ... 13; Serampore ... . 13; Jehanabad ... ... 14 } per rupee.
		Serampore ...	Nil	
		Jehanabad ...	Nil	
	6	Howrah „ 24, '91	Nil	Weather—fine *Aman* crop in want of rain in parts of Uluberia subdivi[sion]. Prospects of crops otherwise satisfactory. Condition of cattle good. Fo[dder] and water-supply adequate.
		Uluberia ...	Nil	
		Central Districts.		
Presidency Divn.	7	24-Perghs. Oct. 27, '91	Nil	Weather—bright; cool in mornings and evenings, days hot. Harvesti[ng of] *aus* and jute completed. *Aman* paddy has withered in places for war[nt of] rain. Rain badly wanted throughout the district. Sugarcane doing [well]. Fodder and water sufficient for cattle. Price of common rice varies 12 to 15 seers per rupee.
	8	Nuddea „ 24, '91	Nil	Weather—seasonable. Prospects of *aman* are not favourable owing to conti[nued] drought. Sowing of winter crops going on. It is retarded for war[nt of] rain. Health of cattle good, and supply of fodder and water sufficient.
		Kushtea ...	Nil	
		Meherpur ...	Nil	
		Chuadanga ...	0·31	
		Ranaghat ...	0·02	
	9	Khoolna „ 24. '91	Nil	Weather—fine and fairly cool. Rain is badly wanted, especially in the S[udder] and Satkhira subdivisions. Prospects of *aman* on low lands are good, b[ut on] high lands the crop is suffering from drought. Fodder and water for [cattle] sufficient.
		Bagirhat ...	0·34	
		Satkhira ...	Nil	
	10	Jessore .. 24, '91	Nil	Weather—days hot, mornings and evenings cool. *Aman* on low lands [doing] well, but rain wanted for high lands. Sowing of cold-weather crops [and] indigo commenced, but they also require rain. Condition of cattle [good]. Water and fodder plentiful.
		Jhenidah ..	Nil	
		Magura ...	Nil	
		Narail ...	Nil	
		Bongong ...	0·03	
	11	Murshedabad „ 26, 91	Nil	Weather—still hot during the day-time with frequent clouds. Winter ri[ce] greatly deteriorated except in low lands. In many places it is bein[g cut] for fodder. The ground is mostly too dry or hard for sowing *rabi*. *Kalai* doing well. Mulberry and sugarcane not bad. Rain urgently n[eeded] for winter rice not yet spoilt and for *rabi* cultivation. 18 head of [cattle] have died of small-pox in Kandi subdivision.
Rajshahye Divn.	12	Dinagepur „ 24, '91	Nil	Weather—seasonable and cloudy. Prospects of winter rice continue unfa[vour]able. Plants are reported to be withering for want of rain. *Rabi* cu[ltiva]tion in progress. Price of rice has risen at Sudder, rice selling at 12½ per rupee; at Thakurgaon price of rice unchanged. Condition of cattle everywhere except in Thakurgaon, where disease has broken out in villages. Supply of fodder and drinking water ample.
		Thakurgaon ...	Nil	
	13	Rajshahye „ 24, '91	Nil	No sign of rain, and none has fallen during this week. Cold weather comi[ng]. *Aman* is in a bad state, and irrigation from tanks is being resort[ed to] wherever practicable. Nowhere can a crop in excess of 8 annas be e[xpect]ed. Fodder and drinking water ample. No cattle-disease reported.
		Nattore ..	Nil	
		Nowgong ...	Nil	
	14	Rungpur „ 24, '91	Nil	Weather—fine with passing clouds. Prospect of winter rice fair, excep[t on] high lands where more rain is required. Steeping of jute nearly com[plete]. Lands are being prepared for cold-weather crops. Fodder plentiful. [Prices] stationary.
		Gaibanda ...	Nil	
		Nilphamari ...	Nil	
		Kurigram ...	Nil	

	No	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*					
		Central Districts—concld.			
Rajshahye Divn.—*concld.*	15	Bogra Sherpur Nowkhilia	Oct. 24, '91	Nil Nil Nil	Weather—cool with northerly breeze. Prospects of *aman* very unfavourable. The crop on high lands is withering. Rain is also much wanted for the low lands. Common rice selling at 13½ seers per rupee. Lands are being prepared for cold-weather crops. Sugarcane, *til* and *kalai* promise well.
	16	Pubna	„ 24, '91	Nil	Weather—days warm, nights cool. *Aman* on lands reached by the floods doing well, but on high lands it will materially suffer for want of rain. Sugarcane promises to be a bumper crop. Land is being rapidly prepared for *rabi* crops and tobacco. Rice selling at 13 seers per rupee. Plenty of fodder. No cattle-disease.
	17	Darjeeling	„ 24, '91	Nil	Weather—fair. *Marua* getting ripe. Potatoes are being gathered in most places. Sufficient fodder and water for cattle.
	18	Julpigoree	„ 24, '91	Nil	Weather—seasonable. *Haimanti* paddy generally backward. Tobacco being transplanted. Common rice sells at 11 seers per rupee, but is inclined to rise in rate. No cattle-disease. Fodder and water sufficient.
		Eastern Districts.			
Dacca Divn.	19	Dacca	Oct. 24, '91	Nil	Weather—seasonable. Prospect of *aman* good. *Asvini* paddy is being cut. Fodder available. Common rice selling at from 14 to 16 seers per rupee. No cattle-disease.
	20	Furreedpur	„ 24, '91	Nil	Weather—unusually hot in the day time. Prospect of *aman* paddy on low lands good, but the crop on high lands has withered. Sowing of *rabi* has commenced. Rice selling at 16, 16½, and 15 seers per rupee at Sudder, Goalundo, and Madaripore respectively. No cattle-disease. Fodder available.
	21	Backergunge	„ 24, '91	0·11	Weather—seasonable. State of standing crops not good in the eastern and southern parts wherever the soil is sandy. Rain is much wanted. Price of common rice varies from 12 to 18 seers per rupee. Supply of fodder and water sufficient.
	22	Mymensingh	„ 24, '91	0·19	Weather—days hot, nights cool. About 3 annas of winter rice damaged by want of rain. Common rice sells at 11½ seers per rupee. No cattle-disease. Supply of fodder and water sufficient.
Chittagong Divn.	23	Chittagong	„ 27, '91	0·24	Weather—fine and dry. Transplantation of *aman* crop over. More rain wanted. Prices steady.
	24	Noakhally	„ 24, '91	1·87	Weather—rainy on 21st; rest of the week warm and bright. Rain has done some good to *aman* rice, but more is much wanted. Lands are being prepared for *rabi* crops. Prices stationary. Condition of cattle and supply of fodder and water satisfactory.
	25	Tipperah	„ 24, '91	1·88	Weather—seasonable. Rain in parts of the district during the week. This has done good to standing crops. Fodder sufficient. No cattle-disease.
	26	Chittagong Hill Tracts.	„ 22, '91	1·17	Weather—mornings foggy; hot in the day. Rainy on 20th and 21st. Gathering of cotton has commenced. Harvesting of *jum* paddy in some places still continues. Lands are being ploughed for mustard and other winter crops. Sugarcane doing well. Common rice sells at 12 seers per rupee.
BEHAR.					
Patna Divn.	27	Patna Barh Hilsa Behar	„ 24 '91	Nil Nil Nil Nil	Weather—hot; cool at night. Paddy dying for want of rain. *Rabi* and poppy sowings progressing. Rain wanted for these crops too.
	28	Gya	„ 24, '91	Nil	Weather—mornings cool, days hot. Paddy on high lands withering. Sowing of *rabi* crops going on. Prices of food-grains almost stationary. Supply of fodder and water for cattle sufficient.
	29	Shahabad Buxar Sasseram	„ 24, '91	Nil Nil Nil	Weather—hot in the day, but cool with heavy dews at night. The absence of rain is seriously affecting the paddy in unprotected tracts. *Rabi* crops are germinating freely, and there is sufficient moisture in the ground to ensure a fair return. Damage from insects reported from Dehri.
	30	Durbhunga	„ 24 '91	Nil	Fair bright weather; getting slowly colder. Prospect of rice crop in Sudder and Modhubani subdivisions unfavourable. Total outturn will not exceed 6 annas of an average crop. More moisture wanted in places for *rabi* crops. Fodder plentiful, but water for cattle becoming scarce in a few tracts owing to irrigation. No tanks dry as yet.

No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR—concld.				
Patna Divn.—concld.				
31	Mozufferpur	Oct. 24, '91	Nil	Weather—days hot, nights cool. Prospects of paddy crop poor. Want of rain is being seriously felt almost everywhere. Artificial irrigation going on wherever it is possible. *Rabi* sowings in progress. Prices rising. Ample fodder and water for cattle. Their condition is reported to be good.
	Hajipur	...	Nil	
	Sitamarhi	...	Nil	
32	Sarun	„ 24, '91	Nil	Weather—seasonable. Except in Gopalgunge, rain much wanted to save the paddy crop and supply moisture for *rabi* sowings. Fodder and water for cattle sufficient.
33	Chumparun	„ 24, '91	Nil	Weather—seasonable. Prospects of *aghani* continue fairly good except in a few tracts. Sowing of *rabi* commenced in some places. Fodder and water for cattle sufficient. Prices stationary.
Bhagulpore Divn.				
34	Monghyr	„ 24 '91	Nil	Weather—nights getting cool, but days are hot with generally westerly winds. The continued want of rain has very seriously affected the winter rice crop, the outturn of which will under any circumstances be very poor. Ploughing for *rabi* sowings stopped for want of rain in Bukhtiarpur and Lukhiserai in the Sudder and also in the Jamui subdivision. Prospects are unfavourable. Prices are showing a tendency to rise. Supply of fodder and water sufficient at present. Health of cattle good.
	Beguserai	..	Nil	
	Jamui	..	Nil	
35	Bhagulpore	„ 24, '91	Nil	Dry weather. Days hot, nights cool. Rice suffering everywhere for want of rain. Rain also required for sowing *rabi* crops. State of things is already critical in Soopool and is becoming so in Mudehpoorah. Price of common rice 15 seers 2 chittacks per rupee.
36	Purneah	.. 24, '91	Nil	Weather—hot in the day, but cool in the morning and evening. *Aghani* is suffering everywhere in Sudder subdivision for want of rain, but in Arrareah it is doing well except on high lands. In Kishengunge also it is doing well, but more rain is still wanted there. Sowing of *rabi* crops going on briskly in Arrareah, where the *kurthi* crop is expected to be a good one. In Sudder and Kishengunge land is being prepared for *rabi* and also sown in places. Fodder and water plentiful. No cattle-disease.
	Kishengunge	...	Nil	
	Arrareah	...	Nil	
37	Maldah	„ 24, '91	Nil	Weather—days hot, mornings and evenings cool. Rain urgently required for winter rice, which is withering in some places. *Rabi* sowings progressing. Prospects of *kalai* crop favourable. Supply of fodder and drinking water sufficient. No cattle-disease. Rice selling at from 12 to 17 seers per rupee.
	Chanchal	...	Nil	
	Shibgunge	...	Nil	
	Gajole	...	Nil	
38	Sonthal Pergns	„ 24, '91	Nil	West winds and some clouds but no rain. Rather sultry weather. Rain wanted for high land rice, especially in Godda, Rajmehal, and Deoghur. If it does not rain, a 10-anna crop in north and a 12-anna crop in south may be expected. Fodder and water sufficient.
ORISSA.				
Orissa Divn.				
39	Cuttack	„ 24, '91	Nil	Weather—dry and cool. *Beali* harvested; outturn estimated at 11 annas in Jajpur, 12 annas in Kendrapara, and 14 annas in Sudder subdivision. Sowing of cold-weather crops in progress. One or two good showers of rain wanted for *sarad* crop.
40	Pooree	„ 22, '91	Nil	Weather—seasonable with passing clouds towards the end of the week. Reweeding of winter rice (*sarad*) going on. Rain urgently wanted for crops on high lands. Miscellaneous crops doing well. Common rice sells at from 18 to 24 seers per rupee. Cattle-disease reported from some parts of the district.
	Gope	...	Nil	
	Pipli	...	1·50	
	Khurda	...	4·26	
	Banpur	...	0·05	
41	Balasore	„ 24, '91	Nil	Weather—unseasonably dry. The long-continued drought is causing much anxiety in all parts of the district. Everything now depends on our getting rain within the next eight days.
CHOTA NAGPORE.				
South-West Frontier Agency.				
Chota Nagpore Divn.				
42	Hazaribagh	Oct. 24, '91	Nil	Weather—bright and cool. Prospects fair, but rain much wanted, especially for high lands. *Rabi* sowings continue.
	Giridih	..	Nil	
43	Lohardugga	.. 24, '91	Nil	Weather—clear and a little cool. Harvesting of *gora* rice nearly finished. Rain badly wanted for winter rice. Ample fodder for cattle.
	Palamow (up to 19th)	...	Nil	
44	Singbhoom	„ 24, '91	Nil	Weather—cool and bright. Prospects very satisfactory everywhere. *Gora* and *bera* paddy being harvested with full outturn.
45	Manbhoom	„ 24, '91	Nil	Weather—seasonable. Prospects of crops still continue good. Rice selling at from 16 to 20 seers per rupee.
	Govindpore	...	Nil

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past stations in the district sending its returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 24th of October 1891.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. RAINFALL. Of week. Mean for district.	Of week. Normal mean.	Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 16th October 1891. Mean for district.	Since 16th October 1891. Normal mean.	Since 16th October 1891. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

ten years. The variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater.
denoting cloud amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the normal means ten years. The means of the district are the numerical average of the rainfall return received in the district, *i.e.*, from total rainfall at the subdivisional

Statement of Rainfall in Bengal for the week ending Saturday (8 a.m.), the 24th of October 1891.

Meteorological division.	District.	Station.	Rainfall. Sunday, 18th Oct.	Monday, 19th Oct.	Tuesday, 20th Oct.	Wednesday, 21st Oct.	Thursday, 22nd Oct.	Friday, 23rd Oct.	Saturday, 24th Oct.	Total— Number of rainy days.	Rainfall of week.	Average normal rainfall of week.	Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 16th Oct. 1891.	Average rainfall from 16th Oct. to date.

Explanation.—......indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. I[illegible] the return are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a [illegible] as when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 27th October* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING SATURDAY, THE 24TH OF OCTOBER 1891.

SETTLED weather has prevailed throughout the week in the northern districts and in Lower Bengal, except on two days in the latter half of the week when, owing to the depression in the south-west of the Bay, cloudy and in parts showery weather obtained. At the beginning of the week pressure was about ·05 inch below the normal in the south of the Bay and as much above in the west of Behar, so that gradients were steeper than is usual at this season. Consequently northerly breezes were blowing at all stations, and dry air with comparatively low temperature prevailed. The low-pressure area in the south of the Bay gradually deepened and concentrated off the Madras coast, where it remained stationary almost till the end of the week, and the slow fall of pressure which had been going on in Bengal during the previous week continued till readings were about a twentieth of an inch below the normal; but as the fall was very uniform over the Bay and Bengal, the distribution underwent very little relative change. Almost general rain fell at the Madras stations day after day, and the influence of the depression on the general weather conditions gradually advanced northwards, becoming apparent in Orissa and Lower Bengal, on Wednesday the 21st, in cloudy skies and local showers, especially in East Bengal On the 22nd light cloud continued, and showers again fell in East Bengal and part of South-West Bengal, but after that there was clear sky and rainfall ceased.

The rainfall in East Bengal may have been partly due to local causes, as pressure fell there much more rapidly on the 23rd than in other districts, and squally weather with very heavy rain was reported from Akyab, but with the rise of pressure in the south of the Bay after the depression passed inland, conditions became settled over the whole province. No rain fell in Chutia Nagpur and Behar, and practically none in the other districts except East Bengal.

Pressure on an average for the week has been normal in the northern districts and about ·02 inch below in South-West Bengal. At the beginning of the week there was excess of about ·05 inch in the west of Behar diminishing to ·02 inches at the head of the Bay. The general tendency has been downwards, but changes have been very small except on the 22nd, when there was a brisk fall at some of the eastern stations, followed by a moderate rise. The depression in the south of the Bay was shallow throughout, and the greatest defect was about ·15 inch at Negapatam. The means for the week being normal is due to the small excess at the beginning counterbalancing the small defect at the end.

Temperature has at times changed irregularly, but it has generally fallen, and the defect of about 2° which prevailed at the beginning of the week has been maintained except in Behar and part of Chutia Nagpur, where there was a rather rapid rise during the last day or two, resulting in excess of between 1° and 2°. Means for the week are below the normal in all districts except South Behar, where there is a slight excess. Defect is 1° in Chutia Nagpur and North Behar, 1·2° in East Bengal, 1·4° in South-West Bengal and Assam, 1·5° in North Bengal, and 2° in Orissa.

Rainfall was almost general in the following districts on the 21st and 22nd:—Chittagong, Chittagong Hill Tracts, Backergunge, and Noakhally; scattered in Furreedpore, Tipperah, Mymensingh, Nuddea, and Khoolna; and very scattered in Orissa and other districts of South-West Bengal No rain fell in Behar and Chutia Nagpur, and only one shower was reported in North Bengal The mean fall is very nearly half an inch in East Bengal, ·08 inch in Orissa, and ·03 inch in South-West Bengal.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 24th of October 1891:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE. Highest observed during week.	Lowest observed during week.	Averages for week. Of highest of each day.	Of lowest of each day.	Of mean for each day. The average fall of the corresponding period for 24 years, S.-G.'s Office ...	63·28

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

⏏, dew; o, overcast; d, drizzling rain; t, thunder.

RESOLUTION ON THE REPORT OF PUBLIC INSTRUCTION IN BENGAL FOR THE YEAR 1890-91.

GENERAL DEPARTMENT—EDUCATION.

No. 507.

Calcutta, the 26th October, 1891.

RESOLUTION.

READ—

The Report on Public Instruction in Bengal for the year 1890-91.

Preliminary.

The Annual Report for 1890-91 has been submitted by Sir Alfred Croft, K.C.I.E., who was in charge of the Department of Public Instruction throughout the year. It has unavoidably been laid before Government a few days after the prescribed date, and the Lieutenant-Governor trusts that next year due punctuality will be observed. According to the standing rule that full details need only be printed in alternate years, the present report might have been considerably curtailed, but the Director has rightly anticipated His Honour's wishes in treating certain portions of it at full length.

Number under instruction.

2. A comparison of the statistics shows that public institutions have increased by 145, and their pupils have diminished by 15,434; private institutions were fewer by 480, and their pupils less by 7,546: total loss 335 institutions and 22,980 pupils. The fluctuations in the numbers attending higher education are of an ordinary

character, and their general tendency is to increase. The decrease in the number of lower primary schools has been continuous during the last four years, as the following figures show:—

	Number of schools.	Number of pupils.
1887-88	45,596	991,110
1888-89	44,854	982,126
1889-90	44,146	960,914
1890-91	43,998	942,244

The figures of 1890-91 are significant and cannot be explained, as last year, by the reappearance of primaries in the list of Koran schools. The net loss of pupils in lower primary schools is over 18,000, whereas the Koran schools are fewer by 195 and their pupils by 4,775. In private institutions also another main reduction is perceptible in Arabic or Persian schools from 1,904 to 1,146. Again, in classifying the figures of the last two years according to the numbers in the several stages of education, the main results are that higher education has progressed, that there has been a general advance of pupils from the upper primary to the middle, and from the middle to the higher stage, while the loss of pupils has been for the most part confined to the lower primary stage. During the decade, 1881 to 1891, education has advanced to the extent of a gain of 18,413 schools and of 540,454 pupils; in other words, the schools have increased by 39 per cent. and the pupils by 58 per cent. The Census of last spring affords an opportunity for further comparisons. In 10 years the population and the number of male and female children of school-going age have increased by between 6 and 7 per cent. During the same period the number of boys at school has advanced by 54 per cent., and of girls under instruction by 166 per cent.

Financial results.

3. In the Resolution on the Director's report for 1889-90, allusion was made to the procedure under which the Accountant-General each year reduces the departmental budget by a large amount on account of probable savings, so that the eventual result can hardly show any further savings. This year also the sum of Rs. 1,73,000 was deducted on this account, so that the actuals have exceeded the reduced estimates by nearly Rs 62,000. After adjusting a charge of Rs. 11,700 on account of the Civil Engineering College, and an excess of Rs. 6,550 in the receipts over the estimates, the net deficit falls to Rs. 43,415. The Accountant-General will doubtless take note of what is said in paragraph 8 of the report, and endeavour to make a more correct approximation in calculating the "probable savings" on the estimates. The total expenditure on education in Bengal, including all disbursements from public and private sources, such as the fees and contributions paid to the University and in all public schools, amounted to Rs. 85,74,000—a decrease of Rs. 1,69,000 as compared with the preceding year. The expenditure from public sources rose from Rs. 32,37,000 to Rs. 32,67,000, the increase being almost entirely from Provincial revenues; the private contributions fell from Rs. 55,06,000 to Rs. 53,07,000; the greater part of this decrease was in the fee-receipts of the schools. The whole difference of two lakhs represents a merely nominal decline, as both the fee-receipts and the other sources of income were erroneously excluded from the returns of the year in unaided high English schools for Europeans. Collegiate, secondary, primary, special education, all cost less than in the preceding year, but Rs. 63,000 more were spent on female education. Municipal funds contributed Rs. 9,000 less than last year, and the same uncertainty that has before been noticed continues to attach to their figures. The Lieutenant-Governor would be glad to hear that the difficulty of obtaining authentic figures from the municipalities had been surmounted.

Controlling agencies.

4. The Director visited several districts and colleges during the year, and separate orders have recently been issued with respect to the amount of inspection duty he will be expected to perform personally in future. The Assistant Inspectors were all engaged on touring for long periods, and an explanation has been furnished to show why some of them showed less work of this kind than might have been expected. The amount of work performed by the Inspectress of Female Schools in touring, and the number of schools visited, should be stated in future. The Lieutenant-Governor has noticed the Director's remarks

on the want of an Assistant Inspector in the Dacca Division, and will await a re detailed exposition of the difficulties which have arisen in connection with the insufficiency of inspection in the Chittagong Division. It is certainly inadequate for the Inspector to spend only four days in Noakholly and five days in Chittagong respectively. The periods spent on tour by the Deputy Inspectors vary from an average of 148 days in Chittagong to 186 days in Chota Nagpore; this range of variation is much smaller than in the previous year, but the fact still remains that in nine districts the prescribed minimum of 150 days spent on tour was not attained. His Honour is satisfied that the Census operations, in which the officers of the Education Department were largely and very properly employed, interfered to some extent with their ordinary duties, and it is a matter for congratulation that the work of inspection could be conducted with so little detriment on this score. The question of providing the Deputy Inspectors with clerical assistance on a moderate scale has recently been resubmitted by the Director, and is under the consideration of Government. The Sub-Inspectors are required to spend a minimum of 200 days in the interior of the country, and to visit 400 schools a year. The statement furnished does not indicate the individual officers who failed to conform with the standing orders; but the average of time spent on tour fell short in four divisions by various amounts, and only in the Burdwan Division the proper number of schools was visited. The Census work must also be taken as sufficient explanation for any shortcomings this year on the part of Sub-Inspectors. The 940 chief gurus and inspecting pundits paid 270,388 visits to schools. These figures should represent a considerable amount of inspection, and the Lieutenant Governor fully approves of the plan of substituting inspecting pundits for chief gurus, so that the latter may not neglect their own pathsalas. The pundits are the more costly agency, doubtless, but by their better education they ought to improve the standard of the primary schools. Mr. Bellett has properly brought to the notice of Government his view that supervision is greatly neglected by Sub-Inspectors, and His Honour trusts that the responsibilities of these officers for watching the work of the inspecting pundits will be fully maintained.

District Boards.

5. The Director has rightly recorded the fact that the District Boards constituted under the Local Self-Government Act of 1885 now form a part of the regular governing machinery of the country in respect of education. For some time it was likely that difficulties would arise in consequence of the reluctance of the departmental officers to adopt a new system, and on the other hand, of the novelty of the duties imposed on the members of the Boards. As might have been expected, the experience of five years' working has produced good results. The relations between the Boards and the departmental officers are pronounced to be eminently satisfactory with hardly any exceptions. The differences between these authorities in the Burdwan and Orissa Divisions, mentioned in last year's report, have been composed. It is also gratifying that these improvements can be traced to distinct causes, such as the appointment of the Deputy Inspector as an *ex-officio* member of the District Board in every district but one; and secondly, the issue of revised rules under the Local Self-Government Act. The rules were framed with great care, have been found to be nearly complete, and are rarely broken. Sir Alfred Croft has again mentioned a few instances in which there have been differences of opinion, more or less pronounced, between District Boards and the departmental officers. The instances have been few, and the Lieutenant-Governor has no wish to hamper the former by unreasonable restrictions where they are within their rights, though he thinks they would ordinarily do well to follow the advice of experts. It is observed that the Deputy Inspector is not a member of the Gya District Board, and this exception should not be allowed to continue. It is sometimes the practice for the educational work to be disposed of by the District Board, in the person of its Chairman, in direct communication with the Educational Committee in the single person of the Deputy Inspector, whereas the Government has frequently inculcated the necessity of District Boards being fully consulted, in all matters of principle and importance, through their Educational Committees. It is to be regretted, therefore, that at least one District Officer appears to have adopted a policy inconsistent with the orders of Government,

by making over the entire educational work of the Board to the Deputy Inspector under his own supervision as Chairman. He will be directed to subordinate his own views to the authorized policy. A special report will also be called for on the state of education in the Puri district, which appears from the Magistrate's account to be unsatisfactory. The Lieutenant-Governor desires it to be understood that he will look to the District Boards through their Educational Committees and the Deputy Inspectors, to carry out all the duties assigned to them under the orders of Government. The Local Boards which have been appointed for educational work in many districts appear to have made a commencement, but their success is evidently so limited hitherto that they cannot be considered to have emerged from the experimental stage.

University Education.

6. There has been no change of any importance in the number of collegiate institutions, though this year returns have been received from only 34 instead of from 36 colleges. Of these 11 are Government, 8 aided and 15 unaided. There has thus been a temporary check in the development of private enterprise in this direction, but the increasing demand for higher education is testified to by the number of collegiate students, viz., 5,232, the highest figure yet attained. This result is a consequence of the large proportion of successful candidates at the Entrance Examination of 1890. Of the increase of 350 students during the year, 173 are in the Government colleges; there are 267 students more in the aided colleges, but the unaided institutions have fallen off by 90 during the year under report. Nearly half the colleges are in Calcutta, and they have attracted nearly two-thirds of the whole number of students. The numbers of the successful candidates at the University Examinations during the last four years have varied as follows :—

	1888.	1889.	1890.	1891.
First Arts	481	629	996	693
Bachelors of Arts	323	366	399	231
Masters of Arts	43	58	62	57

The proportion of First Arts students successful is almost identical with last year, but the decrease in the number is due to fewer candidates having passed the Entrance Examination in 1889 compared with 1888. The Government colleges fully maintained a marked superiority in passing candidates, not only in total numbers, but also in places in the higher division and in scholarships. The successful Bachelors of Arts fell from 40 per cent. of the candidates in 1890 to below 29 per cent. in 1891. These great variations in the ratio of success are very unsatisfactory. If due to the inferiority of the candidates it is inevitable; if to changes in the teaching staff it is avoidable, and should be avoided. The Lieutenant Governor looks to the Director to see that the interests of the Professors are not considered before the interests of the students. If these variations are due to a difference in the standard and to changes in the examination, this swing of the pendulum is discouraging and injurious to the spread of education. Efforts should be made to secure uniformity of standard, and this can only be attained by continuity in the examining body. It is to be regretted that there were many changes in the staff of the Ravenshaw College; but the Lieutenant-Governor is confident that, unless necessitated by considerations of health or other urgent causes, such changes should be made as rarely as possible. The number of Muhammadan candidates successful at the University Examinations for the last three years is shown as follows :—

	1888.	1889.	1890.	1891.
First Arts	19	21	57	16
Bachelors of Arts ..	12	18	21	12
Masters of Arts	1	1	3	2

These results show that the progress recently made has not been maintained, especially in the First Arts Examination. The total expenditure upon collegiate education has decreased during the year from Rs. 6,91,079 to Rs. 6,62,377, or, after certain adjustments, by Rs. 19,000. The charge on Provincial revenues is 40·7 per cent. of this total. In the Government colleges the total cost has also fallen from Rs. 4,09,955 to Rs. 4,00,726, and the cost to

Provincial revenues from Rs. 2,52,465 to Rs. 2,43,757. The annual cost of each student in a Government college decreased from Rs. 244 to Rs. 232, and the cost of his education to Government from Rs. 150 to Rs. 141. Various causes, such as the increased free-receipts and the gradual substitution of cheaper agency, have conduced to these results. The diminished cost of the Presidency College in five years from Rs. 91,304 to Rs. 79,836, simultaneous with increased efficiency, is very satisfactory. The following figures, which refer to the whole number of the collegiate students, are worth recording:—

	1888.	1889.	1890.	1891.
	Rs.	Rs.	Rs.	Rs.
Average cost of each student in a College in Bengal ...	143	124	138	129
The Government share thereof	63	50	55	52

7. Sir A. Croft has made an interesting comparison between the candidates for the A course in Literature and those for the B course in Science. There has been a steady decline of late years in the number of candidates taking up Science, both in aided and unaided institutions; so that, with hardly an exception, it may be said that Science is no longer taught in unaided colleges. On the other hand, the results of the examinations for the last four years have been steadily in favour of the B course candidates. As the Science candidates have succeeded better than those of the A course in the subject of English, in which they are examined in common, the Director is disposed to infer, not that the B course was the easier, but rather that it was chosen by the best candidates. The Director's views on this question are valuable and his criticisim is thorough. But some of the numerical results exhibited in his report differ strangely. It may perhaps be suggested that the B course is the more expensive to teach and requires costly apparatus, so that the result turns very much on the means available for instruction: where they are complete, as at the Presidency College, the mind is well developed and the students do better, even in English; where they are incomplete, as at Dacca and Hooghly, the training is more superficial. If the Director's view as to the mental superiority of those who take up the B course is correct, it is very encouraging, as a training in Science has long been recognized as the great desideratum for the Indian mind, which has shown a greater inclination for literary and philosophic pursuits than for observation and the study of facts. Another reason is alleged for the unpopularity of this course, in the greater ease with which those who have passed in English and mathematics gain posts under Government, and teaching appointments in schools. This is a true and apposite remark. It is to be hoped, however, that a better time is coming for Physical Science and for the diversity of occupations which must follow from the development of factories, mines, and other industrial occupations in the country.

The B or Science course.

8. The number of secondary schools for native boys has risen during the year from 2,366 to 2,393, but the number of pupils has fallen from 201,452 to 199,105. The floods in the Presidency Division affected the middle schools, to which the loss is confined to the extent of 2,000 pupils. The expenditure on secondary instruction has varied in the last three years as follows:—

Secondary education.

	No. of schools.	Public funds.	Private funds.	Total.
		Rs.	Rs.	Rs.
1888-89 ...	2,319	6,01,539	19,34,506	25,36,045
1889-90 ...	2,366	6,08,294	20,11,672	26,19,963
1890-91 ...	2,393	6,11,046	20,62,859	26,73,905

The increase from private funds is about eighteen times as great as that from public funds. It is a good sign that the municipal contributions to secondary education do not increase, as until adequate provision is made for primary, it is no part of the duty of municipalities to contribute large sums to secondary, education. The Lieutenant-Governor will have an inquiry made in the Municipal Department to see whether the figures received therein agree with those of the Education Department. The number of High English Schools has

risen from 343 to 351. Of these nearly 300 are under private management, and their general efficiency affords a proof that the gradual withdrawal of Government from the control of its zillah schools can be effected without appreciable injury to education. Since the year came to an end, the Hindu School at Calcutta has been allowed to remain in existence (although its closure had been decided upon) in deference to representations, and on the condition of paying its way. At the University Entrance Examination 1,710 boys passed as compared with 2,156 in 1890, the percentage of success being 42 instead of 50. Great care is said to be taken to make the tests applied in this examination as constant in quality as possible, so that the fluctuations may chiefly depend on the varying capacities of the candidates. In the Lieutenant-Governor's opinion the real remedy to ensure accuracy of results would be to maintain a continuous body of examiners, which is the best method of securing a uniform standard, and nothing should be done to affect the independence of this body. It would be a source of regret if anything were done to override that independence by the pressure of public opinion either within or without the University aiming at a reduction of the general standard. In future reports it is desirable that there should be on record some information as to places where Government zilla schools exist alongside unaided schools, and where they should either give way to those schools or else should justify their existence. In the Middle English and Middle Vernacular Scholarship Examinations the percentages of successful candidates rose considerably, but the Lieutenant Governor is not disposed to regard these fluctuations as satisfactory unless the tendency is continuously in an upward direction. The system of high schools on a vernacular basis is favourably reported on, and Sir Charles Elliott thoroughly shares the view that the acquisition of a rudimentary knowledge of the principal subjects of study through the mother-tongue has considerable advantages.

Discipline and moral training.

9. The measures that have been adopted of late to give effect to the views of the Government of India in regard to discipline in schools and colleges appear to be bearing fruit. All the higher inspecting officers are decidedly of opinion that improvement has been effected. Conduct registers have been introduced, boarding-houses are becoming more numerous and popular, books of questionable morality are being carefully excluded from the course of study, and breaches of discipline that come to notice are promptly and effectively punished. This progress has been attained by the efforts of the department and the co-operation of the University and school managers. The rules which have been framed for all classes of schools to regulate the transfers of boys from one school to another have had a large share in enforcing discipline. The boy is no longer master of the situation, and cannot now change his school without paying his fees, or without his guardians' knowledge, or when chastised for misconduct, or not promoted to a higher class. It has, indeed, become necessary to watch that the rules are not used oppressively. The Lieutenant-Governor is aware that the evils of insubordination and laxity of discipline were chiefly conspicuous in the large towns, and he hears with pleasure that they have lately diminished. But he is not prepared to accept implicitly the optimistic view in which the officers of the department indulge to the effect that these shortcomings are confined to schools under private management. During the past year facts have been brought to his knowledge, of which he was constrained to take immediate and serious notice. He has heard bad accounts of the state of discipline among the pupils in some Government schools, of the want of respect of the boys for their teachers, of their rudeness to gentlemen, and especially to ladies, out of doors; and he is quite prepared, if a bad case of this kind is proved and warnings are neglected, to close any school or college where such a punishment is required. He fully concurs with the Director that instances of misconduct on the part of schoolmasters should be vigorously dealt with, and that any organised riot, such as occurred in one of the training schools, should meet with condign punishment. It is to be hoped that the labours of the Central Text-book Committee, who selected a number of text-books from the authorised list as having a definite moral tendency, will conduce to the desired results. It may be expected, too, that the home influence and associations of the students will be improved as the parents and guardians become better aware of the importance attached

by Government and the Department to matters of discipline and good conduct.

Physical training.

With regard to physical training, the Lieutenant Governor has not much to add to what has already been declared to be the policy of Government, that all manly games should be encouraged, and that a reasonable amount of financial assistance will be afforded to provide gymnastic appliances and in aid of athletic clubs. The Director has rightly observed that on the whole a fairly sufficient response has been made to the invitation held out by the Government. Some of the professors and masters have shown a laudable activity in promoting and sharing in school games, and their example should be followed by all who are not debarréd by physical inability from doing so. Sir Charles Elliott has noticed with pleasure Sir A. Croft's remark that the European residents of a station generally take keen interest in the games of the school-boys, and he hopes that the friendly intercourse thus commenced will develop into kindly relations between the different sections of the community.

Boarding-houses.

10. The Lieutenant-Governor has perused with interest the statistics of the cost of living in boarding-houses, sometimes called hostels, attached to educational institutions. The facts have been gathered from 26 places outside Calcutta, in which 822 resident students were accommodated. The average cost for each student was almost exactly Rs. 4 a month, of which he contributed the price of his food, Rs. 2-11-6; the remainder, on account of servant, rent and sundries was supplied from Government and other sources. This charge for food cannot be considered excessive, but at most places where the Lieutenant-Governor has made enquiries as to the payment required from a student at a boarding-house, he has found it to be not less than Rs. 4 per mensem, except at Muhammadan institutions. Even at a remote place like Nya Doomka in the Sonthal Pergunnahs the charge was said to be Rs. 4, which seems too large. The families of many ryots and small landholders often live on Rs. 5 or Rs. 6 a month: and though there may not be many boys from this stratum of society in our zillah schools, it is very desirable that they should not be excluded from the boarding houses by inability to pay a sum which bears so large a proportion to the family income. A severe standard of thrift and ascetic living should be offered by boarding houses in Bengal, and Sir Charles Elliott trusts that efforts will be made to reduce the charges as much as possible.

Primary education.

11. The following figures represent the numerical fluctuation of primary education for boys during the last four years:—

	Upper Primary.		Lower Primary.	
	Number of schools.	Pupils.	Number of schools.	Pupils.
1887-88	3,026	112,323	45,595	991,092
1888-89	3,077	115,485	44,854	982,126
1889-90	3,337	124,568	44,145	960,865
1890-91	3,537	128,537	43,997	942,211

It is clear from these figures that there is a natural advance of the best lower primary to the upper primary stage, and the tendency is in the direction of extending patronage to the upper primary schools, while difficulty is experienced in keeping the number of lower primaries up to the mark. The total result is a net gain of 52 primary schools for boys, and a loss of 14,685 pupils. The losses are accounted for by the floods which affected three divisions, the consequent agricultural distress, and epidemics: but the Census may also with reason be held to have affected the collection of statistics about unaided schools, so that the loss may not have been really so heavy as it would appear to be on paper. The following statement shows by Divisions the administration and expenditure of the primary grant upon aided schools in 1890-91:—

Division.	Allotment.	Expenditure.	Schools.	Number of pupils.	Cost per school in rupees.	Cost per pupil in annas.
	Rs.	Rs.				
Presidency ...	88,533	88,499	4,031	113,641	21·9	12·4
Calcutta ...	10,000	9,962	206	9,395	48 3	16·9
Burdwan ...	1,23,110	1,17,305	8,762	221,088	13·5	8·6
Rajshahye ...	80,565	74,163	2,420	61,810	30·6	19·1
Dacca ...	1,04,082	92,360	5,576	129,459	16·6	11.5
Chittagong ...	76,385	68,326	4,763	104,015	14·3	10·5
Patna ...	1,08,714	96,592	5,450	119,246	17·7	12·1
Bhagulpore ...	77,485	72,218	2,313	55,359	31·2	20·8
Chota Nagpore ...	58,032	58,061	1,587	47,310	36 5	19·8
Orissa ...	60,161	57,973	5,297	81,832	10·9	11·3
Orissa Tributary Mehals	2,800	1,444	108	1,255	13·3	18·2
Total ...	7,89,897	7,36,906	40,512	944,410	18·2	12·4

The Lieutenant-Governor would like the last four columns in the larger table in paragraph 89 of the Director's report, from which this statement is abridged, sub-divided into headings "upper" and "lower" primary in future. The proportion of boys actually at school compared with the number of boys of school-going age varies from 68 per cent. at Hooghly to 10 and 7 per cent., respectively, in the districts of Mozufferpore and Durbhunga. In these two cases the figures are extraordinarily low, and indicate great backwardness in the popular desire for learning, and perhaps some lack of support to education on the part of the District Boards. Apart from the sums spent on primary schools from the grant-in-aid fund and the circle school grant, the total expenditure on primary education, controlled by the Department and by District Boards, amounted to Rs. 7,36,906, of which Rs 1,57,311 were from Provincial Revenues and Rs. 5,79,595 from District Funds. The question of the proportion of the primary grant spent on stipends allowed to stipendiary schools to the amount spent on rewards to non-stipendiaries is fully discussed by the Director. The Government policy, as has been repeatedly announced, is, broadly speaking, to replace stipends by payments-by-results. Hitherto, though the stipendiaries represent only about a fifth part of the primary schools, they have for some time past been receiving more than half the primary grant. In spite of the much larger sum spent on each stipendiary school, the fact remains that many non-stipendiary schools are as efficient as the stipendiaries. Thus 30,618 lower primary schools sent pupils to the examination, of which 27,239 were non-stipendiaries and 3,379 stipendiaries. Out of the 30,618, so many as 6,586 schools were successful. Even if all the 3,379 stipendiaries were successful (which is hardly probable), there must have been at least 3,207 non-stipendiary schools successful. To admit of the limited funds available for primary education being used as widely as possible to aid the large number of pathsalas that require some help, the measures to be adopted would be, either to cut down the rate of stipends, or to reduce the number of stipendiaries and extend the system of payment by-results, or to reduce the number of chief gurus and inspecting pundits, or to exclude from rewards the pathsalas that fail to earn a certain fixed minimum. In many instances the District Boards have increased the grant for rewards and reduced that for stipends. The Lieutenant-Governor completely concurs in the Director's views that a system of stipends gives greater stability to the schools and should be extended if funds were available. Sir Alfred Croft writes—

Except in the case of very backward tracts, where hardly any fee-receipts can be looked for, and where, therefore, a stipend is the teacher's chief means of subsistence, small stipends of one or two rupees a month are, it is believed, just as efficacious as larger ones for the purpose of securing the stability of a lower primary school. Such sums might for convenience be paid quarterly as a sort of retaining fee. Moreover—and this is the central point of the scheme—the small stipend should in every case be regarded as an advance out of the reward to be subsequently earned at the central examination, to which all such stipendiary schools should be admitted along with the rest. Thus a school would be entitled to receive only the amount by which the sum earned at the examination exceeded the Rs. 12, Rs. 18 or Rs. 24 already paid, or to be paid to it as a stipend. If any school earned less than the amount of its stipend, it should not be called upon to refund the difference; but its future retention on the list (possibly with an increased stipend, possibly with none) would be decided by the

District Board after consideration of the usefulness of the school and the backwardness of the locality. The total amount that a school could earn at the examination should also be limited to say Rs. 50 (inclusive of the stipend, if any), so that prosperous and well-attended institutions should not carry off an undue share of the primary grant, to the detriment of struggling schools. On the other hand, there is no advantage in frittering away the grant in small payments of Rs 2, Rs. 3, or Rs. 4 to schools that fail to earn any larger rewards at the examination. Such payments would hardly help the schools in any appreciable degree, while they might materially reduce the total sum available for rewarding schools of greater public utility. Something like Rs. 4 or Rs 5 might be fixed as the limit below which no reward would be paid to a school; and it is evident that the fixing of such a limit would supply a struggling school with a very tangible inducement to improve itself and increase its earning power.

Sir Charles Elliott is prepared to accept for the present the lines thus laid down, which may be summed up as recommending (1) the mixed system of stipends with rewards, (2) the fixation of a minimum and a low maximum of rewards, (3) the inclusion of the stipend in the reward ultimately adjudged. Before leaving this part of the subject, he will ask the Director to furnish a statement next year showing district by district the sums spent in stipends and in rewards, and the number of pupils passing the lower primary and standard examinations. The model budget circulated by Dr. Martin for a district with a primary allotment of Rs. 10,000 a year is a useful suggestion as to the division of the amount, but as to the amount itself, it would be well if the proportion that their expenditure on primary schools bears to the total expenditure of District Boards were taken, on an average of the whole province, as a guide to the figure which no District Board should fail to reach. Thus in 1890-91 the District Boards spent 55½ lakhs in all, excluding debt, of which 3½ lakhs, or 6·3 per cent., went to primary education. Sir Charles Elliott also agrees in the Director's recommendation that no school which teaches to the middle standard should receive any assistance from the primary grant except with the permission of the Circle Inspector; that such permission should be withheld unless he is satisfied that there was a sufficient staff to teach the lower and upper primary standards thoroughly, and unless pupils were regularly sent up for the corresponding examinations; and that the number of these schools, with the reasons for aiding them, should be reported annually to the Director. It is desirable that District Boards should adopt these principles. The Government is also prepared to leave it to the Inspectors to decide in what cases the middle schools which employ gurus might still, with regard to their financial condition and other considerations, be allowed to retain them. The Lieutenant-Governor observes that the mode of administering the educational grant in Calcutta is under enquiry—which it appears to need—and will await a report on the subject. He has also noticed the tabular statement designed to show the educational position of each district with respect to primary education. It would be more valuable, in his opinion, if the merit mark were to depend partly on the number of scholars and its ratio to the population of the district, and not only on the number of schools; and it would be an improvement if next year the results could be worked out more fully with reference to these observations. Important measures were adopted during the year to secure better results in the Lower Primary Scholarship Examinations. A small fee of two annas is required from each candidate for the examination, and the Government orders fixing the pass marks in the different subjects have been re-issued. To remove the possibility of the irregularities which have occurred in the reward examinations, it is necessary that the Sub-Inspector alone should be responsible for their conduct. Uniformity of examinations and responsibility for the results are essential. No District Board should make over the examination and assignment of awards based thereon to a voluntary committee assembled for the occasion, then dispersed, and differing as to its members from year to year. The method prescribed by Sir A. Croft in his paragraph 105 seems to be the only one which meets the case, and should be adopted. The general question raised by the Director in paragraph 102, as to the additional grant of about 10 lakhs of rupees if primary education is to receive its full expansion, is an important one and deserves the careful attention of Government. But, at the close of a Provincial Contract, and in the uncertainty that exists as to the revenue which will be left to the Local Government to dispose of when the new contract is made, it is impossible at present to say what can be done next year or until the results of the working of the contract develop themselves.

Special instruction.

12. The number of training schools for teachers, *i.e.* masters, mistresses and gurus, fell from 242 to 222, and the pupils from 1,993 to 1,958; and the cost was diminished by Rs. 11,662. The results of the vernacular mastership examination for pupils of first and second grade training schools and for private candidates show that out of 609 candidates 530 passed and were granted certificates. These men are appointed to masterships in middle and upper primary schools; and it is obviously desirable that all masters in those institutions should have passed through training schools and have received certificates of competency. The next report should show what progress has been made towards reaching this ideal; how many teachers there are in those schools, certificated and uncertificated, what is the average number of annual vacancies, and whether the number who pass out from the primary schools are equal to the number of vacancies. The "other schools of special instruction" include all institutions and departments of institutions teaching Law, Medicine, Engineering, the Calcutta School of Art, industrial schools and other schools of a special character. The statistics relating to their numbers and cost are reproduced in the following form:—

	Number of institutions.	Number of pupils on the rolls on 31st March 1891.	Average monthly roll number.	Expenditure. From public funds. From Provincial Revenues.	From District and Municipal Funds.	From private funds.	Total.	Average annual cost per pupil. Cost to public funds.	Total cost.

The variations in the numbers of the students in the several professions are of interest, as follows:—

Year.	Law.	Medicine.	Engineering.	Arts and Industry.	Other special schools.	Total.
1888-89 ...	935	999	518	651	172	3,275
1889-90 ...	912	1,046	622	795	611	3,986
1890-91 ...	1,025	1,184	703	753	550	4,215

Having regard to the crowded condition of the profession of Law, it is not satisfactory to see that the Bengali youths throng to it in greater numbers, but the increase of recruits for Medicine and Engineering is a matter for congratulation. The falling off in the numbers under education in schools of Arts and Industry is slight and probably accidental, for there is a perceptible movement in all parts of the Province in favour of the establishment of industrial schools. a movement which the Lieutenant-Governor desires heartily to encourage, as in his opinion, what the country most wants is a diversity of pursuits for its educated youth, and not an adherence to the beaten path of literary careers. Turning to the detailed account of the institutions furnished by the Director, it is observed that in paragraph 121, Tipperah alone is mentioned as a district in which scholarships are provided for female medical education, whereas the Local Self-Government Resolution of 1889-90 records that many other districts have done the same—Midnapore, Burdwan, Bankura, Bakerganj, Chittagong, and all the districts of the Rajshahye Division. During the year certain measures of great importance were matured for the improvement of the working of the Sibpur Engineering College, for which a useful future is anticipated. In fact it is to this College and to the School of Art that Government looks as the chief institutions for imparting technical education in Bengal. The former is the centre of instruction in mechanical and manufacturing industries; artizans are trained to a high degree of skill in general processes, and a site is afforded for the development of various branches of special industry, for the supply of trained teachers to local technical schools, and for advanced instruction. The School of Art occupies a similar position in the extensive field of artistic and decorative industry. The practical importance of drawing and painting has long been recognised. Lithography and wood-engraving have for some time been taught with great and acknowledged success. Modelling has always been practised. The various branches of the fictile art had yet to be taken up. It is probable that the necessity for a School of Design will be felt as manufactures progress and the demand for ornamentation developes. The Lieutenant-Governor recognises that the idea of concentrating technical education at the Sibpur Engineering College and at the Calcutta School of Art is one that can only be carried out gradually, and that its fruits must be looked for in the next generation He will endeavour to maintain these institutions on the highest possible scale of efficiency while encouraging the establishment by District Boards, and through other agencies, of local schools of technical instruction, wherever an effective demand for them may arise. His Honour agrees in the views expressed by the Director as to the possible usefulness and future of such institutions as the Rangpur technical school, and he regrets that so much delay has been allowed to occur in the establishment of the contemplated industrial school at Maimansingh, for which funds have been provided by the liberality of Babu Jogendro Kishor Rai Chowdri.

Female education.

13 The main statistics of female education are entered in the following table:—

Class of schools.	Number of schools.	Number of pupils on the rolls on the 31st March 1891.	Average number on the rolls monthly.	Average daily attendance.	Expenditure. From public funds. Provincial revenue.	District funds.	Municipal funds.	From private funds. Fees.	Other sources.	Total.

	8,940	180,064	....	......		4,85,011		8,10,929		

Besides the figures above, there are also 32,417 girls in boys' schools. The net result of the year is a gain of 85 schools and of 502 pupils. The cost of

the education of girls as compared with boys is much higher. One young lady passed the B.A. examination and four the First Examination in Arts from the Bethune College. Some success was obtained in the medical examinations of the University. Considerable changes have recently been made in the admission test and curriculum of the female certificate class attached to the Calcutta Medical College, with a view to secure a higher standard of general and professional education Students will now be required to have passed the Entrance examination of the Calcutta or some other University, and the course of study is to be extended from three years to four. The special standards for girls' scholarships originally sanctioned for Calcutta and the neighbourhood were extended to the mofussil, but, though highly suitable for girls, have not been adopted to any appreciable extent by schools in the interior. It appears that school managers are not willing to forego the advantage of qualifying by the ordinary departmental standards for the Government scholarships. The idea of separating some portion of the district allotment for scholarships and confining it to the candidates from girls' schools that adopt the special standards is worthy of further consideration.

Education of Europeans.

14. The statistics of European education, as might be expected, do not change materially from one year to another. The following figures for the last four years show the progress made:—

		1887-88.	1888-89.	1889-90.	1890-91.
Schools	...	72	71	68	69
Pupils ...	...	6,541	6,682	6,710	6,829

The number of boys is higher by 41 and of girls by 78 than in 1890. The Government Boarding School at Kurseong—the only Government school for Europeans in Bengal—had 81 students. Of the 6,829 children in the schools, 3,485 were under Roman Catholic management and 1,591 under the Church of England, the remainder belonging to various denominations. The total cost of European education in Bengal was Rs. 6,17,285, of which the Government expenditure amounted to Rs. 1,65,302. The transfer rules have proved very beneficial in preventing the removal of children from school to school, whether capriciously or in order to evade the payment of fees due to the school. The Lieutenant-Governor recognizes that the inspection of European schools under the Code is a very complicated matter, though he regards this as among the less satisfactory features of the Code. One of its results is that it is found necessary to employ two Inspectors to examine between 50 and 60 schools, which is surely a waste of power. The Lieutenant-Governor is aware that great labour has been expended on framing this Code, and that its alteration is attended by many difficulties, but he would wish still further efforts to be made to simplify it in the direction taken by the new revised Code in England, which differs from the old Code in this respect, that the Inspector can give marks to a class by his judgment of its average proficiency, not by examining each child separately and adding up its marks. This system is no doubt more applicable to well established and advanced schools, than to those whose existence is precarious, or which are in a rudimentary stage. A step has been taken in the desired direction by establishing the principle of a fixed grant in the place of grants based on the results of the annual examinations for the most advanced and deserving schools. Three schools during the year have been placed on this list.

Muhammadan education.

15. The number of Muhammadan pupils decreased during the year from 433,653 to 415,428, or by 18,225, and the percentage on the total number of pupils from 29·06 to 28·2. The recorded number of Muhammadan pupils decreased enormously in those classes of private institutions which are specially maintained for youths of that religion, viz., advanced Arabic or Persian schools and Koran schools. Under the former the loss is 758 schools and 8,829 pupils; under the latter, 195 schools and 4,775 pupils, as above mentioned. The general causes which have conduced to a reduction in the recorded number of unaided primary schools affected this class of education also, but the decrease of 765 schools and 13,597 pupils in two municipalities—Dacca and Naraingunge—is due to a scandalous case of fraudulent returns submitted in 1890 by subordinate inspecting officers,

which was discreditable to all the officials concerned. The Lieutenant-Governor concurs with the Director in charging the Deputy Inspector with negligence in not at once detecting this fraud. The want of success of the Muhammadan students at the University examinations has already been noticed; they also fell off at all the departmental examinations except that for the Middle English Scholarship. These fluctuations are perhaps inevitable, but they are disappointing, as they have occurred in spite of Government encouragement and pecuniary support. Special facilities for University education are offered to Muhammadan students in the shape of scholarships; a large number of scholarships and prizes are attached to the Calcutta Madrassa, and every candidate who passed the Entrance Examination from that institution gained either a scholarship or a prize. It is difficult to see how Government can do more to carry out the policy recommended by the Education Commission, and deliberately adopted since, that special schools should be provided for Muhammadans, or the special instructions that they require supplied in ordinary schools. The Government is prepared to show some reasonable regard for the circumstances of this portion of the community; but special favours should not extend to any great degree of inequality as compared with the Hindus, or fall into the extreme of accustoming the Muhamadans to look on themselves as so weak as to require protection from fair competition. The Lieutenant-Governor will give full consideration to any proposals which the Director may feel himself justified in making in the direction of the appointment of Maulvis in middle and high schools under public management, or for the devotion of a portion of the Mohsin Fund to the part-payment of fees in English schools, or for a system of free studentships, or for the reservation of a certain proportion of public scholarships, or for the raising of the limit of age for scholarships in the case of Muhammadans: the exact measures to be adopted cannot be determined in dealing with an annual report. One idea has already assumed shape and is promising. In order to promote primary education among Muhammadans, it is proposed to offer definite recognition as well as encouragement in the shape of stipends to *maktabs* teaching Urdu and Persian, on condition that a certain standard of useful vernacular instruction is introduced, the *maktabs* to be divided into three classes, purely Koran schools being excluded. Sir Charles Elliott will be glad to hear in due course what success is met with in carrying out these proposals. With regard to the elimination of the Koran schools from the returns—a point which the two Muhammadan Assistant Inspectors are agreed in urging on the ground that they have no rightful place there, being altogether disconnected with secular education—the Lieutenant-Governor can only say that, as these schools were introduced into the returns under the orders of the Government of India, they cannot be excluded without consideration in a special report.

Education of aborigines and indigenous education.

16. The number of pupils of aboriginal races under tuition has slightly advanced, viz., from 29,479 to 29,757, an increase of 278. The Christians are more numerous by 304, but the non Christians are 26 fewer. The Director alludes to the difficulty of classifying these races which the returning officers experience. It is a difficulty not confined to educational returns. Taking the figures as they are given, however, there are 2,704 Christians and 14,462 non-Christians being educated in Chota Nagpur, and, as the Director says, it is to the missionaries above all that the credit of educating and civilising the aboriginal races of Chota Nagpur is chiefly due. The pupils in the missionary schools in Chota Nagpur increased from 3,582 to 3,680, while the expenditure fell from Rs. 39,011 to Rs. 32,577, of which Government paid less than two-sevenths. A good example is also shown by Dr. Saise, the Manager of the Karharbari collieries of the East Indian Railway, in providing good schools for the miners' families. The Sonthals in the Burdwan and Bhagulpur Divisions, and the Paharias in the latter, are next in number and are making some progress. One aboriginal pupil passed the University Entrance Examination, and 393 the Departmental examinations. Fewer boys passed the Upper and Lower Primary Examinations than last year.

The development of indigenous education, which was noticed during the three previous years, has not continued, as the following figures show:—

	1887-88.	1888-89.	1889-90.	1890-91.
Schools	10,048	11,709	13,867	13,387
Pupils	96,721	117,284	139,603	132,057

Sanskrit *tols*, elementary schools for boys, and other schools, have increased, but the remarkable loss in Arabic and Persian schools, already noticed, adversely affected the total. During the year Mahamahopadhyaya Mahesh Chandra Nyayaratna, C.I.E., was deputed to visit the Sanskrit *tols*, and his report is awaited.

The Central Text-book Committee.

17. The Central Text-book Committee, to whom since 1875 has been entrusted the duty of approving the books to be used in schools, continued to do good work during the year. Out of 198 books on various subjects received for examination, the Committee approved 53, rejected 107, and still had 38 to peruse. A revised list of authorized text-books for middle schools was published in the *Gazette* of 15th July 1891. Managers of schools are at liberty to choose any of the books in the list, except when special text-books in particular subjects have been prescribed. The Committee have undertaken the preparation of similar lists for the middle classes of high schools and for primary schools. Branch Committees for Behar and Orissa deal similarly with books written in the languages of those parts of the country. The Lieutenant-Governor fully believes that Sir A. Croft's grateful acknowledgments of the laborious and important work done by these Committees are well deserved for their honest and successful discharge of their duties. Their selections have, Sir Charles Elliott has noticed, been much attacked by some members of the Press, but he has no reason to believe that the attacks are well founded: one thing, however, is clear; there would not be such emulation for inclusion in the approved list, and such vehement passions would not be aroused by the competition, unless large pecuniary profits were at stake. Other facts have come to His Honour's knowledge tending to show that the sale of school-books authorised by Government is very lucrative. Considering the poverty of students in general and the compulsion placed upon them to purchase such of these books as are adopted at their school or college, Sir Charles Elliott thinks that the Committees, besides regarding moral and intellectual excellence, which are and should be the first consideration, should also look to the price at which a book is sold, and should not enter any in their lists unless sold at the lowest price compatible with a moderate profit to the author and publisher.

18. The Lieutenant-Governor is glad to take this opportunity to acknowledge publicly his obligations to Sir Alfred Croft, K.C.I.E., who has for so many years, as Head of the Department, been identified with education in Bengal. His thanks are due to the Director for his report, as well as for his administration of his important charge. Sir Charles Elliott also desires to record his appreciation of the good work which is being performed by most of the Inspectors and their subordinates, as well as the Principals, Professors, and their Assistants throughout the Province.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 31*st October* 1891.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.			
	Western Districts.		
	BURDWAN DIVN.		
1	Burdwan Oct. 31, '91 Culna ... Cutwa ... Raneegunge ...	0·03 Nil Nil 0·28	Weather—cool in the morning and hot in the day. Winter rice crop badly suffering for want of rain. Sowing of *rabi* commenced, but rain wanted. Condition of cattle generally good. Water and fodder sufficient. Prices of common rice:— Srs. Burdwan ... ... 16 Culna ... ... 14 Cutwa ... ... 15⅜ Raneegunge ... . 16 } per rupee.
2	Bankoora ,, 31, '91	Nil	Weather—seasonable. *Aman* suffering badly. On high lands it is withering for want of rain. Harvesting of *aus* over. Sowing of *rabi* crops begun. No deficiency of fodder or want of water. Condition of cattle generally good. Common rice selling at 19 seers per rupee at Sudder and 15½ seers at Bishenpore.
3	Birbhum ,, 31, '91 Rampore Haut ...	0·02 0·11	Weather—cool and of late cloudy. Some very light and local showers in parts of the district, but not sufficient to do any material good. Rampore Haut subdivision has done better than Sudder, having had about 4 inches of rain in October, against only 2 inches at Sudder. Prospects unchanged. Crops on high lands, especially in the southern half of the district, are in very urgent want of rain and will be very poor if it does not rain soon. Low land crops are very fair, and are pretty safe. Fodder and water plentiful. Condition of cattle normal. Price of common rice steady at 16 to 18 seers per rupee.
4	Midnapur ,, 31, '91	Nil	Weather—fair; cold at night. *Rabi* crops are being sown. *Aman* rice suffering seriously for want of rain. A few cases of cattle-disease. Prices of common rice:— Srs. Sudder ... ... 16 Contai ... ... 18 Ghatal ... ... 19 Tumluk ... ... 15 } per rupee.
5	Hooghly .. 31, '91 Serampore .. Jehanabad ...	Nil 0·24 Nil	Weather—dry and rather cool. Rain needed all over the district. Winter rice has been greatly affected by want of rain. Water-supply and fodder reported to be sufficient. Cases of small-pox among cattle reported from thanas Bulagar and Polba. Prices of common rice:— Srs. Sudder ... ... 13 Serampore ... . 11½ Jehanabad ... ... 14 } per rupee.
6	Howrah ,, 31, '91 Uluberia ...	Nil Nil	Weather—fine. Prospects of *aman* crop injured by want of rain. Sugarcane satisfactory. Price of common rice 14 seers per rupee. Condition of cattle good. Fodder and water-supply sufficient.
	Central Districts.		
	PRESIDENCY DIVN.		
7	24-Perghs. Nov. 3, '91	Nil	Fair bright weather; getting slowly colder. Harvesting of *aus* and jute completed; outturn estimated at 14 and 13½ annas respectively. Want of rain is being seriously felt everywhere. The long-continued drought has very seriously affected the *aman* crop, especially on the high lands. The worst reports come from the reclaimed Sunderbun lots and the Sudder subdivision. Damage from insects reported from Bussirhat. Cattle disease reported from thana Harowa. Fodder and water for cattle sufficient. Prices stationary.
8	Nuddea Oct. 31, '91 Kushtea ... Meherpur ... Chuadanga ... Ranaghat ...	Nil Nil Nil Nil Nil	Weather—seasonable. Prospects of *aman* very unfavourable owing to continued drought. Sowing of winter crops still going on. Common rice selling at 13 seers 7½ chittacks per rupee. Condition of cattle good, and supply of fodder and water sufficient.
9	Khoolna ,, 31, '91 Bagirhat ... Satkhira ...	Nil Nil Nil	Weather—fine and dry. *Aman* paddy on all high lands suffering severely from want of rain. Outturn will be seriously diminished if no rain falls soon. Fodder and water sufficient. Price of common rice 14½ seers per rupee.
10	Jessore ,, 31, '91 Jhenidah ... Magura ... Narail ... Bongong ...	0·06 Nil Nil Nil Nil	Weather—cool and dry. Rain very badly wanted for *aman* paddy, which is getting dried up except on low lands. Winter crops and indigo are being sown, but they also require rain. Supply of water and fodder plentiful.
11	Murshedabad ,, 31, '91	Nil	Weather—seasonable. Winter rice on high lands is drying up for want of rain. Sugarcane and mulberry doing well. Rain badly wanted. Fodder and water for cattle sufficient.
	RAJSHAHYE DIVN.		
12	Dinagepur ,, 31, '91 Thakurgaon ...	Nil Nil	Weather—seasonable. Prospects of winter rice unfavourable. No expectation of rain. Crops reported to be withering for want of rain. Price of rice has risen both at Sudder and Thakurgaon. Rice is selling at Sudder 11 seers per rupee and at Thakurgaon 11 to 12 seers per rupee. Cultivation of *rabi* crops going on. Condition of cattle good everywhere except in Thakurgaon, where disease has broken out in some villages. Supply of fodder and drinking water sufficient.
13	Rajshahye ,, 31, '91 Nattore .. Nowgong ...	Nil Nil Nil	No rain, sky unclouded, cold weather coming in. State of winter rice reported to be bad everywhere; very bad in some places. In no place will a crop in excess of 8 annas be reaped; in some places not more than 4 annas. Ordinary rice selling at 13 seers per rupee. A little cattle-disease here and there. Drinking water and fodder ample.

Division	No	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*				
		***Central Districts*—concld.**		
RAJSHAHYE DIVN.—*concld.*	14	Rungpur Oct. 31, '91	Nil	Weather—fine with north wind. Prospects of winter rice unchanged. It is slowly coming into ear except on high lands where it is drying up. General average of 8 annas expected. Common rice selling at 12 seers per rupee. Sugarcane promises a bumper harvest. *Kalai* being harvested. Tobacco being planted out Mustard germinating. Fodder plentiful.
		Gaibanda ...	0·08	
		Kurigram ...	Nil	
		Nilphamari ...	Nil	
	15	Bogra „ 31, '91	Nil	Weather—seasonable. No outturn can now be expected from *aman* on high lands. The average outturn for all lands will probably not exceed 8 annas. Lands still under preparation for winter crops. Prospects of the latter good. Price of rice unaltered since last week, *i.e.*, 13½ seers per rupee.
		Sherpur ...	0·85	
		Nowkhilla ...	Nil	
	16	Pubna „ 31, '91	Nil	Weather—fine and cool. *Aman* on one-third of the area sown almost destroyed and has been cut as fodder. For the remaining two-thirds a 7-anna crop is expected. Land is being sown with cold-weather crops, for which rain is badly wanted. Outturn of *aus* has been 12 annas on an average. Price of common rices shows an upward tendency, being 16 seers per rupee at present. Fodder sufficient. No cattle-disease.
	17	Darjeeling „ 31, '91	Nil	Weather—fair. *Bara marua* getting ripe. Sufficient fodder and water for cattle. Prices of common rice:— Srs. Darjeeling ... ... 10 per rupee. Kalimpong ... ... 10 per rupee. Jore Bungalow ... ... 10 per rupee. Pulbazar ... ... 12 per rupee. Nagri ... ... 8 per rupee. Sonadah ... ... 11 per rupee.
	18	Julpigoree „ 31, '91	Nil	Weather—days warm, nights cool. Prospects of *haimanti* paddy not good. Common rice sells at 11 seers per rupee. No cattle-disease. Fodder and water sufficient.
		Eastern Districts.		
DACCA DIVN.	19	Dacca Oct. 31, '91	Nil	Weather—seasonable. Prospects of *aman* on low lands good, but rain wanted for the crop on high lands. *Asrini* crop is being cut. Fodder available. Common rice selling at from 13 to 16 seers per rupee. No cattle-disease.
	20	Furreedpur „ 31, '91	Nil	Weather—cool and seasonable. Prospects of *aman* paddy on low lands fair. High land paddy has withered. Sowing of *rabi* crops commenced. Rice selling at 16, 14 to 16, and 16¼ seers per rupee at Sudder, Goalundo, and Madaripore respectively. Fodder available.
	21	Backergunge „ 31, '91	Nil	Weather—seasonable. State of standing crops not good in the eastern and southern parts wherever the soil is sandy. Rain is much wanted, especially in the Sudder and Bhola subdivisions. Price of common rice varies from 12½ to 18 seers per rupee. Supply of fodder and water sufficient.
	22	Mymensingh „ 31, '91	Nil	Weather—fair. Rain wanted. Standing crops will be much damaged if there be no rain. Condition of cattle good, and fodder and water plentiful. Common rice sells at 14¼ seers per rupee.
CHITTAGONG DIVN.	23	Chittagong Nov. 3, '91	Nil	Weather—fine and clear. Rain urgently wanted. Worms reported to be injuring crops. In some places prospects of crops indifferent. Prices steady.
	24	Noakhally „ 31, 91	Nil	Weather—bright; warm during day, cool at night. Prospects of *aman* rice getting worse owing to continued drought. Prices have risen at Sudder, but not at Fenny. *Rabi* preparations going on and sowings commenced. Condition of cattle and supply of fodder and water satisfactory.
	25	Tipperah „ 31, '91	Nil	Weather—seasonable. Prospects of crops fair. Fodder sufficient. No cattle-disease.
	26	Chittagong Hill Tracts. „ 29, '91	Nil	Weather—comparatively cooler; mornings foggy. Gathering of cotton continues. Ploughing and preparing land for mustard and other cold-weather crops still continues. Last week's rain has done good to plough-paddy, sugarcane and winter crops. Common rice sells at 12¼ seers per rupee.
BEHAR.				
PATNA DIVN.	27	Patna „ 31, '91	0·21	Weather—hot but cool at night. West winds blowing. Paddy badly in want of rain. Plants suffering from drought. *Rabi* and poppy sowings in progress, but prospects marred for want of rain. Prices slightly rising.
		Dinapore ...	0·10	
		Barh ...	0·07	
		Hilsa ...	Nil	
	28	Gya „ 31, '91	0·73	Weather—days hot, nights cool. Late rain has done some good to both rice and *rabi* crops. Sowing of *rabi* going on. Prices of food-grains almost stationary. Supply of fodder and water for cattle sufficient.
	29	Shahabad „ 31, '91	Nil	Cold weather appears to have set in with usual characteristics. Paddy on high lands and unirrigated tracts will be a complete failure. Rain wanted for *rabi* crops; but they are on the whole doing fairly. Some damage is being done by insects in the Sasseram division. Prices rising, and some pressure is being felt by the poorer cultivators in parts of Bhabuah and Buxar subdivisions.
		Buxar ...	0·18	
		Bhabuah ...	Nil	
		Sasseram ...	Nil	
	30	Durbhunga „ 31, '91	Nil	Weather—occasionally cloudy. State of paddy in all high lands is as bad as can be. Low land paddy is still a good crop. In many places paddy has been cut and used for fodder, and the lands ploughed and sown with *rabi* seeds. In other places there is too little moisture for this. Prices rising. Price of *makai* same as last year. Cattle in good condition. Fodder and water sufficient.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR—concld.			
Patna Divn.—concld.			
31	Mozufferpur Oct. 31, '91 Hajipur ... Sitamarhi ...	Nil Nil Nil	Weather—seasonable. Prospects of paddy crop poor. Want of rain is being seriously felt everywhere. Artificial irrigation going on wherever it is possible. Fodder for cattle and water-supply still plentiful. Prices of common rice:— Srs. Sudder .. .. 13 } per rupee. Sitamarhi ... . 13 } Hajipur ... ... 17 }
32	Sarun " 31, '91	0·05	Weather—fine; getting colder. A thunderstorm on night of 24th. Rain much wanted for rice crop. *Rabi* germinating well, but more rain required. The thunderstorm of 24th produced as much as $\frac{3}{10}$ths of an inch of rain in places. Fodder and water sufficient. Price of common rice 14 seers per rupee.
33	Chumparun " 31, '91	Nil	Weather—cool at night. *Rabi* sowings in progress. *Bhadoi* crops are being threshed. Estimated average outturn of *aghani* rice in Bettiah 11 annas and in Sudder 9 annas. Supply of fodder and water for cattle sufficient.
Bhagulpore Divn.			
34	Monghyr " 31, '91 Begusarai ... Jamui ...	Nil Nil Nil	Weather—sky clear and bright sun. A thunderstorm seemed coming on on Thursday (29th) evening, but passed away to the west. Winter rice is suffering severely from drought. *Rabi* in Sudder and Begusarai sub-divisions fair, but in Jamui poor. Scarcity anticipated first to be felt in Bukhtiarpur. Fodder so far sufficient. Rice selling at from 12 to 15 seers per rupee.
35	Bhagulpur " 31, '91	Nil	Weather—days hot, nights cool. Rain badly wanted everywhere. No change in the prospects of crops in the subdivisions of Soopaul and Madehpura. Health of cattle good and fodder plentiful. Common rice 14½ seers per rupee.
36	Purneah " 31, '91 Kishengunge ... Arrareah ...	Nil Nil Nil	Weather—nights cool; still hot in the day. Preparation for *rabi* sowings is being pushed on and *rabi* being sown in many parts. Rice crop suffering from want of rain. Estimated outturn in Arrareah 7 annas. Supply of fodder and water sufficient. Prices of common rice:— Srs. Sudder ... . 11 } per rupee. Kishengunge ... ... 10 } Arrareah ... . 15 }
37	Maldah " 31, '91	Nil	Weather—days still warm, but nights cool with heavy dews. Want of rain has affected winter rice on high lands. It is urgently needed now. Prospects of *kalai* continues favourable. Sowing of *rabi* crops not yet finished. Condition of cattle good. Supply of fodder and drinking water satisfactory. Rice sells at from 12 to 17 seers per rupee.
38	Sonthal Perghs. " 31, '91	0·02	Clouds gather and disperse, but not much rain. There have been slight showers. General want of rain is causing fear of shortness of the upland rice. The crop will be very short in Godda and Deoghur. Rain still possible. Fodder sufficient. At Doomka price of common rice 15 seers per rupee.
ORISSA.			
Orissa Divn.			
39	Cuttack " 31, '91	Nil	Weather—dry and hot. *Rabi* crops sown. Both *laghu* and *guru sarad* crop in ear. Rain much wanted for *laghu* and for cold-weather crops as *mung*, &c. Common rice sells at 14 seers 7 chittacks per rupee. Fodder-supply sufficient except in parts of Kendraparah.
40	Pooree " 29, '91 Pipli ... Khurda ... Banpur ...	Nil Nil Nil 0·21	Weather—rather hot. Re-weeding of winter crop (*sarad*) going on. *Bara laghu* coming into ear, and early *laghu* ripening. A very bad harvest possible if no more rain falls shortly. Common rice sells at from 15 to 24 seers per rupee. Cattle disease reported from some parts of the district.
41	Balasore " 31, '91	Nil	Weather—cloudy. Practically no rain this month. Another week of drought may prove very serious for the winter rice crop. Common rice sells at 19 seers per rupee, against 21 seers in the previous fortnight. Sugarcane estimated at 14 annas for the present.
CHOTA NAGPORE			
South-West Frontier Agency.			
Chota Nagpore Divn.			
42	Hazaribagh Oct. 31, '91 Giridih ..	Nil Nil	Weather—cold and at intervals cloudy. Want of rain is being still felt for the paddy crop. *Rabi* sowing continues. Prices of food-grains stationary. Rice selling at from 12 to 16 seers per rupee.
43	Lohardugga " 31, '91 Palamow (up to 25th) ...	0·24 Nil	Weather—cloudy. Harvesting of *gora* rice finished. *Marua* is being harvested. Rain badly wanted for winter rice and for sowing *rabi* crops. Fodder and water for cattle ample. Common rice selling at 15 seers per rupee.
44	Singbhoom " 31, '91	0·06	Weather—seasonable; cloudy at times. Prospects everywhere very satisfactory. Paddy being reaped everywhere. Common rice sold at 24 seers per rupee in Chybassa last market day.
45	Manbhoom " 31, '91 Govindpore ..	0·22 Nil	Weather—seasonable. Prospects of crops good. More rain wanted. Rice selling at from 16 to 20 seers per rupee. Water and fodder-supply sufficient.

* Mean of 5 days. † Mean of 4 days. ‡ Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ... The humidity of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

for the week ending Saturday, the 31st of October 1891.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	District Observations. Rainfall. Of week. Mean for district.	Of week. Normal mean.	Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 16th October 1891. Mean for district.	Since 16th October 1891. Normal mean.	Since 16th October 1891. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation — . indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the 3rd November* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING SATURDAY, THE 31ST OF OCTOBER 1891.

THE most noticeable feature in the weather at the close of the previous week was the existence of a barometric depression off the Madras coast. The depression was by no means a severe one, but nevertheless it influenced the weather conditions over a large area, and in Orissa and Lower Bengal at the close of the week the skies had clouded over and a few rain showers were reported, while even at the inland stations in the province the influence of the depression was noticed, though not so clearly as at the southern stations. On the 25th, or the first day of the present week, the depression had crossed the Madras coast and was well inland, so that from this day the weather conditions began to improve in the Bay, and with the disappearance of the disturbance from the Bay also the weather in Bengal became more settled and more of the ordinary cold season type. On the 25th pressure, however, continued to fall slowly to moderately in Bengal, and it was decidedly in defect of the normal. The moist air current which had been forced northwards from the Bay by the depression still gave a rather high humidity generally in Bengal, while the sky also remained cloudy. Light and variable winds also obtained, and light local showers were reported in some of the districts of Behar and North Bengal. On the 26th pressure commenced to increase slowly, but otherwise conditions had not altered to any material extent, except that the sky had begun to clear, though again on this day a few light local showers were reported. On the 27th pressure had risen briskly, though there was a very shallow low-pressure area in the centre of the province, and temperature commenced to fall moderately to rapidly, but winds continued very light. Humidity decreased in Behar, while the sky became almost cloudless. Practically no rain was reported on this day. On the 28th the barometer fell in the west of the province and rose elsewhere, and the distribution of pressure became very uniform. Winds continued a little variable, but they were becoming generally northerly though light in force. On this day also there was practically no rain. On the 29th pressure rose in the west and north of the province and fell elsewhere, and the general pressure was considerably in excess of the normal. The northerly element in the wind directions strengthened. Cloud proportion and humidity also increased, particularly at the western stations, and again local showers commenced in Chutia Nagpur, Behar, and North Bengal. On the 30th pressure fell slowly at the south-eastern stations, while it increased moderately elsewhere, and the distribution of pressure became fairly normal for the cold weather. Temperature also fell rapidly and became almost normal, while humidity and cloud proportion decreased, though there were still local showers reported in Behar and parts of South-West Bengal. On the 31st pressure rose by about 0·07," and the general distribution almost resembled that of the middle of the cold weather. Temperature fell moderately and became generally below the normal, while a steady and fairly strong northerly current was blowing over the whole province. The local rain showers also practically ceased and ordinary north-east monsoon weather obtained on this day.

In the Bay conditions call practically for no remarks up till nearly the close of the week, when a barometric depression apparently began to form in the south of the Bay, but up till Saturday the 31st, it had not concentrated to any extent to form a storm, and probably then only existed as a diffused low-pressure area with squally weather over the southern part of the Bay up to perhaps lat. 10° or 11° N.

Pressure.—The general variations of pressure from day to day have been already described. The mean pressure for the week has been distinctly in excess of the normal in all districts, the usual excess ranging from about 0·03" to 0·06". The excess on the whole is largest in South-East Bengal, where it equals about 0·06", and smallest in Assam and Chutia Nagpur, where it equals about 0·025."

Temperature—At the beginning of the week was above the normal, but at its close it was somewhat in defect. For the whole week the mean temperature of the province has been in excess of the normal by about half a degree, but in Behar the excess has equalled from one to one and-a-half degrees, while, on the other hand, temperature has been 0·8° in defect in East Bengal. In Assam the temperature for the week has been below the normal by 1·4°.

Rainfall.—The rainfall for the week has been quite unimportant as regards the province generally, though a few local showers have fallen in the districts of Cuttack, Burdwan, Beerbhoom, Moorshedabad, Bogra, Darjeeling, Gya, Patna, Sonthal Pergunnahs, and Manbhoom, which undoubtedly will be valuable in certain local areas. The average falls in these districts are, however, generally very small. The general rainfall slightly exceeds half an inch in the Darjeeling district, and equals about a fifth of an inch in the districts of Beerbhoom and West Burdwan, Bogra, Gya, and Manbhoom, while the average fall in Cuttack and Moorshedabad districts is about a tenth of an inch, but in the other districts mentioned the falls only average a few hundredths of an inch.

The present week completes the month of October, and the rainfall for the month has thus again been exceptionally deficient in all divisions Average falls of only between one and two inches have been received in Orissa, East Bengal, North Bengal, and Behar; in South-West Bengal the fall has only averaged about three-quarters of an inch, while in Chutia Nagpur the fall is the very small amount of about a third of an inch only. Compared with the normal falls for the month, the actual falls in October have only

equalled the following percentage amounts:—Orissa 20, South-West Bengal 18, East Bengal 34, North Bengal 53, North Behar 48, South Behar 50, and Chutia Nagpur 22 per cent.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 31st of October 1891:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 18th Oct. 1891.

The total fall from 1st January to 31st October 1891	46·42
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	64·47

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

△, dew ; ≡, fog.

REVISED REGULATIONS FOR THE FOREST SERVICE BRANCH OF COOPER'S HILL COLLEGE.

REVENUE DEPARTMENT.

FOREST.

The 6th November 1891.

THE following is published for general information.

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

Circular No. 24-F.

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department (Forests),—dated Simla, the 24th September 1891.

READ—

The following extract (paragraph 1) from a Despatch from Her Majesty's Secretary of State for India, No. 50 (Revenue), dated the 18th June 1891, forwarding, with remarks, the revised "Regulations for the Forest Service Branch of the Royal Indian Engineering College, Cooper's Hill":—

In accordance with the request contained in Your Excellency's telegram of the 12th May, twelve Forest appointments will be offered for competition in 1892. Twenty-five copies of the revised Regulations for that year are enclosed.

REGULATIONS FOR THE FOREST SERVICE BRANCH OF THE ROYAL INDIAN ENGINEERING COLLEGE, COOPER'S HILL.

[*Post Town, Staines, Railway Station, Egham, Telegraph Station, Englefield Green.*]

STAFF OF THE COLLEGE.*

President—General Sir Alexander Taylor, G.C.B., R.E.
Secretary—J. G. Whiffin, Esq., Paymaster-in-Chief, R.N., retired.
Bursar—J. P. Pasco, Esq., R.N., retired.
Chaplain—Rev. C. Crosleigh, D.D.

* The staff of the College is only given in so far as it concerns the Forest Branch.

Engineering Branch.

Assistant Professor of Engineering—A. H. Heath, Esq., Assoc. Mem. Inst. C.E.
Professor of Surveying—Major-General E. H. Courtney, R.E.
Instructor in Geometrical Drawing—T. H. Eagles, Esq., M.A., Assoc. Inst. C.E., F.R.I.B.A.
Lecturer in Accounts—J. C. Hurst, Esq.
Instructor in Freehand Drawing—Russel Dowson, Esq.

Mathematical Branch.

Professor of Mathematics—G. M. Minchin, Esq., M.A.

Natural Science Branch.

Professor of Chemistry—Hebert McLeod, Esq., F.R.S.
Professor of Physics—W. N. Stocker, Esq., M.A., Fellow of Brasenose College, Oxon.
Lecturer in Geology and Mineralogy—[Professor not yet appointed].

Forestry Branch.

Principal Professor of Forestry—W. Schlich, Esq., PH.D., F.L.S., late Inspector-General of Forests to the Government of India.
Assistant Professor of Forestry—W. R. Fisher, Esq., Conservator of Forests, Northern India.
Professor of Botany—H. Marshall Ward, Esq., M.A., F.R.S., F.L.S., Fellow of Christ's College, Cambridge.
Lecturer on Entomology—W. F. H. Blandford, Esq., M.A., Fellow of Christ's College, Cambridge.
Lecturer on Chemistry of Soils and Vegetation—A. H. Church, Esq., M.A., F.R.S.
Instructor in German—T. H. Dittel, Esq.
Lecturer on Forest Law—B. H. Baden Powell, Esq., C.I.E., late of the Indian Civil Service.
Director of Practical Study in Forestry on the Continent—Sir Dietrich Brandis, K.C.I.E., PH.D., F.R.S., late Inspector-General of Forests to the Government of India.*

[*The arrangements hereinafter described are subject to revision under the orders of the Secretary of State for India.*]

1. The Royal Indian Engineering College is primarily maintained, under the orders of the Secretary of State for India in Council, for the education of candidates for the service of Government in the India Public Works, Telegraph, and Forest Departments; but it is open to the extent of the accommodation available to all persons desirous of following the course of study pursued in it.

India Forest Department Appointments.

2. The Examination usually takes place in June of each year.

3. The number of candidates to be selected annually varies according to the requirements of the Forest Service in India: the figures as regards each particular year will be advertised from time to time. *In 1892 there will be 12 appointments offered for competition*

4. Candidates for the Indian Forest Department are selected under the following arrangements:—

(*a*) An applicant must be a natural-born British subject, and must be above 17 and under 20 years of age on the 1st June of the year in which he competes for an appointment. He must be unmarried, and if he marries before reaching India he will forfeit his appointment.

(*b*) An applicant must send† to the Revenue Department of the India Office, on or before the 1st day of May of the year in which he proposes to compete—

(1) His name and parentage, a certificate or other satisfactory evidence of the date of his birth, and the written consent of parent or guardian that his name should be recorded as a candidate.

(2) A statement of the places of education at which he may have been accompanied by testimonials of good conduct, during the last four years.

* Sir D. Brandis is not on the staff of the College.
† There is no form of application; the document specified in Clauses (1) and (2) should be enclosed in a covering letter addressed to the Secretary, Revenue Department, India Office, London.

(*c*) Applicants will have to appear before a Medical Board* at the India Office, particular stress being laid upon good vision and hearing. A physical test will also be imposed, so as to ensure the selection of persons of active habits and powers of endurance.

(*d*) The applicants who have successfully passed the medical examination and the physical test will be required to undergo an examination before the Civil Service Commissioners† in the following subjects (Classes I to III), marks being assigned as follows :—

No.	Subject	Marks.	
	CLASS I.—OBLIGATORY SUBJECTS.‡		
1.	Mathematics (lower), viz., Algebra up to and including the Binomial Theorem; the theory and the use of logarithms; Euclid, Books I to IV and VI; Plane Trigonometry up to and including the solution of Triangles and Mensuration.	2,500	In each of these subjects a candidate must obtain not less than one-third of full marks in order to qualify.
2.	English composition	1,000	
3.	German (400 for colloquial) ...	2,000	
	CLASS II.—OPTIONAL SUBJECTS.‡		
4.	Mathematics (higher), including Analytical Geometry, Conic Sections, Statics, and Dynamics	2,000	A candidate may take any two, but not more than two, of the optional subjects. Under "Optional Subjects" Nos. 9, 10, 11 and 12, the examination will be partly practical.
5.	French (400 for colloquial)	2,000	
6.	Latin	2,000	
7.	Greek	2,000	
8.	English History. There will be set: one general paper; one paper limited to a fixed period, which will be from the year 1688 to the year 1727 for the examination of 1892	2,000	
9.	Botany, viz., the elementary parts of vegetable morphology histology, and physiology, and the principles of a natural system of classification as illustrated by the more important British natural orders. Candidates will be required to describe plants in technical language. Questions will not be set on vegetable palæontology or on the geographical distribution of plants	2,000	
10.	Chemistry, viz., the elements of Inorganic Chemistry	2,000	
11.	Physics. Elementary properties of Electricity, Magnetism, Heat, Light, and Sound	2,000	
12.	Physical Geography and Geology, chiefly economic; including the recognition of the more familiar minerals and rocks, and their properties and uses ...	2,000	
	CLASS III.—ADDITIONAL SUBJECTS.		
13.	Freehand Drawing	500	Either or both of these subjects may be taken in addition to the obligatory and the two optional subjects.
14.	Geometrical Drawing	300	

(*e*) From the competitors who attain the above-mentioned minima of marks in obligatory subjects and satisfy the requisite conditions in other respects, the Secretary of State will select candidates in order of merit as probationers to enter the College, where they will be futher trained for the Forest Service of India.

(*f*) If the full number of competent probationers required in any year cannot be obtained from the persons so examined, the Secretary of State reserves a discretion to fill up the deficiency by selecting any other person or persons who may satisfy the authorities of the College that he or they are properly qualified to become probationers for the Forest Service.

* With a view to prevent parents and guardians from incurring the inconvenience and expense of preparing candidates who may be physically unfit for the Forest Service, it is suggested that, before any such preparation is begun, candidates be submitted to examination by the medical adviser of the family, or any other qualified medical practitioner, with regard to the following points :—

1. A weak constitution.
2. Defective vision.
3. Impaired hearing.
4. The existence of any congenital defect.

It is to be understood that this private examination is merely suggested to lessen the chances of disappointment, and that it is by no means intended to take the place of, or to influence in any way, the official examination.

On the subject of the standard of eyesight required for the Indian services, a pamphlet has been published, under the authority of the Secretary of State in Council, by Messrs. Churchill and Sons, 11, New Burlington Street.

† A fee of £4 is required, which can be paid by means of a stamp of that amount. Instructions on this point will be issued to candidates the day before the examination.

‡ Attention is invited to the appended Syllabus, giving further details regarding the extent and character of the examination.

5. The course of study for candidates for the India Forest Service extends over about three years, divided into nine terms. During the first eight terms the candidates will prosecute their studies at the College, and during the remaining term they will be instructed, under suitable supervision, in such British or Continental forests as may be selected for the purpose. Excursions will also be made for purposes of instruction, both during term time and during part of the vacations. The cost of all such tours or excursions is borne by the Secretary of State (see paragraph 9).

6 Each annual session begins in September, and is divided into three terms, with vacations of about four weeks at Christmas, two weeks at Easter, and eight weeks in the summer.

7. A charge of £61 for each of the first eight terms and £60 for the ninth term is made for each student; the amount must be paid terminally in advance to the Bank of England. Receivable orders, with full directions as to the mode of payment, will be forwarded from the India Office to the parents or guardians, shortly before the fees fall due. A student will not be allowed to come into residence until his fee has been paid.

8. A deposit of £5 is required to be paid by each student on admission to the College, as caution money, to cover charges incurred by him for damage to books, instruments, &c., or any College bills outstanding on leaving the College. Any balance over and above such charges will be repaid. This deposit is to be paid with the fee for the first term, making the total payment on that occasion £66.

9. The foregoing payments cover all charges for tuition, board according to the College tariff, lodging with washing, and ordinary medical attendance while in residence at the College. When students are on tour and during the course of practical instruction, whether in Great Britain or on the Continent, the Secretary of State will defray the expenses of (1) board, lodging, and washing (the maximum expenditure on such account being 10*s*. per diem), (2) travelling expenses, and (3) fees to local Forest officers, &c.

Students are required to provide their own class books and drawing instruments. Drawing paper, drawing boards, and surveying instruments are provided by the College.

10. The prescribed course of study at present comprises the following subjects:—

I.—*Engineering.*

1. Geometrical Drawing.
2. Freehand Drawing.
3. Surveying.
4. Road construction.

II.—*Natural Science.*

1. Inorganic Chemistry.
2. Chemistry of Soils and Vegetation.
3. Physics.
4. Geology and Mineralogy.
5. Entomology.
6. Botany.

III.—*Forestry*, Theoretical and practical.

IV.—*Miscellaneous.*

1. German.
3. Elements of Law.
3 Accounts.
4. Drill and Gymnastics.

11. Every student is required to conform to the College rules, to exhibit due diligence in his studies throughout the course, and to give evidence of satisfactory progress in such manner as may be required, failing which, or in the event of serious misconduct, he will be liable to be removed from the College, or to be sent back from the forest tour, which may entail the loss of his appointment.

12. During the course of study, the proficiency of the students will be tested by periodical examinations, and on the termination of their studies there will be a final examination. Each student may also, at the discretion of the Secretary of State for India, be required to appear before the Medical Board at the expiration of the first year of residence at the College, and should the result be unsatisfactory he cannot claim to be allowed to complete the course.

13. The subjects enumerated in paragraph 10 are grouped in certain main branches of study,* and a fixed minimum of qualification is required in each branch and in the subjects taught during the forest tours, as well as a certain minimum for all branches taken together. Students who obtain these minima will receive the College diploma in Forestry.

14 Candidates who have obtained this diploma and are found to be of sound constitution and free from physical defects which would render them unsuitable for employment in the Forest Department (the final decision on which points will rest with the Secretary of State for India) will be appointed Assistant Conservators in the Forest Department of India in the order of their standing at the end of the final examination. They will be allowed before leaving the College to choose the provinces in which they desire to be first employed,

* For details see Royal Indian Engineering College Calendar.

according to the standing in which they pass out of the College. But this choice can only be exercised according to the available vacancies in the different provinces, and on the understanding that officers are at all times liable to be transferred from one province to another at the pleasure of the Government of India.

15. Within a month of his nomination as Assistant Conservator, each nominee must sign articles of agreement describing the terms and conditions of his appointment; he must embark for India when required to do so by the Secretary of State, and will be provided with a free passage. Failure to embark at the stated time will, in the absence of satisfactory explanation, lead to forfeiture of appointment.

16. The pay of an Assistant Conservator of Forests will begin from the date of arrival in India. Probationers who acquit themselves creditably during their course at Cooper's Hill College will begin on a salary of Rs. 350 a month; those who fall short of the required standard, though they may have obtained the College diploma in Forestry, will begin on Rs. 250 a month; and this difference of salary will continue until the first Departmental Examination is passed in India. It will rest with the President of the College, in consultation with the Principal Professor of Forestry, to decide which probationers, if any, have failed to qualify for the higher initial salary.

17. Promotion, leave, and pension will be regulated by the rules of the Service for the time being. Further information on this point can be obtained from the Revenue Secretary, India Office, London.

18. Every candidate, before proceeding to India, will be required to furnish to the President of the College satisfactory evidence of his competency in riding.

GENERAL RULES.

19. Chemical, physical, and botanical laboratories, a forestry museum, a forest nursery, a library and gymnasium are attached to the College. Means are also provided for the practice of photography. Students making use of the laboratories are supplied with the needful apparatus.

20. The responsibility for the discipline and management of the College and for the superintendence of the studies is vested in the President, under the control of the Secretary of State for India.

21. The students are distributed in divisions, under personal charge of one of the Professors or Instructors selected by the President; such tutor being responsible for exercising the proper degree of personal supervision over each student in his division, and for conducting necessary correspondence with the student's parents or guardians.

22. Each student residing in the College is provided with a separate room, and with fuel and light, also with the necessary attendance. Furniture and bedding are supplied by the College, but each student is required to provide his own towels and bed linen. Meals are taken in hall. Wine and beer are not included in the ordinary fare, but can be obtained from the College cellar at fixed prices.

23. A chapel is attached to the College, which the students residing in the College are expected to attend, unless specially exempted.

24. Every student will be required to go through a course of gymnastics and also of military exercises, including the use of the rifle.

25. Students are required to wear academical dress, under such regulations as may be prescribed from time to time.

Students not nominated for the Indian Forest Service, but desirous of obtaining a Diploma in Forestry from Cooper's Hill College.

26. Students not nominated for the Indian Forest Service may be received into the College, as far as the available accommodation permits. Such students may pass through the course of instruction prescribed for the nominees of the Indian Forest Service, as detailed above, or they may be permitted to participate in the instruction given in certain subjects only. On attaining the prescribed minima of marks in the several branches of study and in totals as laid down above, they will receive, as the case may require, either the College Diploma in Forestry or special certificates showing in what subjects they have followed the instruction, and with what result.

27. Candidates who desire to be admitted under paragraph 26 may submit the necessary application at any time, but not later than the 15th day of June of the year named for admission, except with the special permission of the President. The application must be made on the prescribed forms, which can be obtained from the Secretary of the College.

28. Candidates whose applications are found satisfactory as to character and in other respects will be required to undergo an examination, to be held at the College, about the last week in June of the year for admission. The object of the examination will be to ascertain whether the candidate is qualified to follow the course of instruction with advantage (or certain parts of it, as the case may be). Candidates who do not come up to the required standard will not be admitted to the College.

The President may dispense with the whole or any portion of this examination in the case of a candidate who produces a University diploma, or other similar certificate granted by a recognized examining body.

29. Candidates admitted to the College under paragraph 26, who propose to pass through the full prescribed course of study, will be required to pay the same fees in every respect as those paid by the nominees for the Indian Forest Service. Candidates who do not become resident, and are admitted only to certain subjects of study, will be required to pay the fees which may be fixed in each special case in consideration of the extent of their studies. The candidates of both classes will be required to abide by the general rules of the College.

India Office.
June 1891.

FOREST EXAMINATION.

SYLLABUS

Showing the Extent and Character of the Forest Examination from and after June 1892.

In a letter addressed to the Civil Service Commissioners on the subject of the Examinations for admission into the Royal Military Academy, Woolwich, and the Royal Military College, Sandhurst, the Director-General of Military Education observes:—"The main object to be borne in mind with reference to the Entrance Examination is to secure a youth who has had a thoroghly well-grounded liberal education as an English gentleman. Any curriculum which renders those who are unsuccessful unfit for other professions is greatly to be deprecated." The Regulations for the Forest Examination, which follow the lines of the Woolwich Examination, are intended to provide a test that the candidates have received such an education as is indicated in these words. By these Regulations certain of the subjects specified are prescribed as obligatory for all competitors, while, in the choice of the subjects described as optional, allowance is made for varieties of taste and inclination in caeh candidate. In view of the influence which the Regulations must necessarily exercise on the education of candidates for admission to the public service, the Civil Service Commissioners deem it expedient to specify, with more fulness than in the Regulations themselves, the character of the Examination which, in June 1892 and afterwards, the candidates will be called upon to undergo.

CLASS I.

(OBLIGATORY SUBJECTS.)

Mathematics.—The extent of the Examination will be as defined in the Regulations.

English Composition.—An Essay to be written on one of several subjects specified by the Civil Service Commissioners on their Examination Paper.

German.—There will be translations of unseen passages from German into English and from English into German; the knowledge of pronunciation will be tested by Dictation and the *vivâ voce* Examination. The passages for translation will be taken, mainly, from standard authors (Schiller, Lessing, Alexander v. Humboldt, Ranke, &c.), and a few simple questions may be asked on the passages set, as to the structure and character of the language, and allusions of obvious and general interest.

CLASS II.

(OPTIONAL SUBJECTS.)

Higher Mathematics.—The extent of the Examination will be as defined in the Regulations.

Latin.—Passages will be set for translation into English selected from the authors usually read in schools. Passages from English authors will be given for translation into Latin prose and verse, but candidates will be allowed, in the place of verse composition, to answer questions of a simple character, which will test whether they possess a fundamental knowledge of the grammar of the language, and such an elementary acquaintance with Roman History as is required for the intelligent study of the books they have read.

Greek.—Passages will be set for translation into English from the authors usually read in schools, and in other respects the Examinations will proceed on the same lines as in Latin.

French.—The passages for translation will be taken from standard authors (Corneille, Madame de Sévigné, Guizot, Taine, &c.), and in other respects the Examination will proceed on the same lines as in German.

English History.—The General Paper in this subject will test whether the candidates are accurately acquainted with the facts of English History, and also possess an intelligent knowledge of the meaning of the facts. The paper on the fixed period will, of course, require from the candidates more minute knowledge than the German Paper.

Botany, Chemistry, Physics, Physical Geography and Geology.—The standard of Examination in these subjects will be such as may be reasonably expected from the education given at schools possessing appliances for practical instruction, such as a laboratory, &c. A considerable portion of the marks will be allotted for the proficiency shown in the practical part of the Examination.

GENERAL.

Handwriting.—In estimating the papers of candidates, a limited number of marks, namely, 100 out of the maximum allotted to each subject, are held to be assignable for handwriting.

ORDER.—Ordered that a copy be forwarded, for information, to the Governments of Madras and Bombay and the Local Governments and Administrations noted in the margin, the Inspector-General of Forests, and the Comptroller and Auditor-General.

Bengal	Assam.
North-Western Provinces and Oudh.	Coorg.
Punjab.	Ajmere.
Central Provinces.	Andamans.
Burma.	Hyderabad.

Ordered also that a copy be forwarded to the Foreign Department for communication to the Agent to the Governor-General in Beluchistan; and that these papers be published in the Supplement to the *Gazette of India.*

(True Extract.)

E. C. BUCK,

Secretary to the Government of India.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE HOWRAH BRIDGE FOR THE YEAR ENDING 31ST MARCH 1891.

No. 2650 Marine.

GOVERNMENT OF BENGAL—MARINE DEPARTMENT.

Dated Calcutta, the 9th November 1891.

RESOLUTION.

READ—

The Administration Report of the Howrah Bridge for the year ending the 31st March 1891.

Read again—

Marine Proceedings (A) for December 1890, Nos 5-7, being the Administration Report of the Howrah Bridge for 1889-90, and the Resolution recorded thereon.

The following statement shows the actual receipts and expenditure of the bridge during the year under review as compared with the previous nine years:—

PARTICULARS.	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.	1888-89.	1889-90.	1890-91.
RECEIPTS.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts from Railway Traffic	3,00,038	3,25,550	3,70,501	2,89,125	3,53,210	4,02,405	2,91,638	1,28,985	1,10,727	1,28,064

Proportion of salary of Traffic Manager ...	...	...	...	...	.	...	4,500	4,500	875	..
Total ...	2,34,152	1,94,545	1,91,721	1,90,346	2,14,925	1,87,021	1,52,607	2,04,241	1,41,771	1,47,066
Net revenue ...	2,20,475	2,91,136	3,44,974	2,70,070	3,15,087	4,11,235	3,07,662	60,475	27,055	31,958
GRAND TOTAL ...	4,54,627	4,85,681	5,36,695	4,60,416	5,30,012	5,98,256	4,60,269	2,64,716	1,68,826	1,79,024

2. Owing principally to an increase in the receipts from railway traffic, the income of the year exceeded that of 1889-90 by Rs. 10,198, and it exceeded by Rs. 21,427 the estimate (Rs. 1,57,597) of the Committee appointed by the Government in January 1888 to consider the revised scale of tolls and fees which should be levied after the bridge debt had been paid off.

3. Excluding the cost of plant obtained for lighting the bridge by electricity and payments made to the Government on account of the sinking fund on the consolidated and debenture loans of the Port Trust, the expenditure exceeded that of the previous year by Rs. 5,295. This increase was partly due to the purchase of a new pontoon for Rs. 16,016, which will be used when occasion arises, and partly to an increase of about Rs. 8,000 in Municipal taxes: on the other hand there was a decrease of about Rs. 20,000 in working expenses and repairs, which should have been explained. The policy of the Commissioners in making provision for the gradual renewal of the pontoons has the Lieutenant-Governor's approval.

4. The net revenue of the year under review amounted to Rs. 31,958, making, with the net revenue of the previous years since the bridge was opened for traffic, a total net revenue of Rs. 34,59,516.

The subjoined statement exhibits how the net revenue has been appropriated:—

	To end of 1889-90.	In 1890-91.	Total.
	Rs.	Rs.	Rs.
Sinking Fund paid to Government on the Bridge debt	22,41,800	......	22,41,800
Proportion of Sinking Fund on consolidated loan due to Government for Head Office and officers' quarters paid to Government	12,026	1,142	13,168
Proportion of Sinking Fund on debenture loans set aside with the Trustees of the Commissioners' Debenture Loan Account	16,248	2,152	18,400
Reserve Fund	7,71,978	......	7,71,978
Pontoon Renewal Fund	48,246	......	48,246
Contribution for the following new works:—			
Flat *Howrah*	20,000		
Reserve Section	8,000		
Tug-steamer *Hetty*	1,35,642		
Ferry-steamer *Buckland*	1,23,374	......	3,20,225
Police quarters	16,573		
Office machinery and tools for workshop ...	13,321		
Gearing for drawbridge	891		
Two iron buoy boats for floating fenders ...	2,424		
Electric lighting plant, &c.	......	42,050	42,050
	34,10,523	45,344	34,55,867
Balance ...	......	......	3,649
Total ...	......	......	34,59,516

5. The sum of Rs. 42,050 has been appropriated from the surplus revenues of the bridge to meet the cost of lighting the bridge by electricity. The working expenses of this system are estimated to amount to Rs. 4,660 per annum against Rs. 5,448, the cost of lighting the bridge by gas. The estimate, however, is exclusive of the interest on the capital outlay, and if it be taken into account at 4 per cent., the annual expenditure amounts to Rs. 894 more than that incurred on lighting the bridge by gas. On the other hand, with the new arrangement the lighting is increased twenty-six-fold. The electric light has been brought into use since the close of the year.

6. The bridge was opened for the passage of vessels on 145 occasions, including 41 openings on Sundays on special applications. The number and description of the vessels which passed through it on these occasions are shown in the subjoined statement: the increase in the number of sea-going vessels indicates greater activity in the dockyards above the bridge.

	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.	1888-89.	1889-90.	1890-91.
Sea-going vessels	442	469	403	366	205	331	380	302	414
Inland steamers and flats ...	664	733	944	1,102	846	899	878	841	1,059
Steam-tugs	409	361	342	406	387	397	456	491	540
Port Commissioners' vessels	42	58	56	69	56	46	20	53	92
Government steamers and flats ...	..		10	6	10	6	7	16	3
Total	1,557	1,621	1,755	1,949	1,596	1,679	1,741	1,703	2,110

7. No sea-going vessels collided with the bridge in passing through the opening, but there were 149 collisions of other vessels against 91 and 115 in 1888-89 and 1889-90, respectively. The increase is said to be due to the strong freshots which prevailed during the rainy season of 1890.

ORDER.—Ordered that a copy of the Resolution be forwarded to the Bridge Commissioners for information.

Ordered also that this Resolution be published in the Supplement to the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

J. M. McNEILE, *Col.*, R.E.,

Secretary to the Government of Bengal.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE COMMISSIONERS OF THE PORT OF CALCUTTA FOR THE YEAR 1890-91.

No. 2631 Marine.

GOVERNMENT OF BENGAL,—MARINE DEPARTMENT.

Dated Calcutta, the 9th November 1891.

RESOLUTION.

READ—

The Administration Report of the Commissioners of the Port of Calcutta for the year 1890-91.

IN the Resolution on the Administration Report of the Commissioners for the year 1889-90, the Lieutenant-Governor noticed the delay that had occurred in the submission of the report, and expressed a hope that the Commissioners would arrange for its more punctual submission. The report for the year under review was not, however, received until the 20th of October. The Lieutenant-Governor desires to invite the special attention of the Commissioners to this matter, and would ask them to so arrange that the report may in future years reach the Government on or before the 15th of September. His Honour notices that the latest report of the Auditors was furnished on the 3rd of July, and he thinks therefore that no difficulty should be found in completing the Administration Report by the date now prescribed.

2. The gross debt of the Commissioners, exclusive of the advances made to them by the Government for the dock works at Kidderpore, was at the close of the year under review as follows:—

	Rs.
Consolidated debt due to Government	41,35,972
Port debt not repayable	17,65,000
4½ per cent. debenture loan of 1881	10,00,000
4½ ditto ditto of 1883	20,00,000
5½ ditto ditto of 1886	30,00,000
Total ...	1,19,00,972

The consolidated debt due to the Government was reduced during the year by Rs. 1,35,429, and a sum of Rs. 1,27,500 was invested by the Commissioners in their own debentures for the repayment of the debenture loans, making the total amount at credit of the sinking fund account Rs. 7,78,500.

3. Against the above debt, the assets of the Trust on the 31st March 1891, exclusive of the value of the river frontage lands which were made over to the Commissioners by the Government subject to a rent charge of Rs. 37,292 a year, amounted to Rs. 2,23,64,722. The statement below shows the cost of the works constructed or acquired by the Commissioners and the sources from which the expenditure has been met:—

Cost of work constructed or acquired by the Commissioners.	Rs.
Expenditure on jetties and appliances for sea-going vessels to the end of March 1891	83,54,172
Expenditure on inland vessels wharves, landing stages, tramway, &c., on the Calcutta bank of the river ..	62,02,698
Expenditure on inland vessels wharves, landing stages, tramway, &c., on the Howrah bank of the river ...	16,38,634
Expenditure on dry dock and premises at Howrah ..	5,25,484
Expenditure on moorings, anchor vessels, Harbour Masters' boats, light ships, survey vessels ...	38,01,745
Expenditure on Reserve Funds: Jetties R[illegible] ...	99,244
,, Insurance Fund ...	50,000
Port Reserve Fund	3,61,250
,, Depreciation Fund ...	1,99,995
,, Approaches Fund ...	1,50,000
Debenture loan, Sinking Fund	7,78,500
Dock Contingent Fund ...	2,00,000
Total ...	2,23,64,722

Sources from which the expenditure has been met.	Rs.
By loan from Government (repayable)	60,25,100
Do. ditto (not repayable)	17,65,000
Do. on 4½ per cent. debentures of 1881	10,00,000
Do. do. ditto of 1883	20,00,000
Do. 5½ ditto of 1886	30,00,000
Contribution from Government towards purchase of land for new riverside road	74,584
Ditto ditto for landing stage at Prinsep's Ghât	10,000
Ditto ditto for Port approaches block	7,19,203
From sale of surplus land	4,09,367
From revenue derived from works since formation of Trust	73,61,468
Total ...	2,23,64,722

4. The advances received by the Commissioners from the Government up to the close of the year under review on account of the dock works at Kidderpore amounted to Rs. 2,17,25,217, out of which sum Rs. 2,15,20,555 had been expended. But for the movement in the walls of Dock No. 1, which was referred to in paragraph 4 of the Resolution on the Administration Report

of the Commissioners for 1889-90, the docks would have been opened for traffic early in 1891. The injured walls are being repaired in accordance with the recommendations of the Committee appointed by the Government of India to consider the proposals made by the Engineer to the Port Trust; and as the report indicates that the subsidiary works are approaching completion, it may be expected that the docks will be ready for use at an early date.

5. The income of the year under Revenue account, exclusive of the opening balance [Rs. 3,78,647], amounted to Rs. 27,82,831 against Rs. 26,82,730 in 1889-90. The expenditure amounted to Rs. 28,20,135, including sinking fund charges (Rs. 2,30,534), contributions for new works (Rs. 66,228), and for dock contingent fund (Rs. 2,00,000). The year therefore closed with a net credit balance of Rs. 3,41,343.

6. Under Capital account the receipts amounted to Rs. 2,23,044, including an opening balance of Rs. 5,698. The expenditure amounted to Rs. 75,392, and the year therefore closed with a balance of Rs. 1,47,652.

7. During the year under review materials and stores to the value of £42,796-18-4 were procured by the Commissioners from England through their London Agent, and contracts to the value of Rs. 1,70,367-6-8 were entered into locally for the supply of miscellaneous stores.

8. The income under Part I, "Jetties," rose from Rs. 11,73,907 in 1889-90 to Rs. 12,38,673 during the past year, the Jetties, Petroleum Wharf, and the Tea Warehouse being the three departments which contributed to the increase. There was a considerable increase in the receipts from imports, but those from exports, although slightly in excess of the receipts of the previous year, were less than those of any of the seven years ending with 1888-89. The number of vessels berthed at the jetties was 215 against 203 in the previous year, and the average number of days each vessel occupied the jetties was 10·1 against 10 in 1889-90.

9. There was a falling off in the importation of petroleum. Forty-three vessels arrived during the year with 3,208,777 cases against 54 vessels with 3,726,670 cases in the previous year. This decrease is attributed to the fact that 1,078,009 cases were in stock at the commencement of the year. The returns show that the importation of Russian oil has been resumed, four vessels having arrived during the year from Batoum with 258,232 cases of petroleum. The income derived from the Petroleum Wharf amounted to Rs. 1,69,103, showing an increase of Rs. 10,163, which appears to have been due to the large balance of the previous year's imports which remained in store.

10 The question of placing restrictions on the transport of petroleum by water through the port, which was referred to in paragraph 11 of the Resolution on the Administration Report of the Commissioners for 1889-90, has not yet been finally determined. It has been decided, in consultation with the Commissioners, that petroleum should not be landed on the banks of the river within the limits of the port, and a draft rule on the subject has been published in the *Calcutta Gazette*, and will be dealt with further on receipt of any observations which those who are interested in the matter may have to make.

11. The quantity of tea brought down to Calcutta during the year was 105 million pounds against 101 million pounds in the previous year. The quantities that passed through the tea warehouse during these periods were 35 and 30 million pounds respectively. Notwithstanding this increase in the quantity that passed through the warehouse, the receipts came down from Rs. 58,913 in 1889-90 to Rs. 58,103 during the year under review. Owing to low prices that prevailed through the greater portion of the season, agents shipped their tea direct to London instead of offering it for sale in the local market. Thus a large quantity did not incur any charges for soldering, warehousing, &c., which it would have incurred had it passed through the local auctioneers' hands, and to this is attributed the falling off in the receipts. The total income of the tea warehouse, including the sum of Rs. 23,647 realised by letting out the ground floor, amounted to Rs. 81,750 against Rs. 76,455 in the previous year. The result on the whole was therefore satisfactory.

12. The income of the Jetties amounted to Rs. 12,38,673. Including payments in respect of interest and sinking fund of loans, the expenditure amounted to Rs. 8,37,500. The surplus revenue was therefore Rs. 4,01,173.

13. The income from the inland vessels wharves, which amounted to Rs. 4,94,021 against Rs. 4,67,292 in the previous year, was the largest on record since 1880-81. The expenditure, including payments for interest and sinking funds, amounted to Rs. 3,67,387, and there was a surplus revenue of Rs. 1,26,634.

14. The income of the Strand Bank lands was Rs. 1,74,978. The expenditure, including the rent charge payable to the Government, amounted to Rs. 87,882, leaving a surplus of Rs. 87,096.

15. There was an increase of Rs. 28,072 in the income of the Harbour Master's Department as compared with the figures of the previous year. This was due to an increase in the receipts from mooring hire and Harbour Masters' earnings, which amounted to Rs. 2,86,089 and Rs. 1,76,080, respectively, against Rs. 2,73,351 and Rs. 1,52,022, the figures of the previous year. The income of this part amounted to Rs. 5,70,365. Including interest and sinking fund charges, the expenditure was Rs. 4,78,505, leaving a surplus of Rs. 91,860.

16. Twelve vessels met with casualties while in charge of Assistant Harbour Masters against 9 in the year before. In three cases the officers were to blame and were punished under orders of the Commissioners.

17. The number of passenger and cargo boats surveyed during the year was 1,475 and 5,866, respectively, against 1,532 and 5,886 in the year before. The number of manjees licensed was 9,387 against 9,609, and the total amount realised was Rs. 30,603, including Rs. 7,859 on account of fines for breach of port rules against Rs. 29,731 in 1889-90.

18. The income from the Port Trust Railway amounted to Rs. 2,93,996, and the expenditure, including charges for interest and sinking funds, to Rs. 2,22,008, leaving a balance of Rs. 71,988.

19. The charges made by the Commissioners for the conveyance of goods by their tramway have been under consideration during the year, and they have recently submitted for sanction a schedule of rates prepared in accordance with the principles laid down by the Government of India.

20. The receipts of the Port Approaches amounted to Rs. 10,798. Including a provision of Rs. 1,00,000 on account of depreciation, the expenditure amounted to Rs. 5,60,625, which was met from the following sources:—

		Rs.
Contribution from Jetties	... ...	2,10,000
" " Inland Vessels Wharves	... ...	80,000
" " Strand Bank lands...	... ...	1,00,000
" " Harbour Master's Department...	...	90,000
" " Railway	... ...	70,000
Total	...	5,50,000

21. The river channels, with the exception of the Lower Saugor Roads and the Nynan and the Anchoring Creek Tracks, remained almost steady during the year. The Lower Saugor Roads deteriorated considerably, and the Nynan and the Anchoring Creek Tracks shoaled up in September and were abnormally low in October. Although there was a slight improvement during the remaining months of the year, they remained eight feet worse than the average for the time of the year. The deterioration of this channel formed the subject of a correspondence between this Government, the Government of India, and the Secretary of State, and an exhaustive enquiry was made into the matter. It does not seem possible to improve the bars by dredging operations, raking or training walls, and the suggestion in regard to lighting the Nynan channel so as to enable vessels to cross the bar at night cannot be adopted, as the movement of ships at night across the bar is believed to be impracticable.

22. The thanks of the Government are due to the Commissioners for their efficient management of the affairs of the Trust during the year.

By order of the Lieutenant-Governor of Bengal,

J. M. McNEILE, *Col.*, R.E.,

Secretary to the Government of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 7th November, 1891.

No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
BURDWAN DIVN.				
1	Burdwan	Nov. 7, '91	...	Report not received.
2	Bankoora	" 7, '91	0·69	Weather—cloudy towards the middle of the week with slight rain and wind. Rain has done much good to standing crops. Sowing of *rabi* continues. Harvesting of *aman* paddy going on. Fodder and water sufficient. No cattle-disease reported. Rice selling at 18 seers per rupee at Sudder and 15½ seers at Bishenpur.
3	Birbhum Rampore Haut	" 7, '91 ...	1·43 0·46	A cloudy week has ended with about an inch and-a-half of very useful rain. The crops have benefited much by it. The low land crops are good, and the high land crops are better though still bad. Fodder and water plentiful. Condition of cattle normal. Price of common rice steady at 16 to 18 seers per rupee.
4	Midnapur	" 7, '91	0·18	Weather—windy and cloudy with a little rain at the end of the week. Rain much wanted for *aman* rice, which is suffering except on very low lands. Sowing of *rabi* commenced. Outbreak of cattle-disease abated. Prices of common rice:— Srs. Sudder ... ... 16 } Contai ... ... 14 } per rupee. Ghatal ... ... 16 } Tumluk ... ... 15 }
5	Hooghly	" 7, '91	0·33	Weather—cloudy with drizzling rain. The rain which has fallen may do a little good to winter rice crop, which has greatly suffered from want of rain. A heavy fall of rain may yet do some good to this crop, but there are no signs of it. Water and fodder-supply sufficient. Prices of common rice:— Srs. Sudder ... ... 13 } Serampore ... ... 11¼ } per rupee. Jehanabad ... ... 14 }
6	Howrah Uluberia	" 7, '91 ...	0·29 0·36	Weather—unsettled during a part of the week. Prospects of *aman* crop less favourable. More rain wanted. Sugarcane satisfactory. Price of common rice 14 seers per rupee. Health of cattle good. Fodder and water-supply sufficient.
PRESIDENCY DIVN.				
7	24-Perghs.	" 10, '91	0·43	Weather—seasonable and of late cloudy with strong wind and drizzling rain. *Aman* on high lands withering for want of rain. There have been light showers, but not sufficient to do much good. Cultivation of *rabi* crops continues. Cattle-disease reported from two villages in thana Harowa. No deficiency of fodder or want of water. Price of common rice shows an upward tendency, being 11 to 15 seers per rupee.
8	Nuddea Meherpur Chuadanga Ranaghat	" 7, '91	1·30 Nil Nil 0·03	Weather—cloudy and stormy during the last three days; to-day (7th) clear and sunny. Rain has done some good to winter crops. Prospects of *aman* bad, the plants having been generally scorched. Common rice selling at 13 seers 7½ chittacks to 14 seers 8 chittacks per rupee. Condition of cattle good, and supply of fodder and water sufficient.
9	Khoolna Bagirhat Satkhira	" 7, '91	2·67 Nil 0·08	Weather—stormy. Recent rain said to have done good to *aman* crop. In some places, specially in Satkhira, more rain is wanted very much. Fodder and water for cattle sufficient. Price of common rice 14 seers per rupee.
10	Jessore Jhenidah	" 7, '91 ..	0·79 0·04	Weather—warm. *Chhotan* paddy and sugarcane are being harvested. *Aman* paddy and winter sowings badly want water.
11	Murshedabad	" 7, 91	1·06	Weather—now cool and fine. Rainfall during the week has done much good to winter rice. *Kalai* doing well. More rain wanted for *rabi* sowings. No want of fodder for cattle.
CHITTAGONG DIVN.				
12	Chittagong	" 10, '91	1·20	Prospects of standing crops not very good, but improved by the rain. Cultivation of vegetable crops going on. Prices have somewhat risen.
13	Noakhally	" 7, 91	0·49	First three days close and hot, last four days cloudy, and yesterday (6th) cyclonic weather. State of *aman* worse. Much more rain wanted. Preparation of soil for *rabi* crops continues. Prices of rice stationary. Condition of cattle and supply of fodder and water good.
14	Tipperah	" 7, '91	3·92	Weather—cloudy and cold. Prospects of crops not favourable in parts of the district. Recent rain will improve the state of the crops. Fodder sufficient. Cattle-disease prevails in parts of the Chandpur subdivision.
15	Chittagong Hill Tracts.	" 5, '91	0·11	Weather—foggy in the morning and hot at noon. Cloudy on the 3rd, 4th, and 5th instant. Harvesting of *jum* paddy over. Gathering of cotton commenced. Late rice crop in low lands suffering from want of rain. Lands are being ploughed for mustard and other cold-weather crops. Common rice being sold at 13 seers 5 chittacks per rupee.

No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*				
DACCA DIVN.				
16	Dacca	Nov. 7, '91	0·99	Weather—first part of the week fine and the latter part cloudy. Prospect of *aman* good generally, but this crop has suffered partly for want of rain. Recent rain has done much good. *Asvini* paddy still being cut. Fodder available. Common rice selling at from 13 to 17 seers per rupee. No cattle-disease.
17	Furreedpur	„ 7, '91	1·08	Weather—cloudy with a high north-easterly wind and rain. Prospect of *aman* paddy on low lands fair. Rain has done some good to winter crops already sown. Price of rice stationary. No cattle-disease. Fodder available.
18	Backergunge	„ 7, '91	1·29	Edge of cyclone with sharp showers from south-east, now apparently passed over. The late rain has done some good to the crops, and the prospect is not so gloomy as before. Price of common rice varies from 12 to 18 seers a rupee. Fodder and water sufficient.
19	Mymensingh	„ 7, '91	1·82	Rain commenced to fall from 5th instant. Prospects of crops fair. Condition of cattle good. Supply of water and fodder sufficient. Coarse rice selling at 14½ seers per rupee.
RAJSHAHYE DIVN.				
20	Dinagepur	„ 7, '91	Nil	Weather—seasonable. Prospects of winter rice bad. Cultivation of *rabi* crops still going on. Sugarcane promises well. Price of rice has fallen at Sudder, where common rice is selling at 13 seers per rupee. At Thakurgaon price of rice stationary. Condition of cattle reported to be good. Supply of fodder and drinking water ample.
	Thakurgaon	...	Nil	
21	Rajshahye	„ 7, '91	0·31	Cold weather has set in, after two days' rain this week. *Aman* crop has greatly suffered, and will be very short owing to the late drought. The week's rain will facilitate *rabi* cultivation. Price of common rice ranges from 12 to 14 seers per rupee. Cattle-disease nowhere reported. Fodder and drinking water ample.
	Nattore	...	0·42	
22	Rungpur	„ 7, '91	0·09	Weather—bright with north wind. Paddy in ear and prospects unchanged. Mustard being largely sown and germinating well. Potatoes and tobacco doing well. Price of rice stationary at 12 seers per rupee except at Nilphamari, where it is selling at 10 seers. Fodder plentiful.
	Gaibanda	...	Nil	
	Kurigram	...	Nil	
	Nilphamari	...	Nil	
23	Bogra	„ 7, '91	0·05	Weather—cool with light north-east breeze. Recent rain will greatly improve prosepects of low land *aman*, from which a 12 to 14-anna outturn may now be expected. Common rice selling at 14 seers per rupee. Fodder ample. Lands still being prepared for *rabi* crops; prospects of these favourable.
	Sherpur	...	Nil	
	Nowkhilla	...	0·71	
24	Pubna	„ 7, '91	0·87	Weather—seasonable. Rainy at close of the week. State of standing crops much improved by recent rain. More rain wanted for the filling in of the ear of *aman* paddy. *Rabi* crops doing well. Condition of cattle good; supply of fodder and water ample. Common rice selling at 13 seers per rupee both at Pubna and Serajgunge.
25	Darjeeling	„ 7, '91	Nil	Weather—fair. Sowing of *rabi* crops nearly completed. From want of water in the fields it is not expected that paddy will yield more than 9 or 10 annas. No disease among cattle reported. Fodder and water-supply sufficient. Prices of common rice:— Srs. Silliguri ... 11; Darjeeling ... 10; Kalimpong ... 10; Pulbazar ... 11; Nagri ... 8; Sonadah ... 11; Kurseong ... 10; Nuxalbari ... 13; Joro Bungalow ... 10 — per rupee.
26	Julpigoree	„ 7, '91	Nil	Weather—cloudy and cool with high easterly wind at the latter part of the week. *Haimanti* paddy badly in want of rain. Common rice sells at 10 seers per rupee. Fodder and water-supply sufficient. No cattle-disease.
BEHAR,				
BHAGULPORE DIVN.				
27	Monghyr	„ 7, '91	Nil	Weather—sky overclouded, air cooler. Winter rice mostly withered except in Kharakpoor. *Rabi* sowings going on. Rain much wanted. Fodder sufficient and no cattle-disease. Price of rice from 11 to 15 seers per rupee.
	Beguserai	...	0·05	
	Jamui	..	0·10	
28	Bhagulpur	„ 7, '91	0·01	Weather—warm for the time of year. There were clouds about on 5th, but no rain to speak of. Prospects of *aghani* rice continue to be generally unfavourable, and scarcity may be expected in the north of the district. Prospects of *rabi* crops are better, though more rain is required for these also. Fodder sufficient. Price of common rice 13 seers 14 chittacks per rupee.
29	Purneah	„ 7, '91	Nil	Weather—cloudy and close till yesterday (6th), but clouds have now cleared away and with them the prospect of rain. Paddy on high lands withering and in some places being grazed down. On the low lands it is coming into ear, but prospects are unfavourable. *Rabi* sowings continue, but the moisture in the land in the Sudder subdivision is deficient. Tobacco being sown in some places and planted out in others. Common rice selling at 10 to 12 seers per rupee in Kishengunge, at 14 seers in Arrareah, and at 11 to 12 seers in Sudder subdivision. Fodder and water-supply at present sufficient. No cattle-disease reported.
	Kishengunge	...	Nil	
	Arrareah	...	Nil	
30	Maldah	„ 7, '91	0·26	Weather—getting cooler. Light showers in some parts of the district, but not enough to do any real good to the winter rice which is coming into ear. Sowing of mustard continues. Fodder for cattle and drinking water sufficient. No cattle-disease. Common rice sells at from 11 to 17 seers per rupee.
	Chanchal	...	0·02	
	Shibgunge	...	0·23	
31	Sonthal Perghs.	„ 7, '91	0·86	Weather—cloudy. A light shower on 5th. This will greatly benefit both rice and *rabi*. About half the paddy on high lands is dead, but that on low lands continues good. In Deoghur subdivision paddy harvest not expected to be more than 8 annas, but taking the district as a whole, the outturn will be from 10 to 12 annas. Water and fodder-supply sufficient. Price of common rice 15 seers per rupee.

Division	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR—(concld.)					
Patna Division.	32	Patna	Nov. 7, '91	Nil	Weather—hot, but cool at night. Paddy suffering from drought. Dried up plants being cut for fodder. Irrigated paddy in ear. *Rabi* and poppy sowings in progress, but prospects gloomy for want of rain. Prices generally stationary except in Barh subdivision, where they are reported to be slightly rising.
		Barh	...	0·06	
		Behar	...	Nil	
		Dinapore	...	Nil	
		Hilsa	...	0·41	
	33	Gya	" 7, '91	Nil	Weather—getting cold; occasionally cloudy. Sowing of *rabi* going on slowly. Rain much wanted. Prices of food-grains almost stationary. Supply of fodder and water for cattle yet sufficient.
	34	Shahabad	" 7, '91	Nil	Weather—generally cooler than last week with light winds. Want of rain continues to be severely felt. *Rabi* crops, however, thriving in spite of its absence. Want of water for irrigation and drinking is already being felt in the west of the district. Prices rising steadily.
		Buxar	...	Nil	
		Bhabuah	...	Nil	
		Sasseram	...	Nil	
	35	Durbhunga	" 7, '91	Nil	Weather—occasionally cloudy with east wind. Paddy on high lands will be a complete failure. Prospects of low land rice are far from favourable. *Rabi* sowings still going on, but there is very little moisture in the land. Fodder for cattle plentiful. Prices rising steadily.
	36	Mozufferpur	" 7, '91	Nil	Weather—hot and at times cloudy. Slight rain fell in a few places in the south-east of the district. Prospects of rice crop bad. It is withering on higher lands, and outturn for whole district will probably not exceed 6 annas. *Rabi* has not germinated well, and unless there be rain soon, it will also be a very poor crop. Price of rice at Sudder 14 seers, at Sitamarhi 13 seers, and at Hajipur 16 seers per rupee. Condition of cattle good. Fodder and water sufficient.
		Hajipur	...	Nil	
		Sitamarhi	...	Nil	
	37	Sarun	" 7, '91	Nil	Weather—fine; cold at nights. Rather cloudy the last two days. Rain much wanted. *Rabi* sowings still going on, but require rain. Fodder and water for cattle sufficient. Common rice selling at 13 seers per rupee at Sudder.
	38	Chumparun	" 7, '91	Nil	Weather—seasonable. *Rabi* crops are being sown. Rice is being irrigated. Supply of fodder and water for cattle sufficient.
ORISSA.					
Orissa Divn.	39	Cuttack	" 7, '91	4·87	Weather—cool. After prolonged drought a cyclonic storm with high wind and heavy rain visited the district on 4th and 5th. Considerable damage resulted. Full report not yet to hand. Common rice sells at 14 seers 7 chittacks per rupee. Fodder-supply sufficient.
	40	Pooree	" 6, '91	13·61	A violent storm has just passed over the district, causing serious damage to houses and trees. Reports of its effects on the crops not received. Common rice sells at from 14 seers 6 chittacks to 21 seers per rupee. Cattle-disease reported from some parts of the district.
	41	Balasore	" 7, '91	2·47	Weather has been stormy; at present fair. Careful enquiries prove that damage from October drought did not exceed 3 annas. If all goes well there should be an average outturn of not less than 12½ annas of winter rice. Rice sells at Balasore 19 seers and at Bhadrak 20 seers per rupee.
CHOTA NAGPORE					
South-West Frontier Agency.					
Chota Nagpore Divn.	42	Hazaribagh	Nov. 7, '91	0·07	Weather—seasonable and at intervals cloudy. Paddy being harvested; outturn will be 4 annas less for want of October rains. *Rabi* sowings continue in some parts, but retarded in others for want of rain. Common rice selling at 15 seers per rupee. Water and fodder-supply sufficient.
		Giridih	...	Nil	
	43	Lohardugga	" 7, '91	0·17	Weather—getting cold. The little rainfall has done much benefit to paddy. More rain wanted for this crop and for sowing *rabi*. Price of common rice. 15 seers per rupee. Ample fodder for cattle.
		Palamow (up to 2nd)	...	Nil	
	44	Singbhoom	" 7, '91	0·48	Weather—cloudy and rainy on the 5th and 6th; clear now. Prospects of rice crop satisfactory everywhere, full outturn being reaped. Prices lower.
	45	Manbhoom	" 7, '91	0·43	Weather—seasonable. Rain has improved prospects of rice crop. Fodder and water-supply sufficient.
		Govindpore	...	0·25

STATISTICAL DEPARTMENT,
The 7th November, 1891.

C. E. BUCKLAND,
Offg. Secy. to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of October 1891.

		Date.	Hour
	Inches.		
The mean pressure of the month	29·886		
The average pressure of October from 24 years' registers ...	29·832		
The highest pressure in the month	30·089	31st	10
The lowest pressure in the month	29·750	22nd	16
The range of pressure	0·339		
	Hours.		
The total number of hours of bright sunshine during the month	277·9		
The maximum possible number of hours of sunshine ...	359·1		
	°		
The mean temperature of the month	80·0		
The average temperature of October from 24 years' registers	81·5		
The highest temperature in the month	90·2	6th	
The lowest temperature in the month	67·7	28th	
The range of temperature during the month	22·5		
The mean daily range of temperature	14·1		
The greatest range of temperature in one day	19·9	28th	
	Per cent.		
The mean humidity of the month	79		
The average humidity of October from 24 years' registers ...	79		
	Inches.		
The mean vapour tension of the month	0·806		
The average vapour tension of October from 9 years' registers	0·854		
The mean cloud proportion of the month	2·02		
The average cloud proportion of October from 14 years' registers	3·99		
The total rainfall of the month	0·10		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	0·10		
The average fall of October from 48 years' registers ...	5·61		
The greatest fall in 24 hours	0·10	6th	
	Days.		
The number of rainy days in the month	1		
The average number of rainy days in October from 24 years' registers	10		
	°		
The mean maximum equilibrium temperature of solar radiation during the month	144·1		
The mean difference of sun and air temperatures	56·9		
The greatest sun temperature	148·7	5th	
The greatest excess of sun over air temperature	63·0	22nd	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	68·0		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	5·2		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	7·7	28th	
	Miles.		
The mean movement of the wind per day	69·2		
The greatest movement of the wind in one day	168·0	4th	
The greatest movement of the wind in one hour	14·0	4th, 11 to noon.	

The number of hours with winds from each of the 8 points—

N. 172, N.E. 39, E. 44, S.E. 12, S. 41, S.W. 142, W. 97, N.W. 88, Calm 109.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park Street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·8° lower; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

C. LITTLE,

For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 9th November 1891.

Meteorological Report of the Province of

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF OCTOBER 1891.

THE most noticeable features in the meteorology of October in Bengal have been—

1. The unusually early cessation of the monsoon current in Bengal, the rainfall due to this current practically ceasing on October 5th instead of in the middle of October as usually happens.

2. The consequent extreme lightness of the rainfall in all districts, the average falls in the large meteorological divisions ranging only from 2·02 inches in North Bengal to 0·53 inch in Chutia Nagpur. Expressed as a percentage of the normal fall for the month, the actual amounts received have varied from 46 per cent. in North Bengal and 45 per cent. in South Behar to 21 per cent. in Orissa, 18 per cent. in Chutia Nagpur, and 17 per cent. in South-West Bengal.

3. There was also an unusual absence of cyclonic storms or even of barometric depressions such as are generally formed in this month, and beyond a depression of only moderate dimensions which formed in the south-west of the Bay towards the close of the month and which passed across the south of the peninsula, there was no storm or even disturbed weather of any kind.

4. With the unusually early cessation of the rains and the absence of disturbed weather, both the average humidity and cloud proportion have been decidedly in defect of the normal in all districts for the month.

5. Winds have also been more northerly, and the northerly winds have been stronger than is usually the case in October.

6. With the setting in of the cool northerly current earlier than usual, the mean temperature of the province has been distinctly in defect of the normal, the defects being largest in the north and east of the province.

7. Pressure has also been unusually high almost throughout the month and considerably in excess of the normal for the period. This high pressure has accompanied the unusually early establishment of the conditions which obtain at the commencement of the north-east monsoon season.

Meteorology of the month.—At the close of September a barometric depression had passed from the northern part of the Bay in a west-north-westerly direction into Central India, after which it moved towards the north-east to Allahabad, in the neighbourhood of which it filled up about the 2nd or 3rd of October after remaining almost stationary for several days. At the commencement of October, therefore, ordinary south-west monsoon winds were blowing over Bengal towards the depression. They gave little or no rain to the province on the 1st of the month, but when the storm began to disappear and the residual feeble low-pressure area began to move eastwards, then rainfall became more general, and from the 2nd to the 5th or 6th rainfall was rather frequent over the greater part of the province. The south-west monsoon current from the Bay then seems to have ceased to flow over Bengal; wind directions became west and north-west over the western half of the province, and north and north-east over the eastern half. Pressure also on the 6th became higher in the west and north-west of the province than it was at the southern stations. The sky quickly cleared and became almost cloudless, while humidity rapidly fell. Rainfall on the 6th had almost entirely ceased, and fine settled weather prevailed over the whole province. Thus from about the 6th the general conditions in Bengal became those which mark the transition period between the south-west monsoon on the one side and the north-east monsoon or cold weather on the other. This change was at least a week earlier than usual, and the rainfall thus ceased at least a week earlier than the normal. The change from the south-west monsoon conditions also took place very rapidly, and the period of almost calm weather which generally precedes the commencement of the light northerly wind current over Bengal was unusually short.

During the following week the pressure distribution became even more favourable for the continuance of northerly winds and clear dry weather in Bengal, as the readings of the barometer were lowest in the south of Madras and gradually increased to the foot of the Himalayas. Also pressure was slightly below the normal in the south of the province, while the readings were more than a tenth of an inch in excess in Behar. With the continuance of these conditions fine clear weather with an almost entire absence of rain therefore continued in the province up till about the 20th of the month.

In the south of the Bay, however, the comparatively low pressure previously noticed gradually developed and concentrated off the Madras coast, until it formed a distinct barometric depression about the 20th, which remained practically stationary up till this date. On the 21st and 22nd it commenced to pass in an easterly direction, the centre apparently crossing the coast on the 22nd near Cuddalore, for on the 23rd it was partly across the coast and on the 24th it was practically inland, but the depression was only a feeble one, and it only gave squally weather in the south and south-west of the Bay. Squally unsettled weather, probably due to a small local storm, was also reported on the 23rd from Akyab.

Conditions in Bengal therefore again changed from the 20th, for the depression in the Bay influenced the weather in the southern districts, that is, in Lower Bengal and Orissa, giving cloudy skies, a humid atmosphere and local showers, and on the 21st and 22nd numerous showers were reported in the districts indicated. On the 25th the depression was well

inland, so that from this day the weather conditions began to improve in the Bay, and with the disappearance of the disturbance the weather in Bengal also became more settled and more of the ordinary cold season type. On the 25th pressure, however, continued to fall slowly to moderately in Bengal, and it was decidedly in defect of the normal. The moist air current which had been forced northwards from the Bay by the depression still gave a rather high humidity generally in Bengal, while the sky also remained cloudy. Light and variable winds also obtained, and light local showers were reported in some of the districts of Behar and North Bengal. On the 26th pressure commenced to increase slowly, but otherwise conditions had not altered to any material extent, except that the sky had begun to clear, though again on this day a few light local showers were reported. On the 27th pressure had risen briskly, though there was a very shallow low-pressure area in the centre of the province, and temperature commenced to fall moderately to rapidly, but winds continued very light. Humidity decreased in Behar, while the sky became almost cloudless. Practically no rain was reported on this day. On the 28th the barometer fell in the west of the province and rose elsewhere, and the distribution of pressure became very uniform. Winds continued a little variable, but they were becoming generally northerly though light in force. On this day also there was practically no rain On the 29th pressure rose in the west and north of the province and fell elsewhere, and the general pressure was considerably in excess of the normal. The northerly element in the wind directions strengthened, but cloud portion and humidity also increased, particularly at the western stations, and again local showers commenced in Chutia Nagpur, Behar, and North Bengal. On the 30th pressure fell slowly at the south-eastern stations, while it increased moderately elsewhere, and the distribution of pressure became fairly normal for the cold weather. Temperature also fell rapidly and became almost normal, while humidity and cloud proportion decreased, though there were still local showers reported in Behar and parts of South-West Bengal On the 31st pressure rose rapidly, and the general distribution almost resembled that of the middle of the cold weather. Temperature fell moderately and became generally below the normal, while a steady and fairly strong northerly current was blowing over the whole province. The local rain showers also practically ceased, and ordinary north-east monsoon weather thus obtained at the close of the month.

In the Bay conditions call practically for no remarks up till nearly the close of the month when a barometric depression began to form to the south last of the centre of the Bay, but up till the 31st it had not concentrated to any extent to form a storm, and probably then only existed as a diffused low-pressure area with squally weather over the southern part of the Bay up to perhaps lat. 10° or 12° N. This depression afterwards, however, rapidly developed into a storm, and finally into a cyclone which subsequently travelled to the north-west angle of the Bay, but the history of this cyclone belongs to the meteorology of November.

Pressure.—At the commencement of the month the mean pressure was nearly normal, but when the retreat of the monsoon current began it became above the normal, the excess ranging up to about a tenth of an inch. Pressure then oscillated slightly, the tendency being for pressure to fall, and by about the middle of the month the excess equalled about a twentieth of an inch only. With the occurrence of the disturbed weather in the Bay pressure conditions began to change, and in the week ending the 24th for the first few days pressure was in excess, and for the second half of the week it was in defect of the normal. With the disappearance of the depression from the Bay, pressure again became above the normal, and for the last week in the month the excess in the mean pressure ranged from 0.03" to 0·06", the excess on the whole being largest in South-East Bengal and smallest in Assam and Chutia Nagpur. The mean pressure for the whole month has therefore been very decidedly in excess of the normal, the excess usually ranging between 0·04" and 0·06". The largest excess was registered at Gopalpore, where it equalled 0·080", and the smallest at Darjeeling, where it was only 0·002". In Assam the excess pressure ranged from 0·005" at Dhubri to 0·040" at Silchar.

Temperature.—The variations of temperature during the month have not been very important. At the begining of the month the mean temperature was very nearly normal. For the period 4th to the 10th temperature became very decidedly (about 1° to 2°) below the normal in all districts except Orissa and Chutia Nagpur, and this defect continued in the week ending the 17th and for the following week, except that the defects had become smaller. These conditions had been to a great extent removed in the last week, and there was a general excess of about half a degree except in Assam and East Bengal, where there was a decided defect. The mean temperature for the whole month was below the normal in all divisions except South Behar, where the very small excess of 0·1° was recorded. The defect has equalled about a degree in East and North Bengal and North Behar, and about half a degree in Orissa, but the defects were very small in South-West Bengal and Chutia Nagpur. The mean temperature for the whole province may be said to have been 0·6° below the normal. In Assam the defect has been 1·4°.

Rainfall.—The periods of rainfall have already been described, and it will be seen that they have been very brief. The largest average fall in any division has only equalled 2·02 inches in North Bengal, where the ordinary fall in October is nearly four and-a-half inches. East Bengal has received 1·73 inches, against a normal fall of five and-a-half inches. In South Behar the fall has equalled 1·50 inches, against the normal 3·30 inches, and in North Behar there was a fall of 1·37 inches, while the ordinary amount received exceeds three and-a-half inches. In Orissa the fall has been 1·31 inches, against the normal of 6·16 inches.

In South-West Bengal the fall has averaged less than three-quarters of an inch, being only 0·73 inch, while in normal years nearly four and-a-half inches fall. Finally, in Chutia Nagpur the actual fall has only averaged the very small amount of about half an inch, against the normal amount of nearly three inches, and it will thus be seen that the whole province has received a fall very largely in defect. Expressed as a percentage of the normal rainfall, North Bengal and South Behar have received from 45 to 46 per cent. of the usual amount, East Bengal and North Behar from 30 to 40 per cent., and South-West Bengal, Chutia Nagpur, and Orissa from 17 to 21 per cent. Taking all these divisions as having an equal value in the calculation, the rainfall for the whole of Bengal for October may be said to have equalled 31 per cent. of the normal.

The following table gives a comparison between the actual monthly and total rainfall and the normal rainfall of the province up to the end of October in the same form as has been employed in the previous monthly abstracts of the present year. The figures represent the ratio of the rainfall of each month of the present year to the normal rainfall expressed as a percentage. The table thus gives a condensed summary of the rainfal data of the year for each meteorological division. The first ten columns give the percentage amount of rainfall received in each month, and the last column the percentage rainfall of the whole period from the 1st of January to the end of October. It will be seen that for the period of ten months, notwithstanding the very light monsoon of the present year, Orissa has received a fall in excess of the normal, while the defects elsewhere do not represent more than from 6 per cent of the normal in Chutia Nagpur to 24 per cent. of the normal in North Bengal:—

Meteorological Divisions.	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	Actual rainfall of first ten months of 1891 expressed as a percentage of the normal fall for the period.
Orissa	11	167	424	:6	134	28	74	139	180	21	105
South-West Bengal...	53	193	308	60	170	61	94	81	71	17	89
East Bengal ...	2	311	98	130	151	71	100	65	61	32	85
North Bengal ...	78	377	239	77	140	53	117	46	37	46	76
North Behar ...	171	233	590	19	172	94	83	65	35	39	79
South Behar ...	253	159	734	30	165	83	85	83	56	45	89
Chutia Nagpur ...	163	91	506	30	148	47	97	93	102	18	94

The following table gives full data for the comparison of the actual and normal rainfall of the month of October in all districts of the province. The figures are obtained in the manner explained in previous monthly summaries. The first column gives the average district rainfall as determined from the rainfall observations of the past 15 years. The second column gives the actual district rainfall as determined from the actual weighted rainfall of the month at the reporting stations in the district. The third column expresses the ratio of the actual district rainfall to the normal as a percentage, and the fourth the same information in a slightly different form:—

Percentage Table for October 1891.

Division.	District.	Normal district rainfall for October.	Actual district rainfall for October 1891.	Percentage of actual to normal rainfall.	Percentage excess (+), defect (−).
Orissa ...	Pooree	7·42	1·91	26	— 74

Percentage Table for October 1891—concld.

Division.	District.	Normal district rainfall for October.	Actual district rainfall for October 1891.	Percentage of actual to normal rainfall.	Percentage excess (+), defect (−).
North Bengal ...	Pubna	4·43	2·28	61	— 49
	Bogra	4·34	1·80	41	— 59
	Rajshahye	4·53	1·90	42	— 58
	Maldah	3·62	0·99	27	— 73
	Dinagepore	3·44	1·14	33	— 67
	Rungpore	4·46	5·47	123	+ 23
	Cooch Behar	4·99	1·28	26	— 74
	Julpigoree	5·60	1·48	26	— 74
	Darjeeling	6·96	0·88	13	— 87
North Behar ...	Purneah	3·43	0·84	24	— 76
	North Bhagulpore	3·36	1·30	38	— 62
	Durbhunga	2·72	1·05	39	— 61
	Mozufferpore	3·03	1·06	35	— 65
	Chumparun	3·46	3·64	105	+ 5
	Sarun	3·74	0·89	24	— 76
South Behar ...	Shahabad	3·19	0·83	26	— 74
	Gya	2·58	1·12	43	— 57
	Patna	2·97	0·81	27	— 73
	Monghyr	3·13	1·61	51	— 49
	South Bhagulpore	3·64	0·46	13	— 87
	Sonthal Pergunnahs	3·62	2·24	62	— 38
Chutia Nagpur ...	Hazaribagh	3·26	0·30	9	— 91
	Lohardugga	2·47	0·32	13	— 87
	Singbhoom	2·94	1·32	45	— 55
	Manbhoom	3·68	0·28	8	— 92

It will thus be seen that even in the midst of the very large defective fall which has been generally received, two districts have received more than the normal amounts in October, Rungpore having actually reported 23 per cent. in excess and Chumparum 5 per cent. in excess. On the other hand, districts like Howrah, Hooghly, and 24-Pergunnahs have received falls only equal to 2 per cent. of the normal, while falls of less than 10 per cent. are reported in Midnapore, Burdwan, Khoolna, Hazaribagh and Manbhoom districts.

In Assam during the month, Sibsagar has received 4·48 inches, Silchar 4·21 inches, and Dhubri 1·20 inches of rain.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the month of October 1891:—

Meteorological Divisions.	Temperature.						Rainfall.							
	Highest observed during month.	Lowest observed during month.	Averages for month.			Average mean of month above or below normal mean of month.	Of month.			Rainy days.			Since 16th Oct. 1891.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

...r the week ending Saturday, the 7th of November 1891.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	District observations. Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 16th October 1891. Mean for district.	Since 16th October 1891. Normal mean.	Since 16th October 1891. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—..... indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy day is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 10*th November* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 7TH OF NOVEMBER 1891.

IN the report for the week ending 31st October, it was stated that squally weather had formed in the south of the Bay, but that, though the disturbed weather existed as far north as about 11° N. Lat., there was nothing to show that the conditions were developing or had formed any definite storm. On Sunday, the 1st of November, the changes which took place at the coast stations round the Bay were small. Pressure was falling very slowly only over the whole Bay; light to moderate north-easterly winds were blowing at the stations on the east coast and north-westerly winds generally at the western stations, while moderate to heavy rain was falling along the Madras Coast from Cuddalore southwards. Though the coast stations in no way showed the formation of a barometric depression, it is probable that one was forming, or even had formed, on this day close to the Andaman Islands. It was probably not of much intensity when the meteorological observations were taken on this morning, though it must have developed rapidly during the day, for reports received from Port Blair in the Andamans seem to show that a rather severe cyclone passed over that station during Sunday night, the 1st instant, and on Monday morning the 2nd instant. The wind directions reported from that station indicate that the centre of the storm passed over it between 2 and 3 A.M. of the 2nd, when there was a lull in the storm for about 40 minutes, while the total duration of the storm was about 7 hours. Even at this period it was a very violent storm, and caused much destruction of life and property. As, however, the Andaman Islands are not connected by telegraph with the main land, no information was available from Port Blair as to the formation of the storm. On the morning of the 2nd November the meteorological observations taken at the coast stations round the Bay showed the existence of bad weather. There had been a general, but only moderate, fall of pressure all round the Bay, which was largest at Diamond Island and in the south of the peninsula, and winds at Diamond Island which had previously been N. N. E. and of light force, at 8 A.M. of the 2nd had become E. N. E. and were strong in force. So far as can be ascertained from the observations at the coast stations in the absence of the Port Blair information, the centre of the storm was to the south-west or west-south-west of Diamond Island, or to the west or west-north-west of the Andamans, on the morning of the 2nd, but probably a long distance (perhaps 300 miles) from land. The observations at the coast stations on this day did not point to the storm being more than of moderate intensity. On the 3rd the storm had distinctly moved in a north-westerly direction, and its centre was probably in the latitude of Nellore in about 14° N. Lat. and 87° E. Long. and still at a long distance from land. From the 2nd to the 3rd the storm does not appear to have increased in intensity as judged by the observations taken at the coast stations, for though fairly strong winds were blowing at some of the west coast stations, yet in the rear of the storm winds had rapidly decreased in force, and moderate winds only were blowing at Diamond Island, the velocity having decreased from 13 miles an hour reported on the morning of the 2nd to 9 miles reported on the morning of the 3rd instant. From the 3rd to the 4th, however, the storm very rapidly increased in intensity and became a distinct and rather violent cyclone, and wind velocity at Diamond Island on this day showed the increase in intensity of the storm by rising up to 18 miles an hour. The cyclone had also again advanced in a north-westerly direction, and its centre at 8 A.M. of the 4th was probably opposite Vizagapatam, or to the south-east of Gopalpur, and about perhaps 200 miles from land. The storm centre apparently reached the land near Gopalpur on the early morning of the 5th, for the meteorological observer at that station reported that the centre of a cyclone passed over that station between 2 and 5 A.M. of the 5th. At this time the cyclone appears to have altered the direction of its advance, and to have taken up a northerly direction. It then advanced slowly either close to the coast of Orissa or a short distance inland, passing near Pooree, and the meteorological observer at Pooree has reported that that station was visited by a heavy cyclone from 10-25 P.M. of the 4th to 1-30 P.M. of the 5th, receiving the very heavy rainfall of 13·61 inches, and that during the storm house property was seriously damaged and some lives were lost. The telegram, however, does not state that the calm centre passed over the station, and it is probable from the observations received from Cuttack that the centre passed between Pooree and Cuttack, for about 1 P.M. of the 5th the centre of the storm was to the east of Cuttack, though probably some distance away. The precise line of advance of the storm through Orissa is at present difficult to determine, for early in the storm the telegraph wires to Pooree and False Point were carried away, and no observations have since been received from those stations. The direction of the advance of the storm must, however, have again changed at this time, and the storm evidently commenced to recurve towards the north-east. The centre was to the south of Balasore between 8 and 11 P.M. of the 5th, but at some distance from it, and it passed to the south of Saugor Island about 2 A.M. of the 6th, also at some distance from the land, and at 8 A.M. it was to the south-east of that station. The centre passed about 80 to 120 miles to the south-east of Calcutta about noon of the 6th, and afterwards a little to the north of Burrisal between 5 and 8 P.M. of the same day, but the rapidity of the north-easterly advance of the storm had at this time greatly increased, and by the morning of the 7th the storm had left Bengal altogether, and was probably in Sylhet or Cachar. It had also rapidly decreased in intensity, and on this

day was of little importance. On the 7th any residual low pressure due to the disintegrated storm was probably in Upper Assam or Upper Burma, but the storm had then practically ceased to exist.

The lowest pressure during the passage of the storm of which any record has yet been received from any of the meteorological observatories was 29·39″ at Gopalpur at 2 A.M. of the 5th; but the barometric reading during the passage of the calm centre was not given by the observer. Telegraphic communication with False Point and Pooree also failed rather early during the storm, so that no barometric records are available for these stations, but it is probable that much lower pressures than that above recorded actually existed in and near the centre of the storm, for observations made on some of the vessels in the north-west angle of the Bay which were involved in the storm, particularly on board the ship *Lena*, appear to show that a pressure of about 28 inches or even 27·9 inches was experienced.

The cyclone was of course accompanied by a very complete cyclonic circulation of winds, apparently even from its formation close to the Andamans, and the storm, though by no means so large and so fierce as many cyclones have been, was attended by extremely fierce and destructive winds. The highest recorded wind velocity shown in the observations as yet received from the meteorological observatories was the average velocity of 59 miles an hour at Pooree, just before the time when the telegraphic communication with that station ceased during the night of the 4th. Judging, however, by the fact that this was only the average hourly velocity for 3 hours, and that this occurred before the full force of the storm reached the station, it is probable that in the squalls and close to the calm centre the velocity of the wind must have run up to at least 80 or 90 or even 100 miles an hour. The strength of the wind is also shown by the number of vessels in the north-west angle of the Bay which were dismasted by the force of the cyclone, and by the damage done in the Andamans at a time when the cyclone could not have attained its full force.

The storm has brought up rain to all the districts through which it passed, but on the whole the rainfall has been smaller in amount than is usual in large and fierce cyclones. Orissa has received a very heavy rainfall, and one station, Pooree, has reported 13·61 inches during the storm, while Kendrapara received about 15·7 inches, and so on; but the falls were much smaller in South Bengal than in Orissa, and in Sylhet and Assam the falls had become very light. With the approach of the storm into the north-west of the Bay, the weather conditions in Bengal at once completely changed. Fine settled weather of north east monsoon character had obtained at the commencement of the week, but from the morning of the 3rd the sky rapidly clouded in the southern districts till it became almost overcast over the whole province, and from the morning of the 4th light rain commenced in Orissa. The rainfall was heavy over the whole of Orissa on the 5th and 6th, and on the latter date rather heavy rain commenced in South Bengal, and moderate rain continued to fall on the 6th and 7th in East Bengal and over the southern districts of North Bengal. Chutia Nagpur and the Sonthal Pergunnahs districts in South Behar also received light to moderate rain on the 5th and 6th instant. It will thus be seen that the weather conditions in Bengal during the week have been entirely controlled by the advance of the cyclone towards the province, and by its subsequent passage through the southern half of it, and one of the beneficial effects of the storm has been to give rain to all districts except Behar and part of North Bengal.

Pressure.—The variations of pressure during the week need not be discussed in detail, for from almost the commencement of the week the general distribution and the variations of pressure have been governed by the cyclone which has just been described. Pressure was high at the commencement of the week, and then fell steadily up to the 7th, a fall of nearly half an inch occurring in the first four or five days at some of the southern stations, though in the north of the province the barometer was less affected. The mean pressure has consequently been in defect of the normal for the week, the defect at such stations as Gopalpur, Cuttack, and Saugor Island equalling about 0·05″, while in the north of the province pressure has been above the normal by about 0·02″ or 0·03″.

Temperature.—In front of the advancing storm, temperature, as usual, increased considerably, and damp, warm, muggy weather generally prevailed in Bengal. The mean temperature of the province for the week has therefore been in excess of the normal in all districts except Orissa and South-West Bengal, where, owing to the fall of temperature at the end of the week, due to the heavy rainfall, very slight defects have been registered. In South Behar and Chutia Nagpur, excess temperatures of between 1° and 2° have been registered, and in East and North Bengal and North Behar the excess has been between half and one degree. For the whole of Bengal the excess has equalled about 0·6°. In Assam, on the other hand, a defect in the mean temperature of 1·3° is registered.

Rainfall.—The reports of rainfall received from Orissa are not yet complete, but so far the average fall for the week which has been recorded equals 5·70 inches. In East Bengal the fall has equalled 1·50 inches, in South-West Bengal 0·91 inch and in North Bengal 0·60 inch. In the districts further inland, the falls have been smaller, and South Behar and Chutia Nagpur report average falls of 0·11 inch and 0·14 inch respectively. In the case of South Behar, however, the rainfall has been mainly confined to the Sonthal Pergunnahs district. The only division where no rain has fallen is North Behar.

Comparing these falls with those which usually occur early in November, the falls in Orissa, South-West, East and North Bengal have been very largely in excess of the normal amounts, and the falls in South Behar and Chutia Nagpur do not differ much from the usual falls which may be expected. In North Behar at this season practically no rain ever falls, and hence rainfall cannot be said to have been deficient in that division.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Saturday, the 7th of November 1891 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 18th Oct. 1891.

The total fall from 1st January to 7th November 1891	46·93
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	64·74

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast; g gloomy; d drizzling rain; p passing temporary showers; ⌓, dew.

C. LITTLE,
For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;
Calcutta, the 9th November 1891.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending with Saturday, the 17th October 1891.

* Includes 7,580 tons and 7,497 tons during 1891 and 1890 respectively carried for Revenue, for which no "Up" and "Down" register maintained.

† Railway plant and rolling stock 8,401 tons and 13,520 tons for the year 1891 and 1890 respectively, for which no "Up" and "Down" register maintained.

Statement of principal commodities carried over the Eastern Bengal State Railway during the month of August 1891.

INCREASES.

	Tons.		Tons.
Coal ...	1,675	Tea ...	1,181
For railway and flotilla consumption.		Good season.	
Oil-seeds ...	2,623		
Good crops and an improved market.			

DECREASES.

	Tons.
Jute (unscrewed) ...	15,110
The decrease was in despatches from Serajgunge, Goalundo, Pangsa Rajbari, and principal Jute booking stations on the Northern Section, and is said to be due to lesser production.	
Railway plant and rolling stock ...	5,029
Probably due to lesser repairs and renewals.	

P. D. BARCLAY,
Traffic Superintendent.

CALCUTTA, *the* 28*th September* 1891.

THE CADASTRAL SURVEY OF BEHAR.

REVENUE DEPARTMENT.

RESOLUTION No. 1243 L.R.

Arrah, the 9th November 1891.

THE Government of India having sanctioned the resumption of survey and settlement operations in Behar, the Lieutenant-Governor considers that it will be to the advantage of all parties concerned that he should take an early opportunity of stating publicly the objects and intentions of Government in carrying out this undertaking.

2. Soon after the Bengal Tenancy Act, VIII of 1885, came into force, Mr E. W. Collin, C.S., was appointed to carry out the survey and settlement of a portion of the Mozufferpur district. These operations were initiated with the object of gaining some experience of the difficulties to be met with, and of the best and most economical methods of dealing with them, as well as of gauging their probable cost. They were avowedly intended to be of an experimental character, in the hope that, if successfully accomplished, they might be generally extended. The experiment lasted about a year, during which about 400 square miles were cadastrally surveyed and a record of rights was prepared for about 150 square miles.

3. The late Lieutenant-Governor, Sir S. C. Bayley, in submitting the final report of this work to the Government of India, expressed himself satisfied with the results of the experimental survey, and stated his opinion that there was good reason for desiring to extend the process to other tracts in the position

of that dealt with in Mozufferpur. He also intimated his view that, should the experiment which had been tried at the expense of the State be extended, the cost must be paid by the zemindars and ryots concerned, and that a charge of 8 annas an acre would be by no means excessive for the benefits conferred. The Government of India in reviewing this report concurred in Sir S. C. Bayley's view that it was desirable to extend the measure to other tracts. They regarded Mr. Collin's report as throwing much light on existing agricultural conditions in Behar, and as a valuable addition to the evidence already collected of the depressed state of the cultivating classes in that part of the country. They particularly noticed the fact that the Tenancy Act had defined and enlarged the rights of the tenants, and that in tracts like Behar an authoritative survey and record appeared to be indispensable to give reality to the provisions of the Act. In the review of this correspondence the Secretary of State wrote as follows:—

The Settlement Officer, who appears to have conducted his operations with skill and judgment, is careful to say that, for statistical purposes, generalisations cannot be safely based on the facts ascertained over a limited area of 56,588 acres. Still, so far as the proceedings went, they show—

(1) that the work of survey and of recording rights in Behar was smoother than had been expected; that it was satisfactory to the ryots and not disliked by the zemindars;

(2) that the whole operation can probably be carried out at a cost of not more than Rs. 320 per square mile;

(3) that the work has not given rise to litigation or class enmities, while it has safeguarded the position of the ryots and increased the value of their rights.

His Lordship went on to say that he noted the opinion expressed by the Government of India that, even if the continuous maintenance of the village record cannot be fully secured, still an accurate knowledge of existing facts would be of great advantage as affording a basis on which a better state of things might grow up under the Tenancy Act, and that a survey and record of rights ought to be attempted in other permanently settled tracts, where doubts prevail as to existing tenures and rents. He laid weight on the conclusion that the cost of the survey and of the subsequent maintenance of the village record must be kept within the narrowest possible limits, as the expenses will have to be defrayed by the classes and localities concerned, and said he would await with interest further information and proposals on these most important matters.

4. In March 1889 Mr. Boxwell, Commissioner of Patna, submitted a report on the question of extending the survey and settlement operations in his division. His conclusions were stated in the following words:—

(a) The evidence produced from many different places prove that all over the division there is a general uncertainty differing in intensity.

(b) Both the complaints of landlords and the attitude of the ryots prove that the ryots are beginning to appreciate their widespread right of occupancy.

(c) Transactions between zemindars, indigo planters, and ryots prove that there is uncertainty with respect to tenure,

(d) And that individual ryots are not strong enough to deal commercially with either of the other two parties

(e) The effect of the Tenancy Act in diminishing uncertainty about both rent and tenure is already felt.

(f) The effect of the Mozufferpur survey and record is universally acknowledged.

When this report and other papers connected with the subject came before Sir Steuart Bayley, in September 1889, he reviewed the question as a whole, and, with full knowledge of the condition of Behar, recorded his deliberate opinion that the considerations in favour of the proposed resumption of the Mozufferpur experimental survey-settlement proceedings decidedly preponderated. He asked the Government of India to accord sanction under

the Tenancy Act to a survey and settlement of rights of the Patna Division with power to exempt particular tracts for special cause shown: and he explained the delay in making this application by a reference to the proceedings which had been undertaken to gain further experience in lands under the control of Government, and to the surveys of estates the proprietors of which had voluntarily offered to pay the necessary expenses.

5. Sir Steuart Bayley considered that the effects of a survey-settlement would be to define the holdings and rents of each ryot, to place in the landlord's hands means which very few now have of proving without difficulty what they are entitled to claim, and to give the ryots the power of resisting illegal and improper claims. He foresaw that such a measure would be unfavourably received by the zemindars' employés, as it would put an end to the large profits made by those who collect rent for the proprietors, a numerous and powerful class divided into various grades, from the farmers of many villages to the patwari or gomashta. After giving all such considerations their full weight, the late Lieutenant-Governor, as has been said, recommended the adoption of the measure in question. At the same time, having regard to the partial failure in the Patna Division of the autumn and winter harvests of 1888-89, and to the serious injuries caused by the floods of 1889 to the autumn crops in Chumparun, Mozufferpur and Durbhunga, he proposed to postpone the commencement of the work until the effects of those calamities of season had disappeared.

6. The Government of India in reply stated that survey parties would be provisionally reserved for employment in Bengal upon the supposition that the Behar survey would be commenced in 1891-92; though, it was added, no final decision could be given authorizing the survey until the question of cost and the share which it was proposed to accept on the part of Government was more precisely determined. In reviewing this correspondence, the Secretary of State for India wrote on the 20th February 1890:—"I am glad to learn that it is proposed to carry on this important work as soon as the people recover from the loss caused by the scarcity of 1889. It is satisfactory that the Government of Bengal expect the cost of the work to fall below the sum, eight annas per acre, first estimated. I have no doubt that your Government will arrange for the diligent prosecution of the undertaking as soon as the circumstances of the country permit."

7. The outline of the correspondence as above presented is sufficient to show the progress made with the project, up to the time when the late Lieutenant-Governor had to abandon it temporarily on account of the scarcity of 1888-89. The question reserved by the Government of India for more precise determination has been fully examined and settled in the usual course, and, as a direct result of the Secretary of State's orders last quoted, the whole subject has again recently been laid before the Government of India, and proposals have been submitted for carrying out the survey and settlement of the four districts of the Patna Division which lie north of the river Ganges.

8. The Government of Bengal did not fail to represent, as clearly as possible, the difficulty of the work in prospect, and the fact that the scheme will not in the commencement commend itself favourably to the landed interests concerned. But Sir Charles Elliott expressed his complete concurrence with the views expressed by his predecessor that the advantages which will accrue to the people from the survey and settlement proceedings outweigh the inconveniences and difficulties that may arise, and that they justify the undertaking. His Honour entirely agrees with all that has been said during the course of the discussion as to the advantage and, indeed, the absolute necessity, of such a survey-settlement if administration is to be conducted with complete and accurate knowledge of economic facts, if famine is to be successfully combated when it comes, and if the relations of landlords and tenants are to be put on a secure and definite basis by the authoritative registration of areas held and rents fixed. He regards such a measure as a necessary corollary to the Permanent Settlement, and as the only way in which Government can give full effect to the principles laid down by the Bengal Tenancy Act as to the rights of the different classes of ryots, by creating an accurate record of those rights, and establishing a system for registering them in future.

9. In reply to this communication, His Excellency the Governor-General in Council has now been pleased to issue orders sanctioning the proposed operations. In view of the partial failure of the late rains and the prospects of some degree of scarcity, it is not proposed to begin the survey this year, but arrangements are being matured for making a commencement of the work this season, by demarcating the village boundaries and starting the skeleton or traverse survey (the cost of which will be borne by Government), while the field-to-field survey will be put in hand in November 1892. The reasons why it is in contemplation to confine the survey and settlement to the districts of North Behar are that the evils arising from the uncertainties of tenures and want of a record of rights have been felt there more than elsewhere, on account of the poverty and density of the population.

10. Sir Charles Elliott has not failed to notice indications of uneasiness felt by the classes interested, and especially the zemindars, and there can be little doubt that much of this uneasiness is due to misconception on the part of those classes of the objects of the survey-settlement proceedings, and of the spirit in which they will be carried out He has therefore deemed it desirable, besides recapitulating briefly the official history of the measure in hand, to give some explanation of its scope and character.

11. The objects of the cadastral survey and settlement of Behar are to obtain an accurate record (1) of the area and situation of all villages and estates, of each tenure and of each ryot's holding within an estate, and (2) of the status of everyone who has rights in the land and of the rent paid by each ryot and tenure-holder. In other words, the intention is to carry out accurately what every zemindar is understood to attempt to carry out more or less accurately, but often fails in doing. On every estate zemindari accounts are kept up, which correspond in all but accuracy to the khasra and khatian of the settlement, and it is incredible that the zemindars should really wish not to have the opportunity of making these accounts correct. The Lieutenant-Governor has recently ascertained by personal enquiry the value which gentlemen of such experience as Messrs Burrows, Thomson and Mylne of Becheea in Shahabad attach to the information collected in the cadastral survey which was effected for the canal-irrigated villages in that district. His Highness the Maharaja of Tipperah is so convinced of the utility of a cadastral survey that he has recently made application to the Government to have such a survey carried out in all his estates which lie in British territory. It is within the knowledge of the Court of Wards and of Government that, in the zemindaris which have come under the temporary management of the Court, there is generally an ignorance on the part of the late proprietors' officials of the rights and interests appertaining to the estate which is altogether incompatible with successful administration. In one important estate still under the Court whole-mehals had been lost sight of and had paid nothing to the proprietors for many years: in other estates, where survey-settlements had to be undertaken, it came to light that managers were ignorant whether the estates were compact or scattered, or where the lands were situated. It is a fact also, of which zemindars must be fully cognizant, that purchasers of estates are often unable to find out what are the boundaries of the property they have bought, or to obtain any records showing who the ryots are, where their lands lie, or what their rents are. These are instances of the inconveniences and defects which would all be removed by a field-to-field survey and an accurate record of rights.

12. On the other hand, the gain to the ryot of having his rights recorded and his status and rent determined is incontestable. The law has bestowed on him certain rights, and the Government has decided that it is the duty of the administration to provide him with the means of knowing precisely wherein they consist. This knowledge will benefit him in his dealings with his zemindar in any dispute as to the rent due to him, with indigo planters when he wishes to lease his fields to them, and with the Opium Department officers when he applies for an advance for growing opium on his land.

13. Putting aside the fear of the unknown, which will be dissipated as the work of survey goes on, and the fear of increased litigation, which the experience of Mr. Collin's experimented survey shows not to be probable, it appears to the Lieutenant-Governor that the main reason for which the contemplated cadastral survey of Behar will not be welcomed, in the first instance,

by the land-owners of the division, is their fear of the cost of the proceedings. The Lieutenant-Governor cannot hope altogether to dispel this fear, but he believes that explanations will do a good deal to diminish it. After carefully examining all that has been written on this subject, the Bengal Government has come to the conclusion that, as an estimate based on the actual cost hitherto incurred elsewhere, the entire charge cannot be safely taken at less than eight annas an acre, though it is hoped that there will be some reduction in the expenditure when the operations are undertaken on a wider scale than they have hitherto been carried out anywhere. Of this estimated cost of 8 annas an acre, the Government of India has accepted the charge of one-eighth of the total expenditure as representing the cost of traverse surveys. Of the rest the Lieutenant-Governor has decided that half, or three-and-a-half annas an acre, should be paid by the zemindars, and the other half divided among the subordinate interests. Thus a ryot holding an area of 3 or 4 acres may have to pay 10½ or 14 annas, an amount which certainly cannot be considered excessive, since it ensures him security in the possession of those rights which the Tenancy Act has declared to belong to him. The lowest charge for a copy of an extract from the jamabundi exceeds one rupee, and His Honour understands that cultivators often pay even larger sums for documents or considerations of much less real value than the extracts from the khasras and khatians will be to them. The zemindars who own large properties will necessarily have larger total sums, but not proportionately larger charges, to pay: but in return, though no general increase in the rents of ryots can be contemplated, they will reap some return from the discovery of concealed holdings, and of tenures in which a large increase of area has taken place without any corresponding rise in rent, which will go some way towards compensating them for the outlay entailed upon them. Moreover, the survey itself will, it has been calculated, take about five years for two parties at the rate of 2,500 square miles a year, so that the total sum payable by the general body of zemindars each year will be distributed over a considerable period. In some cases, no doubt, the aggregate amounts which will fall upon single zemindars in any one year will be large; and to meet this difficulty, the Government intends to facilitate payments by allowing them to be liquidated by instalments. Sir Charles Elliott has no doubt whatever that in the end the zemindars will find the results well worth the money they will have, under the law, to pay for the survey and settlement operations. He feels sure that the zemindars of the large estates in which such proceedings have recently been completed would agree in the view that they have received, by an accurate and a well-ordered rent-roll which has been generally accompanied by a slight increase in rents, good value for their expenditure. It is the Lieutenant-Governor's intention to have published shortly an account of what the surveys and records-of-rights in those large estates have cost and the returns they have produced to the landlords, so that the zemindars of North Behar will be in a position to judge for themselves of the advantageous results which they may anticipate.

14. His Honour need hardly notice the suspicion, if any such exists, that the survey and settlement operations are intended to restrict just rights. There is no intention whatever on the part of Government to restrict the just rights of a single individual or of a class: nor would Government have the power to do so if it so desired.

15. The Lieutenant-Governor's object, in making the statements contained in this Resolution, has been to dispel the prevailing ignorance of the real objects of a survey-settlement and the intentions of Government and to make known the truth; and he trusts that the effect of what he has ordered to be published will be to show that some of the suspicions which may have obtained credence are unfounded and some are exaggerated; and that in the minds of those who are best able to judge, the conviction will be established that the settlement-survey of Behar is likely to produce great benefits to all classes who are interested in the land.

ORDERED—That a copy of this Resolution be published in the *Calcutta Gazette* for general information.

By order of the Lieutenant-Governor of Bengal,

C. E. BUCKLAND,

Offg. Secretary to the Govt. of Bengal.

RESOLUTION REVIEWING THE ADMINISTRATION REPORT OF THE CALCUTTA MUNICIPALITY FOR THE YEAR 1890-91.

MUNICIPAL DEPARTMENT—MUNICIPAL.

No. 2521.

Calcutta, the 9th November, 1891.

RESOLUTION.

READ—

The Administration Report of the Calcutta Municipal Corporation for the year 1890-91.

The Report, which is due to Government on the 1st August, was submitted on the 17th September, a month earlier than in the preceding year, but still considerably later than the proper date. No reason is alleged in the report to justify the delay in its submission. Moreover the form of the report itself is disappointing, and the Lieutenant-Governor would have expected something more than a series of tabular statements either printed without note or comment, or strung together by a few bald sentences of explanatory letter-press. The work done by the Corporation of Calcutta is of the highest importance, and in justice to itself, its report should be particularly clear and well arranged. The City of Calcutta is something more than a great commercial emporium. Rightly or wrongly, it is regarded as one of the chief centres of endemic cholera, whence the disease is likely to be imported into Europe. Its municipal administration is therefore a matter of international interest, and is jealously watched by the medical experts of those European countries which are liable to visitations of cholera. In these countries the belief in the efficacy of quarantine is still unshaken, and any appearance of neglect, any relaxation of the sanitary standard of Calcutta, may, if followed by an increase of cholera mortality, lead to the introduction into their ports of more stringent regulations, which would seriously injure the trade of this city, and thereby reduce the value of property generally. A clear and graphic description of what the Corporation have done, and are doing, to improve the sanitation of Calcutta would clear up much of the misunderstanding that now prevails on the subject, and would enable their critics to realise more clearly the true nature of the difficulties which the Commissioners have to contend with.

Attendance of Commissioners.

2. The statistics of meetings given in the report afford ample evidence that the amalgamation of the Town and the Suburbs, effected by the Municipal Consolidation Act of 1888, has added largely to the work and responsibility of the Commissioners, though not so largely as might have been expected. The number of general meetings fell from 34 to 29, and there were only 4 Special Committees against 12 in the preceding year, the aggregate number of meetings held by them being 19 as compared with 66 in 1889-90. On the other hand, the number of meetings of Standing Committees rose from 125 to 138, and of Sub-Committes from 57 to 90. The total number of meetings of all kinds was 276 against 282 in the preceding year. Eighteen Commissioners attended more than 50 meetings during the year, against 26 who showed the same degree of diligence in 1889-90; and 8 Commissioners, of whom 6 were elected and 2 nominated, were present at more than 100 meetings. The Lieutenant-Governor has no doubt that much work was done at the deliberations which these statistics represent, and it may be inferred from the designations of the Committees that the Corporation was occupied during the year with the business of general administration, with basti and town improvement, with the extension of the water-supply, the improvement of the Suburbs, the Central Road, the Hackney Carriage Bill, and other measures of importance. But the Report contains no connected account of the work done by the Commissioners at these various meetings, such as has usually been given in previous years; nor has this information been distributed under the various heads of administration that are treated of.

Loans.

3. The loan liability of the Corporation stood as follows at the close of the year:—

	Rs.
6 per cent. debentures	1,12,000
5 ditto	1,43,00,900
4½ ditto	10,48,300
	1,54,61,200
Consolidated loans from Government	58,00,571
Total ...	2,12,61,771

Two new loans at 5 per cent. were raised during the year—one for 20 lakhs in June, and another for 10 lakhs in December. The tenders for the first loan aggregated 77½ lakhs, and eventually Rs. 13,70,000 were allotted on tenders over 3 per cent., the balance being divided among tenders at that rate of premium. For the second loan 145 tenders were received, amounting to Rs. 65,40,400, and the stock was allotted to the two highest; thus—

	Rs.
At Rs. 106	4,000
At Rs. 105-14	8,36,200
Total ...	8,40,200

The balance was disposed of by issuing debentures at 5 per cent. for Rs. 1,59,800 to holders of the second 6 per cent. loan of 1870. These results may fairly be claimed as showing that the credit of the Corporation stands high and tends to rise in the money market of Calcutta. The total loan liability has risen, as has been noticed above, from 187 lakhs to 212 lakhs, but within the same period the 6 per cent. debentures have been reduced from Rs. 4,17,500 to Rs. 1,12,000, partly by repayment in cash, and partly by transfer to loans at a lower rate of interest. Of the two loans raised during the year, Rs. 13,31,000 were set apart for the Central Road, Rs. 12,00,000 for water-supply, and Rs. 4,69,000 for drainage and repayment of loans. While the liabilities of the Commissioners have increased, their assets have not remained stationary. The annual valuation which serves under the Act as the measure of their borrowing capacity rose from Rs. 1,73,70,515 to Rs. 2,01,35,128, and the Commissioners have therefore the legal power at the present time to extend their issues of 5 per cent. debentures up to a total amount of Rs. 3,35,00,000.

Income and expenditure.

4. No attempt is made in the Report to elucidate the bare figures of receipts and charges, which are given without note or comment in Chapter II, nor is any explanation offered of the differences between the actuals and the budget estimate of the year and the actuals of the preceding year. The Lieutenant-Governor hopes that in future reports this important subject may be treated in a more instructive fashion. The actual income of the Municipality during 1890-91 was Rs. 42,06,412 and the expenditure Rs. 44,71,169, against Rs. 42,17,123 and Rs. 41,27,883 respectively in 1889-90. The deficit of Rs. 2,64,757 on the year's working appears to have been met partly from the opening balance and partly by transfers from capital account, but no clear explanation of this is given in the Report. The principal items of receipts and charges were the following:—

	Rs.
Receipts.	
General rate at 9½ per cent.	15,48,714
Sewage rate, &c.	3,29,227
Water rate, &c.	9,70,170
Lighting rate	3,25,541
Taxes	5,14,849
Municipal Market	1,21,657
Expenditure.	
Interest on loans	4,66,277
Contribution for repayment of loans	1,70,623
General establishment	3,92,012
Road department	4,47,496
Bullocks and stabling	2,07,115
Conservancy	2,63,572
Sewage rate charges	2,98,190
Water rate charges, including interest on loans, Rs. 4,88,461, and contribution for repayment of loans, Rs. 1,87,917	10,20,697
Lighting, &c.	3,49,807

No change was made during the year in the rates, which aggregated 19½ per cent. on the annual valuation of property liable to assessment. The incidence of taxation amounted to Rs. 5-10-11 per head of the population recorded in the recent Census.

Collections and balances.

5. The budget estimate for the four rates—the general, sewage, lighting and water rates—which make up the bulk of the Commissioners' income amounted to Rs. 31,39,200, while the actual receipts under these heads were Rs. 31,73,652. The following statement comparing the outstanding balances during the last three years shows that the aggregate outstandings of rates tend continually to increase:—

		Outstanding balance of rate bills.		
		End of 1888-89.	End of 1889-90.	End of 1890-91.
		Rs.	Rs.	Rs.
Under collection by Assessors	...	58,173	67,489	65,051
" " Collector	...	26,014	1,09,690	1,14,649
" " Joint Collector	...	......	43,531	60,198
" " Warrant Superintendent ...	...	93,841	1,51,969	1,71,032
Total	...	1,78,028	3,71,679	4,10,930

It would appear from this statement either that the collections must have been materially under-estimated when the budget was drawn up, or that allowance must have been made for failure to collect some 12 per cent. of the revenue of the year.

6. In explanation of the arrears in the Collector's hands, it is stated that until the revised valuation of properties has been completed and land-holders have become reconciled to the law regarding basti rates, the collections cannot be expected to regain their former standard. The arrears in the Joint Collector's Department are attributed to the fact that the rate-payers of what was the Suburban area have not yet learned to pay punctually the enhanced rates due to amalgamation with Calcutta and the revision of the assessments under section 123; that the procedure for issuing warrants in Calcutta is less expeditious than was the case in the Suburban Municipality; that only a small proportion of the basti bills are realised within the quarter for which they are due; and that the practice recently abandoned, of collecting from the tenants in certain cases sums for which the landlords default, tends to encourage the latter to attempt to evade payment. It is also alleged that in the case of certain Government buildings assessed for the first time during 1889-90, the taxes have not been realised pending reference to Government; while some miscellaneous bills, forming part of an arrear balance amounting to Rs. 17,530, were delivered to the Joint Collector so late that no action could be taken on them during the year. No explanation is given of the arrears in the Warrant Department, which have risen from Rs. 1,51,969 in 1889-90 to Rs. 1,71,032 in the present year.

It has been anticipated from the first that the new assessment section leading to a general increase in the rating of residential houses would increase the difficulties of collecting the rates punctually. There is, however, nothing in the Report to show that this cause alone is mainly answerable for the heavy outstandings of the past year, and the Lieutenant-Governor is disposed to think that there is room for much improvement in this branch of the municipal administration.

In paragraph 74 of the Report, the Commissioners furnish the separate statistics asked for in the last year's Resolution, of the demand and collection of basti rates since the new provisions of the law have come into force. It appears that the gross demand from the 1st quarter of 1888-89 to the last quarter of 1890-91 amounted to Rs. 8,41,091 and the collections to Rs. 6,28,974, while the remissions were Rs. 14,499 and the transfers Rs. 1,72,673, leaving an outstanding balance at the close of the past year of Rs. 24,943. These results appear to be on the whole satisfactory, but the statistics, like many others given in the Report, are put forward without a word of explanation tending to elucidate the facts which they represent.

License Department.

7. The gross receipts of the License and Registration Department, including the tax on Trades and Professions, the tax on carriages and animals, and fees for the registration

of carts and hackeries, carriages, palanquins, bullocks and cowsheds, rose from Rs. 6,10,461 to Rs. 6,34,995. The receipts from the tax on Trades and Professions, which make up more than half the amount collected in this department, increased from Rs. 3,15,719 to Rs. 3,29,640. Out of 29,940 assessees, 20,490, or 68·4 per cent., paid the tax during the year, the total amount realized being nearly 70 per cent. of the demand. There were 47 formal appeals and a large number of informal appeals against the assessment, which was modified in 539 cases during the year, the aggregate amount remitted being Rs. 5,695. From a table given in the Report, it appears that the list of assessees includes 272 Joint-Stock Companies, of which 53 have a paid up capital of 10 lakhs of rupees and upwards; 225 practising Barristers, Attorneys and Pleaders of the High Court, 266 Pleaders of subordinate Courts, Mukhtears and Law Agents, 26 Surgeons and Physicians, 97 Licentiates of Medicine and Veterinary Surgeons, 113 Native Doctors, Kabirajes, and Hakims, 583 itinerant dealers and 11,353 petty dalals and miscellaneous shop-keepers. Now that a new Hackney Carriage Act has been passed, it is interesting to notice that within the last ten years the number of first-class carriages registered rose from 55 to 75, that of second-class from 1,618 to 1,630, and that of third-class from 1,248 to 1,829. In 1883-84, the year of the Calcutta Exhibition, the number of second-class carriages rose to 2,021, which probably indicates that a number of private palki-gharries were converted into hired vehicles for that occasion. With this exception there has been no very marked increase in the number of second-class carriages, which is now practically the same as it was ten years ago. Third-class carriages, on the other hand, show a steady increase notwithstanding the introduction of tramways.

Valuation.

8. Section 123 of the Act prescribes that the whole area of Calcutta shall be revalued every six years, and section 129 provides for the division of the town into districts and the revision of the annual value district by district. During 1890-91 revaluations appear to have been undertaken in 13 out of the 25 wards into which the town is divided. In 7,933 cases the assessment was increased and in 3,525 cases it was reduced, the financial result being a net increase in the valuation of Rs. 27,64,013 and in the assessment of Rs. 4,69,744. That the increase in the assessment does not bear a higher ratio to the enhanced valuation is understood to be due to the fact that houses and lands, no part of which is within 150 yards of the nearest stand-pipe, pay water-rate at only 3 per cent. on their annual value. The Lieutenant-Governor finds, however, some difficulty in reconciling these figures with those given in the statement in paragraph 62, showing the working of the assessment sections. According to the latter statement the valuation of the town before revision amounted to Rs. 1,44,96,885; the valuation after revision, but before the objections had been disposed of, to Rs. 1,53,81,620; and the valuation after the objections had been determined, to Rs. 1,50,96,063. Now obviously the first of these figures ought to tally, and does approximately tally, with the valuation (Rs. 1,44,86,479) as it stood at the end of 1888-89, when revision operations under the new law had not been commenced; while the last, representing the progress made in revision up to the end of the year under review, ought to correspond with the amount (Rs. 2,01,35,128) shown as the valuation on the 31st March 1891. No such correspondence, however, is traceable in the latter case, nor is any explanation given of the great discrepancy between figures which purport to represent identically the same set of facts. No less than 1,237 objections to the assessor's valuations had remained pending from the previous year, and 3,280 objections were filed within the year under report. The number of objections, therefore, to be determined by the Chairman and Vice-Chairman under section 136 was 4,487. Of this only 1,259 were disposed of during the year, leaving 3,228 pending. These figures point to a difficulty which may require to be met by an amendment of the Municipal Act. Under the law as it stands now, the Vice-Chairman is the only officer whom the Chairman can depute to determine objections, and the number of objections has increased and tends to increase so largely that it is doubtful whether the Chairman and Vice-Chairman can possibly keep pace with the work. The Commissioners have submitted to Government a special representation on this subject, which will have the Lieutenant-Governor's careful consideration.

Results of the Census.

9. The Census of Calcutta was taken on the night of the 26th February 1891, under the supervision of Mr. H. F. T. Maguire, C.S., whose services were placed at the disposal of the Commissioners for this purpose. Mr. Maguire's report has not been sent up by the Commissioners, and the account given in the Municipal Report of the results of the enumeration is so meagre as to offer practically nothing to review. The population was found to be as follows:—

	1891.			1881.		
	Males.	Females.	Total.	Males.	Females.	Total.
In the old town ...	287,034	149,359	436,393	257,778	143,893	401,671
In the added area ..	128,007	85,001	213,008			
In the Fort ...	3,119	349	3,468			
In the Port ...	26,515	73	26,588			
In the canals ...	2,072	30	2,102			
	446,747	234,812	681,559			

Arranged with reference to conjugal condition, the statistics give the following proportions:—

Conjugal Condition.	Percentage on Population.						Percentage on Sex.			
	Male.		Female.		Total.		Male.		Female.	
	1891.	1881.	1891.	1881.	1891.	1881.	1891.	1881.	1891.	1881.
Single	19·6	20·5	8·7	7·9	28·3	28·4	30·5	32·2	24·4	21·7
Married	42·0	40·3	16·3	15·5	58·3	55·8	65·5	63·2	45·2	42·7
Widowed	2·5	2·9	10·9	12·9	13·4	15·8	4·0	4·6	30·4	35·6
Total ...	64·1	63·7	35·9	36·3	100·	100·	100·	100·	100·	100·

In this table the figures for 1891 relate to the entire town, while those for 1881 exclude the suburban area added under the Municipal Act of 1888. No precise comparison between the statistics of the two periods can therefore be attempted. It deserves notice, however, that the disproportion of females which has always been a characteristic of the population of Calcutta, has become slightly more marked since the inclusion of the Suburbs—a result which was *primâ facie* hardly to be looked for, since it appears probable that the added area contains a larger proportion of resident families than the town. Along with a slight decrease in the proportion of females to the total population, the figures show a considerable decline in the proportion of widows among them. Of the females enumerated in the town in 1881, no less than 35·6 per cent. were widows, and this proportion has fallen to 30·4 per cent. among the females recorded in 1891. The average density of the population per acre varies from 226 in Colootola, 161 in Jorabagan, and 159 in Jorasanko, to 11 in Alipore and Ballygunge. Classified according to religion, the inhabitants of Calcutta comprise 428,760 Hindus, 189,226 Mahomedans, 26,406 Christians, 2,145 Buddhists, 493 Jains, 1,387 Jews, 168 Zoroastrians, 108 Sikhs, and 708 Brahmos. It is understood that the results of the Census of Calcutta will be exhaustively examined by the Superintendent of Census, Bengal, in his report on the Census of the entire Province, and in reviewing that report the Lieutenant-Governor will take the opportunity of discussing the Calcutta statistics more fully than is possible on the very meagre particulars given in the Municipal Report.

10. The report of the Health Officer of Calcutta, like those of the Sanitary Commissioners throughout India, is for the calendar year, and deals separately with the vital statistics of Calcutta proper and of the amalgamated portion of the Suburbs. The Lieutenant-Governor approves of the proposal of the Commissioners that in next year's report the vital statistics of the entire municipal area shall be dealt with as a whole. The following statement compares the births and deaths of the town and the added area during the last two years, the ratios per thousand being calculated on the population recorded in 1891, except in the case of the town mortality for 1889, which is reckoned on the population of 1881:—

Vital statistics.

	Town.		Suburban area.	
	1889.	1890.	1889.	1890.
Number of births ...	8,753	7,948	3,565	3,970
Ratio per 1,000 ...	20·2	17·0	16·5	18·4
Number of deaths ...	11,682	12,382	7,882	7,980
Ratio per 1,000 ...	26·9	26·5	36·5	37·4

In last year's report the mortality for the Suburbs was calculated on the population of 1881, giving a death-rate of 46·9 per thousand, which the results of the present Census show to be considerably in excess of the true rate. Even after this correction has been made, the mortality of the suburban area still exceeds that of the town by nearly 11 per thousand. No attempt is made to explain this difference by reference either to the sanitary conditions of the two areas, or to the habits of the population. Taking the mortality by wards, it appears that the highest death-rates in Calcutta were recorded in Hastings (38·5), Bamanbasti (37·1), Jorabagan (31·4), and Burtollah (29·9), while in the suburban area Alipore (41·3), Kidderpore (41·2), and Bhowanipore (3[illegible]·9) show the highest rates. In Hastings the death-rate from cholera was 4·1 and from fever 17·8 per thousand. Kidderpore shows a death rate of 4·9 from cholera and 17·0 from fever; and Alipore 11·6 from fever and 8·5 from bowel-complaints. In the suburban area the mortality of the year did not materially exceed that of 1889. The increase of 700 deaths in Calcutta is attributed mainly to fever, which the Health Officer thinks may have been caused by the sewers, "which, when flooded, leak and pollute the soil of Calcutta and its sub-soil water." In putting forward this novel theory, the Health Officer seems to make rather too much of the suggestion thrown out by Mr. Baldwin Latham in paragraph 20 of his report on the sewerage of Calcutta, that the existing sewers, when full to overflowing, "must let the sewage out into the sub-soil." Mr. Baldwin Latham's conjecture rests only upon a hurried examination of the Calcutta system of sewer, and has not been verified by experiments; while the Engineer of the Corporation, who has been occupied with the sewers for years past, states distinctly that, having stripped sewers of all sizes in Calcutta, he has "never found any indication whatever of the penetration of sewage into the adjacent soil." Apart from this, the report of the Sanitary Commissioner for Bengal shows that during the year 1890 fever mortality was unusually high in the Presidency Division and in the small municipalities near Calcutta—a state of things which clearly cannot be attributed to the Calcutta sewers, and which seems to point to the operation of some more general cause.

As regards cholera, the year was a favourable one, the number of deaths (963) being the lowest during the last twenty-five years, with the exception of 1871, when the cholera mortality was 796, and 1880, when it reached 805. A notable outbreak occurred during the first fortnight of February, which was confined to certain localities into which the disease is thought to have been imported by the arrival of infected persons from the neighbouring districts.

The mortality from small-pox rose from 71 in 1889 to 700 in 1890 owing to the prevalence of a severe epidemic during February, March and April. The section most violently affected was Jorabagan, where 180 deaths occurred. This quarter is largely inhabited by up-country people, who are said to have strong prejudices against vaccination. It is satisfactory to find that in consequence of the epidemic a larger number of persons were vaccinated than in previous years, and that vaccination was introduced into several Marwari and Khatri families who had hitherto resisted it.

11. The working of Mr. Harrington's incinerator, which was purchased by the Corporation, is, on the whole, favourably reported on. It appears to burn refuse in sufficient quantity thoroughly and regularly, and it can be worked without skilled labour or excessive supervision. Its only defect is said to be its failure to consume its own smoke, and Mr. Baldwin Latham has suggested a method of getting over this difficulty, which is under consideration by the Commissioners. Meanwhile the working of the incinerator has been stopped. The Health Officer also, who was recently deputed by the Corporation to represent them at the Congress of Hygiene and Demography, was instructed, when in Europe, to take the opportunity of acquiring information on the subject of cremators suitable to the climate and conditions of Calcutta. The Lieutenant-Governor hopes that his inquiries may indicate the means of successfully

overcoming the defect in the present incinerator. The cost of Dr. Simpson's journey will have been money well spent if it results in providing Calcutta with a cheap and wholesome means of disposing of the constantly increasing mass of insanitary refuse.

Water-supply.

12. Convincing proof of the close relation that exists between the improvement of water-supply and the diminution of cholera is afforded by the fact that during the five years 1866—1870, before filtered water was brought into Calcutta, no less than 18,422 deaths from cholera occurred in the town, being 8·5 per thousand of the population as it then stood. With the introduction of filtered water, the mortality during the next five years dropped to 5,922, or 2·7 per thousand. Between 1876 and 1880 a slight increase to 6,598 deaths, or 3·0 per thousand, was observed, and in the five years 1881—1885, when population was beginning to outrun the water-supply, cholera mortality rose to 9,845 deaths, or 4·5 per thousand. Finally, the effect of the water-supply extension of 1888 has been to reduce the deaths from cholera during the five years 1886—1890 to 6,773, or 2·8 per thousand on the present population of the Municipality. In the twenty-one years, therefore, during which the town has been supplied with pure drinking-water, the death-rate from cholera has been reduced to little more than one-fourth of its former standard, and there is every reason to hope that the further extension of this benefit will not fail of its effect. The Engineer's report shows that at the close of the year under review the length of mains and services on the filtered system amounted to 231 miles, of which 47 miles were laid during the year. The average daily supply per head of the population was 39·46 gallons in the town and 15 gallons in the added area. A new pumping-station, designed to supply the southern portion of the added area, was commenced at Bhowanipore, and very creditable progress was made in the buildings during the year. The Lieutenant-Governor has under consideration a scheme, the object of which is to make it easier for other municipalities in Bengal to follow the excellent example set them by the Calcutta Commissioners in the matter of water-supply, by enabling them to combine their resources for this purpose, and thus to carry out projects which would otherwise be beyond their means.

Drainage.

13. The problem of efficiently draining an area which so nearly approaches to a dead level as the City of Calcutta is necessarily one of considerable difficulty, and doubts have often been expressed as to some features of the system adopted. The extension of the municipal limits, so as to include the Suburbs, has obliged the Commissioners to consider the question of undertaking new drainage works, and they very wisely resolved to take the opportunity of the presence in India of Mr. Baldwin Latham, a well-known Sanitary Engineer, to obtain his opinion as to the best means of draining the 12·82 square miles known as the "amalgamated area," and at the same time of improving the Calcutta system. Mr. Baldwin Latham spent about three weeks in Calcutta, and prepared a scheme for the drainage requirements of the Municipality, which, with an elaborate and careful note by the Engineer to the Corporation, forms part of the voluminous appendices to the Annual Report. The project is a large one, and, according to the estimates recently worked out by the Engineer, will cost about Rs. 1,70,69,000 to carry out fully. The Lieutenant-Governor trusts, however, that if recourse is had to the improved methods of sanitary engineering which have been introduced in England within the last few years, it may be found possible to effect material reductions in this estimate.

Education.

14. Chapter VII of the Report, bearing the title Public Instruction, is singularly wanting in information on the important question, how far the Calcutta Municipality attempts to provide primary education for the boys and girls within its area. It consists of five lines of print and an unexplained table of grants-in-aid to schools situated in the Suburbs, aggregating Rs. 3,141, the whole of which, however, is said not to have been claimed during the year. Nothing is said as to the class of schools aided, the principle on which the grants are made, or the steps taken to obtain proper value for the money spent. It appears from the report of the Director of Public Instruction that on the 7th August last the

Secretary to the Corporation informed the Inspector of Schools, Presidency Circle, that the expenditure incurred by the Municipality during the year had been Rs. 678. The Inspector also observes—

"So far as I am aware, the Corporation has no special officers for the examination and inspection of the schools, and no special rules for the payment of rewards. Such being the case, it is but natural that there should be occasional irregularities. For instance, under section 36 (clause 12) of Act II (B.C.) of 1888, the Corporation is authorised to help primary and technical schools only. But from the returns furnished by the Secretary for the year 1889-90, it appears that middle schools also enjoyed a considerable share of their patronage. Again, it is not unusual for unscrupulous men to start pathsalas at the close of the year for the purpose of earning rewards, and melting away as soon as that object is fulfilled. The possibility of such malpractices is no mere hypothesis. A case of this nature is reported by the Sub-Inspector, in which one Bhutnath Mukerji of Khidderpur, Koyla Sarak, is said to have improperly earned some municipal money by showing off a pathsala attended mostly by pupils from other schools. The matter is still under investigation."

The Director of Public Instruction has been asked to inquire further into the discrepancy in the figures, the alleged short expenditure, and the mode of administering the educational grant in Calcutta, and the Lieutenant-Governor trusts that the Commissioners themselves will pay attention to the subject and treat it somewhat more fully in their next report.

15. In paragraph 18 of the Resolution on the Report of the Calcutta Municipality for 1889-90, the attention of the Commissioners was drawn to section 37, clause 7 of the Municipal Act, under which not less than three lakhs of rupees must be spent every year on the improvement of the area added to Calcutta, and they were requested to state specifically in future reports the manner in which this provision of the law had been complied with. This request appears to have been overlooked. Nowhere in the body of the Report is there any such specific statement as was asked for in the Resolution. Paragraph 136 mentions various sums sanctioned for work in the amalgamated area, but there is nothing in that paragraph to show what proportion of these sums was actually spent during the year. A reference to the detailed accounts forming Appendix D to the Report appears to indicate that Rs. 9,65,920 were laid out on suburban water-supply and Rs. 1,17,741 on roads and improvements in the amalgamated area; but it need hardly be observed that the fact of the Commissioners having thus amply fulfilled their statutory obligations should have been prominently brought forward in the Report, instead of being left to be gathered in a more or less conjectural fashion from a body of accounts nearly a hundred pages in length. The expenditure on basti cleansing and structural improvements of the town amounted during the year to Rs. 2,31,993 against Rs. 2,46,572 in 1889-90.

Basti cleansing, structural and suburban improvements.

16. Notwithstanding the defects of form which have been pointed out, the Report discloses much excellent work done by the Commissioners, and real progress made in several important branches of municipal administration. That the public believe the financial position of the Corporation sound is proved by the practical test of their loans being readily taken up, although the rate of interest has been reduced. The money thus raised appears to have been wisely laid out. The water-supply has been extended, an improved drainage scheme has been prepared, work on the Central Road has been pushed forward, the question of the disposal of refuse has been advanced a stage by the experimental purchase of an incinerator, revision of assessments has been carried on, and a variety of useful improvements have been made in the added area. The thanks of the Lieutenant-Governor are due to the Commissioners, the Chairman, the Health Officer and the Engineer for the energy and good will they have shown in meeting the increased responsibilities laid upon them by the introduction of the new Municipal Act.

General.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Offg. Secretary to the Govt. of Bengal.

ANNUAL REPORT ON THE WORKING OF THE LICENSED WAREHOUSE AND FIRE-BRIGADE ACT IV (B.C.) OF 1883.

The following report is published for general information.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Offg. Secretary to the Government of Bengal.

ANNUAL REPORT OF THE WORKING OF THE JUTE WAREHOUSE AND FIRE-BRIGADE ACT IV (B.C.) OF 1883, IN THE HOWRAH MUNICIPALITY, DURING THE YEAR 1890-91.

Number of Warehouses licensed. Appendix A.

Thirty-two warehouses for the storage of jute, cotton, and other fibres were licensed during the year, as against thirty-six in the previous year, and a classified list of them is given in Appendix A under the headings—

I. Jute and Cotton Warehouses.
II. Warehouses connected with Jute Mills.
III. " " " " Presses.
IV. " " " Cotton Mills.
V. " " " Roperies.

Receipt and expenditure.

2. The gross receipt on account of the licenses granted was Rs. 6,250, which is less by Rs. 250 than that in the previous year; and the expenditure was—

	Rs.	A.	P.
80 per cent contribution to fire-brigade	4,600	0	0
Salary of Inspector at Rs. 50 per month ...	600	0	0
Personal allowance to Inspector at Rs. 20 per month ...	240	0	0
Contingencies	73	8	0
Total ...	5,513	8	0

The Municipal Accounts show an expenditure during the year of Rs. 10,793-8-0, but this includes payment of Rs. 5,280 to the Commissioner of Police in adjustment of the overdue 80 per cent. contribution for the previous year.

Fire-brigade station and outposts.

3. The head Fire-brigade station, centrally situated near the Municipal market, consists of a double storied building with suitable stabling and out-offices, standing on 1¼ bighas of land, presented by the Commissioners in 1889, and on the terraced roof of the main building, which is 30 feet high, is a look-out, the observer in which is 65 feet above the level of the ground.

In addition to this, there is a Fire-brigade outpost at the Seebpore thanah, and another at Bandaghât, Sulkia, the rental of which is paid by the Commissioners at the rate of Rs. 10 per month.

Fire-brigade Budget for 1890-91.

4. The Fire-brigade Budget on the expenditure side for 1890-91 was—

ESTABLISHMENT.

				Rs.	A.	P.
1	Superintendent	at Rs.	20 per month	240	0	0
1	Engineer	"	130 "	1,512	0	0
1	Tindal	"	10 "	120	0	0
1	Fireman	"	10 "	120	0	0
3	Tindals	"	8 each "	288	0	0
12	Khalasees	"	7 " "	1,008	0	0
6	"	"	6 " "	432	0	0
1	Engine-driver	"	10 "	120	0	0
3	Syces	"	7 each "	252	0	0
			Total ...	4,092	0	0

CONTINGENCIES.

	Rs.	A.	P.
Feed and keep of horses, including shoeing, veterinary attendance, repairs of harness, &c. ...	750	0	0
Rewards to informers giving notice of fires ...	50	0	0
Repairs of engines and brake-vans	500	0	0
Steam-engine hose and gear.	200	0	0
Purchase of a horse	600	0	0
Repairs of building and look-out	300	0	0
Sundries—oil, soap, cotton waste, &c.	500	0	0
Total ...	2,900	0	0

ABSTRACT.

	Rs.	A.	P.
Establishment	4,092	0	0
Contingencies	2,900	0	0
Total ...	6,992	0	0

The budgeted expectation was Rs. 6,150, while, as shown above, the actual receipt was only Rs. 4,600.

Fire-Brigade plant.

5. The Fire-brigade plant consists of 3 horses, 1 steam fire-engine, 4 manual fire-engines, 1 horse brake-van, 1 horse hose cart, and 1 hand hose cart.

Of this plant 1 manual fire-engine is kept at the Seebpore outpost in charge of 1 Tindal and 2 Khalasees, all the rest being at the head station, whence 1 manual fire-engine, and establishment similar to that at the Seebpore outpost, will be transferred to the Bandaghat outpost, when it is ready for occupation.

Work done by the Fire-brigade. Appendix B.

6. Appendix B shows that only seven fires were extinguished by the local Fire-brigade in 1890-91, and that the value of the property destroyed did not exceed Rs. 1,060.

These results appear insignificant with reference to the budgeted expenditure of Rs. 6,992, but in connection with them have to b considered the unknown value of the property saved, and the incalculable security assured to both life and property by the presence of the Fire-brigade, and by the excellent nature of its work, as deduced from Appendix B :—

Serial number of fire.	Duration of fire.	Interval between alarm at fire station and arrival of brigade at site of fire.	Time taken in extinguishing fire.	Interval between outbreak and arrival of brigade at site of fire.	REMARKS.
1	0H. 45M.	0H. 8M.	0H. 22M.	0H. 23M.	The third and the last column are an almost incredible record of discipline, readiness and energy.
2	6H. 0M.	0H. 25M.	5H. 30M.	0H. 30M.	
3	1H. 0M.	0H. 10M.	0H. 45M.	0H. 15M.	
4	3H. 0M.	0H. 5M.	2H. 50M.	0H. 10M.	
5	1H. 30M.	0H. 5M.	1H. 20M.	0H. 10M.	
6	0H. 30M.	0H. 10M.	0H. 15M.	0H. 15M.	
7	0H. 50M.	0H. 5M.	0H. 40M.	0H. 10M.	

Maintenance of the Fire-brigade. Appendix C.

7. The Government of Bengal in Resolution No. 282, in the Municipal Department, dated the 18th February 1891, referred the question to the Commissioners, raised by the Bengal Chamber of Commerce, regarding the equity of augmenting the Fire-brigade Fund by a contribution from the Municipal Fund.

The report of the Special Sub-Committee of Municipal Commissioners appointed to consider this question is attached as Appendix C.

U. C. MITRA,
Chairman.

APPENDIX A.

Classified list of Warehouses licensed in the Howrah Municipality during the year 1890-91.

Serial No.	Register No.	Name of Concern, Owner, Occupier, Agent, and Manager.		Situation.	Description of premises.	Annual valuation.	Amount of fees realised	Date of payment.
			I. Jute and Cotton Warehouses.			Rs.	Rs.	
1	1	Owner ...	Modoo Soodun Coondoo ...	10, Goorgoollah ghat.	4 Small warehouses.	504	50	2nd April 1890
		Occupier ...	Ditto.					
2	2	Owner ...	Messrs Burjorjee Framjee, & Co.	4 Khetter Mitter's Lane.	4 and 4-3 warehouses.	367	50	16th Ditto.
		Occupier ...	Ditto.

CALCUTTA,
18*th July* 1891.

A. B. BARNARD,
Dy. Commr. of Police.

APPENDIX C.

HOWRAH MUNICIPALITY.

Report, dated the 7th May* 1891, *of the Special Sub-Committee appointed by Resolution No.* 13 *of the* 1*st ultimo, to consider the questions referred to the Commissioners by Government in connection with the maintenance of the Fire-brigade.

ADOPTED BY RESOLUTION No. 5, DATED THE 20TH MAY 1891.

READ—

(1).—Government of Bengal Resolution, in the Municipal Department, No. 282 of the 18th February last, together with the letters and estimates accompanying it.

(2).—Report, dated the 8th March 1890, of the Special Sub-Committee appointed to consider G. O. No. M $\frac{1}{3}$4, dated the 8th idem.

(3).—Resolution No. 5 of an Ordinary General Meeting of the Commissioners held on the 18th June last.

(4).—Annual reports on the working of the Jute Warehouse Act for the years 1886-87, 1887-88, 1888-89, and 1889-90.

From the data before us it appears that during the four years commencing with 1st April 1886 and ending with 31st March 1890, there were 46 fires at Howrah representing a loss of Rs. 3,77,665, the particulars of which are as follows :—

Nature of building, industry, &c.	No of fires.	Value of property destroyed.
		Rs.
Jute and Cotton Warehouses	5	3,71,000
Depôts, &c, licensed under section 261, Act III (B.C.) of 1884	7	3,185
Houses and huts	32	2,880
Docks	1	100
Boats laden with straw	1	500
Total ...	46	3,77,665

Also, as stated in the last resolution on this subject, the Commissioners paid for years the rent and taxes of a house in the Chandmaree Road for a Fire-brigade station, and in 1889 made over for this purpose 1¼ bighas of land worth Rs. 2 per cotta per mensem.

Further, the Commissioners have just sanctioned Rs. 10 per month for the Fire-brigade station at Bandha Ghât.

Considering these circumstances, and the fact that nothing has transpired to alter the opinion last expressed by the Commissioners, we recommend that the Fire-brigade be still maintained by fees levied as heretofore under Act IV (B.C.) of 1883, and that no contribution be made towards it under section 69, Act III (B.C.) of 1884.

We, however, suggest that the Jute Warehouse Act be amended, so that docks, distilleries, baled cotton warehouses, roperies, timber yards, coal yards, traders in kerosine and other oils, and dealers in other inflammable materials, be also made to contribute towards the maintenance of the Fire-brigade.

Moreover, we quite agree with the opinion expressed in the Government letter referred to us for report, that the Port Commissioners should also be requested to contribute towards the maintenance of the Fire-brigade, and as a cogent reason for the adoption of this measure as regards Howrah, it may be urged that, while it has a river frontage as long as that of Calcutta, the Port Commissioners have no fire-engines here, as in the Metropolis, to help the local Fire-brigade.

NARA SINGHA DUTT, *Vice-Chairman*,
C. N. BANERJEE, } *Members*.
W. C. BANERJEE,

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different districts of Bengal, as reported to Government, during the week ending the 14th November, 1891.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.			
Burdwan Divn.			
1	Burdwan Nov. 14, '91 Culna ... Cutwa ... Raneegunge ...	Nil Nil 0·91 Nil	Weather—cloudy and hot for the time of year. Rain has done some good to crops in Cutwa subdivision. Sowing of *rabi* crops progressing. Prices of common rice:— Srs. Burdwan ... ... 16 Culna ... ... 14 Cutwa ... ... 14 1/8 Raneegunge ... ... 16 } per rupee.
2	Bankoora „ 14, '91	Nil	Weather—hot for the season. Rain wanted for *aman* and *rabi* crops. Harvesting of *aman* paddy continues. Sugarcane doing well. No want of fodder and water for cattle. Price of common rice steady at 15½ to 18 seers per rupee.
3	Birbhum „ 14, '91 Rampore Haut ...	Nil 1·31	Weather—clear, but only occasionally cloudy. Low land paddy in good condition; upland paddy has sustained injury from drought, but the loss is not likely to exceed, say, a fourth. Fodder and water-supply plentiful. Common rice selling at from 15 to 18 seers per rupee.
4	Midnapore „ 14, '91	Nil	Weather—seasonable, a little rain in places. *Aman* paddy suffering from want of rain. *Rabi* and indigo crops doing well. No want of fodder. Prices of common rice:— Srs. Sudder ... ... 16 Contai ... ... 18 } per rupee.
5	Hooghly „ 14, '91 Serampore ... Jehanabad ...	Nil 0·24 0·30	Weather—cool and cloudy. No rain at Sudder. There was a scanty fall in the subdivisions of Serampore and Jehanabad, which will do some good to the winter rice. No cattle-disease. Fodder-supply sufficient. Prices of common rice:— Srs. Sudder ... ... 12 Serampore ... ... 12 Jehanabad ... ... 14 } per rupee.
6	Howrah „ 14, '91 Uluberia ...	Nil 0·36	Weather—cloudy and warm. Paddy on high lands somewhat damaged; otherwise prospects favourable. *Rabi* crops being sown. Health of cattle good, except in a very limited jurisdiction. Fodder and water-supply sufficient. Price of common rice 14 seers per rupee.
Presidency Divn.			
7	24-Perghs. „ 17, '91	Nil	Weather—seasonable. *Aman* on high lands withering; on low lands it is coming into ear. Recent rain has done some good to winter crops. Prices steady. Cattle-disease reported from three villages in thana Harowa. Supply of fodder and water sufficient.
8	Nuddea „ 14, '91 Kushtea ... Meherpore ... Chuadanga ... Ranaghat ...	Nil 0·46 0·30 0·09 0·61	Weather—hot for the season. Harvesting of *aman* going on. Prospects bad. Sowing of winter crops nearly finished. Condition of cattle good. Supply of fodder and water sufficient. Common rice selling at from 12¾ seers to 14½ seers per rupee.
9	Khoolna „ 14, '91 Bagirhat ... Satkhira ...	1·22 2·28 2·75	Another heavy shower on the 12th. Weather now unsettled. Prospects of *aman* have been considerably improved by the rain, which, however, came too late for much of the paddy on high land. Fodder and water sufficient. Price of common rice 14 to 15 seers per rupee.
10	Jessore „ 14, '91 Jhenidah ... Magura ... Narail ... Bongong ...	0·54 0·27 0·46 2·11 0·44	Weather—cloudy with drizzling rain in the first part of the week. More rain wanted. *Boran* paddy in ears and *chotan* paddy being harvested. Cultivation of *rabi* crops going on. Supply of water and fodder plentiful.
11	Murshedabad „ 16, '91	Nil	Weather—seasonable. Recent rain has improved prospects of winter rice. *Rabi* sowings almost finished, and plants appear to be thriving well. Fodder for cattle sufficient. Ten heads of cattle died of small-pox in Kandi sub-division.
Chittagong Divn.			
12	Chittagong „ 17, '91	0·10	Weather—variable early in week; latterly fair. Late showers somewhat benefited standing crops. Insects reported to be damaging crops in places. Prices steady. Condition of cattle fair. Fodder sufficient.
13	Noakhally „		Report not received.
14	Tipperah „ 14, '91	0·62	Weather—cold. Recent rain has improved prospects of crops, which are fair. Fodder sufficient. Cattle-disease prevails in parts of the Chandpur sub-division.
15	Chittagong Hill Tracts. „		Report not received.

Division	No	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*					
DACCA DIVN.	16	Dacca	Nov. 14, '91	0·60	Weather—cloudy. Rain throughout the district except in Manickgunge. Prospects of *aman* good generally, although it has been partially damaged in high lands, but recent rain has done much good. *Asvin* paddy is still being cut. Fodder available. Common rice selling at from 13 to 17 seers per rupee. No cattle-disease.
	17	Furreedpore	„ 14, '91	0·05	Weather—not seasonable. Prospects of crops fair. No cattle-disease. Rice selling at 15 seers, 14 to 16 seers and 15 to 16 seers per rupee, respectively, at Sudder, Goalundo and Madaripore.
	18	Backergunge	„ 14, '91	Nil	Weather—unseasonable with cloudy sky and slight rain. Prospects of winter crops somewhat improved. Price of common rice varies from 12 to 17 seers per rupee. Supply of fodder and water sufficient.
		Perozepore	.	0·95	
		Bhola	...	0·38	
		Patuakhali	...	0·20	
	19	Mymensingh	„ 14, '91	0·02	Weather—seasonably cold and cloudy. Prospects of crops fair. Recent rain has improved winter rice to extent of 7 or 8 per cent. Supply of fodder and water sufficient. Condition of cattle good. Rice sells at 14 seers per rupee on an average.
RAJSHAHYE DIVN.	20	Dinagepore	„ 14, '91	Nil	Weather—seasonable. Prospects of winter rice continue bad. *Rabi* cultivation not yet finished. Price of rice has again risen at Sudder—12 seers per rupee. It has also risen at Thakurgaon—10 seers per rupee. Condition of cattle good. Supply of fodder and drinking water sufficient.
		Thakurgaon	...	Nil	
	21	Rajshahye	„ 14, '91	Nil	Weather—seasonable. Condition of *aman* is a little better owing to recent rainfall. Prospects of *rabi* improved. Outturn of *aman* estimated is not equal everywhere: it ranges from 10 to 2 annas according to low and high lands. Average price of common rice 12 seers per rupee. No cattle-disease reported. Supply of fodder and water ample.
		Nattore	..	1·02	
		Nowgong	...	1·90	
	22	Rungpore	„ 14, '91	Nil	Weather—bright and cool. *Aman* in ear and prospects unchanged. Mustard, potato and tobacco doing well. Price of rice 12 seers per rupee at Gaibanda, 10 seers at Nilphamari, 9½ seers at Kurigram, and 10½ seers at Sudder. Fodder plentiful.
		Gaibanda	...	0·46	
		Kurigram	...	Nil	
		Nilphamari	...	Nil	
	23	Bogra	„ 14, '91	3·55	Mornings cloudy; weather slightly warmer this week. Prospects of *aman* paddy improved by the recent rain. All *rabi* crops greatly benefited by it. Average price of common rice 14 seers per rupee. Ample supply of fodder.
		Sherpur	...	1·79	
		Nowkhilla	...	1·96	
	24	Pubna	„ 14, '91	0·12	Weather—seasonable. *Aman* paddy is being reaped in some places. *Rabi* crops doing well. Condition of cattle good; supply of fodder and water sufficient. Common rice selling at 13 seers per rupee.
	25	Darjeeling	„ 14, '91	Nil	Weather—fair. Sowing of *rabi* completed. *Aghani* rice and *bara marua* getting ripe. Prices of common rice:— Srs. Silliguri ... ... 11 Kurseong ... ... 10 Kalimpong ... ... 9 Pulbazar ... ... 11 Jore Bungalow ... ... 10 Nagri ... . 8 Sonadah ... ... 10 Darjeeling ... ... 9 } per rupee.
	26	Julpigoree	„ 14, '91	Nil	Weather—seasonable. Prospects of *haimanti* crop not good. Rain much wanted. *Rabi* crops doing well. Rice sells at 10 seers per rupee. Fodder and water-supply sufficient. No cattle-disease.
BEHAR.					
BHAGULPORE DIVN.	27	Monghyr	„ 14, '91	Nil	Weather—bright and pleasant. Outturn of winter rice crop expected to be two annas. Prospect of poppy not favourable for want of rain. Fodder sufficient. No cattle-disease. Price of common rice 11 to 15 seers per rupee.
		Beguserai	...	Nil	
		Jamui	..	Nil	
	28	Bhagulpore	„ 14, '91	Nil	Weather—days warm for the season, nights cool. Rain very badly wanted throughout the district. Prospects of *aghani* rice very unfavourable. *Tori* oil-seed not doing well at Madhepura. *Rabi* crops not very bad, though more rain wanted. Fodder plentiful.
	29	Purneah	„ 14, '91	Nil	Weather—mornings and evenings cool, but days hot. Prospects of winter rice continue unfavourable everywhere. *Rabi* sowings in progress in the Sudder sub-division, but a good crop is not expected. In Arrareah and Kishengunge *rabi* prospects continue good. Prices of coarse rice from 9 to 11 seers per rupee, with a tendency to rise. Tobacco doing well. Fodder and water plentiful. No cattle-disease.
		Kishengunge	...	Nil	
		Arrareah	...	Nil	
	30	Maldah	„ 14, '91	Nil	Weather—fine and cool. Winter rice on high lands in thana Gomastapur appears to have benefited slightly by the recent rainfall. Prospect of *kalai* continues favourable. *Rabi* sowings still going on in some parts. No want of fodder or water. Common rice sells at from 12 to 17 seers per rupee. Condition of cattle good.
		Chanchal	...	Nil	
		Shibgunge	...	Nil	
		Gajole	...	Nil	
	31	Sonthal Perghs.	„ 14, 91	Nil	Weather—cool at night, but still hot in day; cloudy for the last two days. Cutting of winter rice commenced. About half the rice on high lands dead, but on low lands it is good, especially in the Dumka subdivision, where the outturn is expected to be nearly the average. In Jamtara the outturn will be about 13 to 14 annas, and in Deoghur and Godda about 10 to 11 annas. Taking the district as a whole the yield will be from 10 to 14 annas. No signs of distress anywhere. Price of common rice at Dumka 16 seers per rupee. Fodder and water-supply sufficient.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
	BEHAR—(concld.)		
	Patna Division.		
32	Patna Nov. 14, '91 Barh ... Behar ... Dinapore ... Hilsa ...	Nil Nil Nil Nil Nil	Weather—hot, but cool at night. Rain urgently needed for *rabi*. Rice crop has suffered much for want of rain. Poppy sowings in progress. Prices generally stationary except in the Barh subdivision, where they are reported to be slightly rising.
33	Gya " 14, '91	Nil	Weather—fair and cold. Want of rain much felt for *rabi* sowings, which are progressing slowly. Prices of food-grains almost stationary. Supply of fodder and water for cattle yet sufficient.
34	Shahabad " 14, '91 Buxar ... Bhabuah ... Sasseram ...	Nil Nil Nil Nil	Weather—warmer than last week, with light westerly breezes. Paddy is being harvested with excellent results in the protected tracts. Elsewhere it has been cut for fodder, and the area sown with *rabi* crops. These crops are on the whole doing well, but damage from insects reported from Sasseram and Bhabuah. Prices rising in the west of the district. Supply of fodder sufficient.
35	Durbhunga " 14, '91	Nil	Weather—getting cool. Upland paddy all being cut for fodder. Rain urgently wanted for *rabi* crops. Seed sown has mostly germinated, but young plants will die if no rain falls in places when irrigation is not available. Prices rising. Water and fodder still plentiful for cattle.
36	Mozufferpore " 14, '91 Sitamarhi ... Hajipore ...	Nil Nil Nil	Weather—clear. Rain urgently wanted for rice and *rabi* crops and for poppy sowings. Prices of food-grains stationary. Sowings of wheat, mustard, linseed, poppy and castor in Sitamarhi subdivision going on. Condition of cattle good, and no scarcity of fodder and water reported.
37	Sarun " 14, '91	Nil	Weather—bright; cold at night. *Rabi* sowings going on, but require rain. Poppy sowings commenced, having been delayed a week by dry weather. Supply of fodder and water for cattle sufficient. Price of common rice 13 seers per rupee at Sudder, 14 seers at Gopalgunge, and 16 seers at Sewan.
38	Chumparun " 14, '91	Nil	Weather—seasonable. *Rabi* being sown. Prospects of standing crops fair except in thana Kessariah. Supply of water and fodder for cattle plentiful.
	ORISSA.		
	Orissa Division.		
39	Cuttack " 14, '91	Nil	Weather—cool and seasonable. The rain accompanying the cyclone of 4th and 5th instant put the crops generally out of danger. The high wind did much damage in the littoral tracts in the south-east of the district where the cyclone was most violent. Houses, trees and crops all suffered; many cattle and some human beings perished chiefly from falling in of houses. The estimated damage there to *laghu sarad* is 4 to 6 annas, and that to *guru sarad* about 4 annas, and to *rabi* crops about 8 annas. Common rice at head-quarters sells at 14 seers 7 chittacks per rupee, and in the south-east of the district the highest price is 15 seers 12 chittacks per rupee.
40	Pooree " 12, '91 Khurda ... Banpur ...	Nil 3·68 1·50	Weather—seasonable. *Laghu* ripening. *Sarad* coming into ear. Storm and rain of last week believed to have done good, though it has damaged the crops that were ripe or in blossom. Common rice sells at from 14 seers 7 chittacks to 24 seers per rupee.
41	Balasore " 14, '91	Nil	Weather—seasonable. Winter rice has been much benefited by the last rain. Prospects good. Rice sells at 19 seers per rupee at Balasore, and 20 seers at Bhadruck.
	CHOTA NAGPORE		
	South-West Frontier Agency.		
42	Hazaribagh Nov. 14, '91 Giridih ...	Nil Nil	Weather—seasonable. Harvesting of paddy continues. *Rabi* sowings going on. Poppy has been sown. Common rice selling at 15 seers per rupee. Water and fodder-supply sufficient.
43	Lohardugga " 14, '91 Palamow (up to 9th) ...	Nil Nil	Weather—a little cloudy. Rain badly wanted for *rabi* crops. Harvesting of winter rice commenced here and there. Price of common rice 16 seers per rupee. Ample fodder and water for cattle.
44	Singbhoom " 14, '91	Nil	Weather—seasonable. Prospects good. Paddy crops being reaped with satisfactory outturn.
45	Manbhoom " 14, '91 Govindpore ...	Nil Nil	Weather—dry and cool. High land paddy has suffered much from scanty rainfall. Other crops doing fairly well. Rice selling at from 12 to 18 seers per rupee.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last [illegible] The humidity of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least a tenth of an inch fell.

[f]or the week ending Saturday, the 14th of November 1891.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	District observations. Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 16th October 1891. Mean for district.	Since 16th October 1891. Normal mean.	Since 16th October 1891. Variation.	Of week. Average number of rainy days.	Of week. Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—......indicate that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any o[f] the returns are wanting, the corresponding spaces in the total rainfall columns are left blank. With reference to the column of rainy days, the definition of a rainy da[y] is when at least 0·1 inch of rain has fallen.

CALCUTTA, *the* 17*th November* 1891.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING 8 A.M., SATURDAY, THE 14TH OF NOVEMBER 1891.
